

Health Facts for you

Fiber

What is fiber?

Fiber is a part of plant food that has many health benefits.

What does fiber do?

It depends on the type of fiber. There are two types:

- Insoluble fiber or "roughage," is found in fruit and vegetable skins, whole wheat products, brown rice, barley, popcorn, quinoa, and wheat bran. This type of fiber acts as a laxative and adds bulk to stool. This helps relieve constipation and prevent colon disease and hemorrhoids.
- Soluble fiber is found in most fruits and vegetables, and barley, oatmeal, oat bran, and dried peas and beans (legumes). It attracts water and forms a gel, which slows down digestion. This helps improve blood sugar and cholesterol levels.

Most foods have some of both types of fiber, but the amounts vary.

Fiber can help you lose weight. The added bulk helps you feel full. Foods with fiber take longer to chew, which helps slow the pace of eating.

Do I need to take a fiber supplement?

Eating many kinds of fiber rich foods each day should provide you with enough fiber. If you cannot eat enough fiber or you have more complex health issues, your health care provider may suggest a fiber pill or powder. Never start a supplement without telling your health care provider first.

How much fiber should I eat?

Your health care provider will tell you how much fiber you need. See the table below to see the suggested fiber intake by age.

Gender	Age	Suggested Intake
	(years)	in grams (g)
Women	19-50	25
	50+	21
Men	19-50	38
	50+	30

Aim for at least 5 servings of vegetables and fruits and at least 3 servings of whole grains each day. You may need to adjust your fiber intake based on your health history.

Increase the amount of fiber in your diet slowly. This slow increase prevents stomach aches, bloating, gas, constipation and diarrhea. Fiber and water work together, so drink 8-10 (8 ounce) glasses of fluids daily.

Compare these two meal plans. Which one is most like your diet?

Menu Low in Fiber	Menu High in Fiber	
Breakfast	Breakfast	
Orange juice	Fresh whole orange	
Scrambled eggs	Scrambled eggs	
White toast	100% whole wheat	
Milk	toast	
	Milk	
Lunch	Lunch	
Tomato soup	Minestrone soup	
½ tuna salad on white	½ tuna salad on 100%	
bread	whole wheat bread	
Milk	Milk	
Dinner	Dinner	
Baked chicken with	Chicken/broccoli stir-	
noodles	fry with brown rice	
Green beans	Salad	
Butterscotch pudding	Fresh fruit salad	
Milk	Milk	

Fruits

Fruits are grouped by amount of fiber per serving. The serving size is ½ cup unless noted.

At Least 4 Grams per Serving (fiber rich)

Pear, medium, unpeeled	5.5
Apple, large, unpeeled	5.4
Avocado, raw, cubed	5.0
Dates, 3 dried	4.8
Raspberries	4.0

3.0 - 3.9 Grams per Serving

Blackberries	3.8
Orange, 1 medium	3.8
Prunes, 5 dried	3.5
Banana (8-3/4" long)	3.5
Raisins, packed	3.1

1.0 – 2.9 Grams per Serving

1.0 - 2.7 Orams per serving	5
Apricots, 4 halves	1.2
Strawberries	1.5
Peach, peeled	2.2
Cherries, sweet	1.5
Mango	1.5
Applesauce, cooked	1.5
Tangerine, 1 medium	1.5
Nectarine, 2-1/2"	1.6
Pears, 2 peeled halves	1.7
Kiwi, sliced	2.7

Under 1 Gram per Serving

Fruit juices	0.2
Mandarin oranges	0.9
Watermelon	0.3
Grapefruit sections	0.4
Olives, 5 green or black	0.4
Honeydew melon	0.5
Grapes, green or red	0.5
Cantaloupe	0.6
Pineapple	0.7
Fruit cocktail, canned	0.9

Vegetables

Vegetables are grouped by the amount of fiber in a serving. A serving size is ½ cup of fresh vegetables unless noted.

Note: Cooked vegetables often shrink so there are more in a ½ cup cooked portion than a ½ cup raw portion. Therefore, a ½ cup cooked vegetables likely has more fiber than ½ cup raw. Cooking does not decrease the fiber content of a food.

At Least 4 Grams per Serving

Lima beans	6.6
Kidney beans	5.7
Potato with skin, large	4.6
Green peas	4.4
Edamame	4.0

3.0 - 3.9 Grams per Serving

	•
Artichokes	3.8
Sweet potato, peeled, med	3.8
Butternut squash	3.3
Parsnip	3.2
Beets, canned	3.0

1.0-2.9 Grams per Serving

1.0-2.5 Grams per Serving		
Broccoli	2.6	
Rhubarb, cooked	2.4	
Mix veg, canned	2.3	
Spinach, cooked	2.2	
Tomato, 2"	2.2	
Carrot, 1 large	2.0	
Green beans	2.0	
Mushrooms, canned	1.9	
Asparagus	1.8	
Cauliflower, cooked	1.4	
Onions, sliced	1.4	
Cabbage, cooked	1.4	
Spinach, 2 cups raw	1.3	

Vegetables Continued

Common Grains and Nuts

The nutrition facts on food labels will list fiber content. Look for the words "100% whole-grain" to find higher fiber food sources.

Almonds 1/4 cup	3.5
Wheat bran 2 Tbsp	3.0
Barley, cooked	3.0
Peanuts 1/4 cup	3.0
Buckwheat, cooked	2.3
Oatmeal, cooked	2.0
Quinoa, cooked	2.6
Pumpkin seeds 3 Tbsp	2.0
Brown rice, cooked	1.8
Wild rice, cooked	1.5

More Information

Processed fiber is now being added to many foods to improve the nutrition content of food and attract customers. Foods that naturally contain fiber provide better health benefits. Therefore, we suggest a diet with more legumes, whole grains, fruits and vegetables.

Appearance, texture, or color does not reveal the fiber content of foods. For instance, ½ cup avocado (which has a very smooth texture) contains 5 grams of fiber, while ½ cup of cabbage has less than 1.4 grams. Food labels are a good resource to find out the fiber content. Blending or pureeing foods does not change fiber contents, though juice does not contain fiber.
