

BABY AND TODDLER SHOE SIZE CHART

Use this printable guide to find the correct shoe size for your little one:

1

PRINT
Print this page on a regular 8.5" x 11" piece of paper at 100% scale (full size). Check for print accuracy using the credit card measurement below.

2

STEP
Place this chart on the ground on a flat, solid surface (not plush carpet or rugs, grass or other textured surfaces). Have your child stand and place their bare foot on the chart, aligning their heel with the heel marker at the bottom. Make sure their toes are relaxed, not curled under.

3

MARK & MEASURE
Using a pen or pencil, mark horizontally where your child's longest toe lands. Mark all the way to the inches ruler on the side; since shoe sizes can vary across different brands, it's more accurate to check your child's shoe size according to inches and compare that to each brand's size guide.

PRINT ACCURACY CHECK

To make sure this chart is printed correctly, a credit card should fit perfectly in this box.

*Be sure to measure both feet in case there's a size difference. If one foot is larger than the other, buy shoes to fit the larger size.
