NyBucks Results Presentation.

Full Year Results 2018

Salient features.

- Operating profit improved by 26% year-on-year.
- funding, and a stable cost to revenue ratio.
- Uganda.
- Africa's impairment charge due to external factors.
- February 2018.
- to be seen in future periods particularly around customer experience.

Loss after tax improved as a result of increased revenues, improved impairment to revenue, reduced cost of

Revenue increased by EUR 5.5m to EUR 61.3m predominantly driven by South Africa, Mozambique and

The impairment to revenue has improved from 22% to 19% notwithstanding a significant increase in South

The cost of funding improved by five percentage points on the back of a capital raise of EUR 11.5m in

Cost to revenue ratio remained stable, operating costs will be a key focus area of the business going forward.

The business has continued to improve it's Artificial Intelligence capabilities, the full impact which is expected

Executive Chairman's comments.

to both loan book growth and profitability in the near term.

MyBucks has managed to build on the foundation of a scalable group platform positioning it to become Africa's leading digital bank. We continue to follow our strategy to grow the business through organic growth in existing and new markets, acquisitions, franchising models, joint venture models and global business-to-business tech offerings.

"The group withstood challenging economic conditions as our investments in technology, human capital and sound business fundamentals have paid off. I am pleased with the growth in our loan book and disbursements in the past 12 months and happy to report that the business is stable. The past year has been a period of consolidation, we have turned the lens inwards to heighten our competitiveness and efficiency and standardise business systems, as well as the banking platforms, throughout the group. Having proven that the group can generate economies of scale and significantly improve impairment charges through technology, I believe MyBucks is on the right track

- Dave Van Niekerk, Executive Chairman

Hybrid MyBucks overview

Company overview.

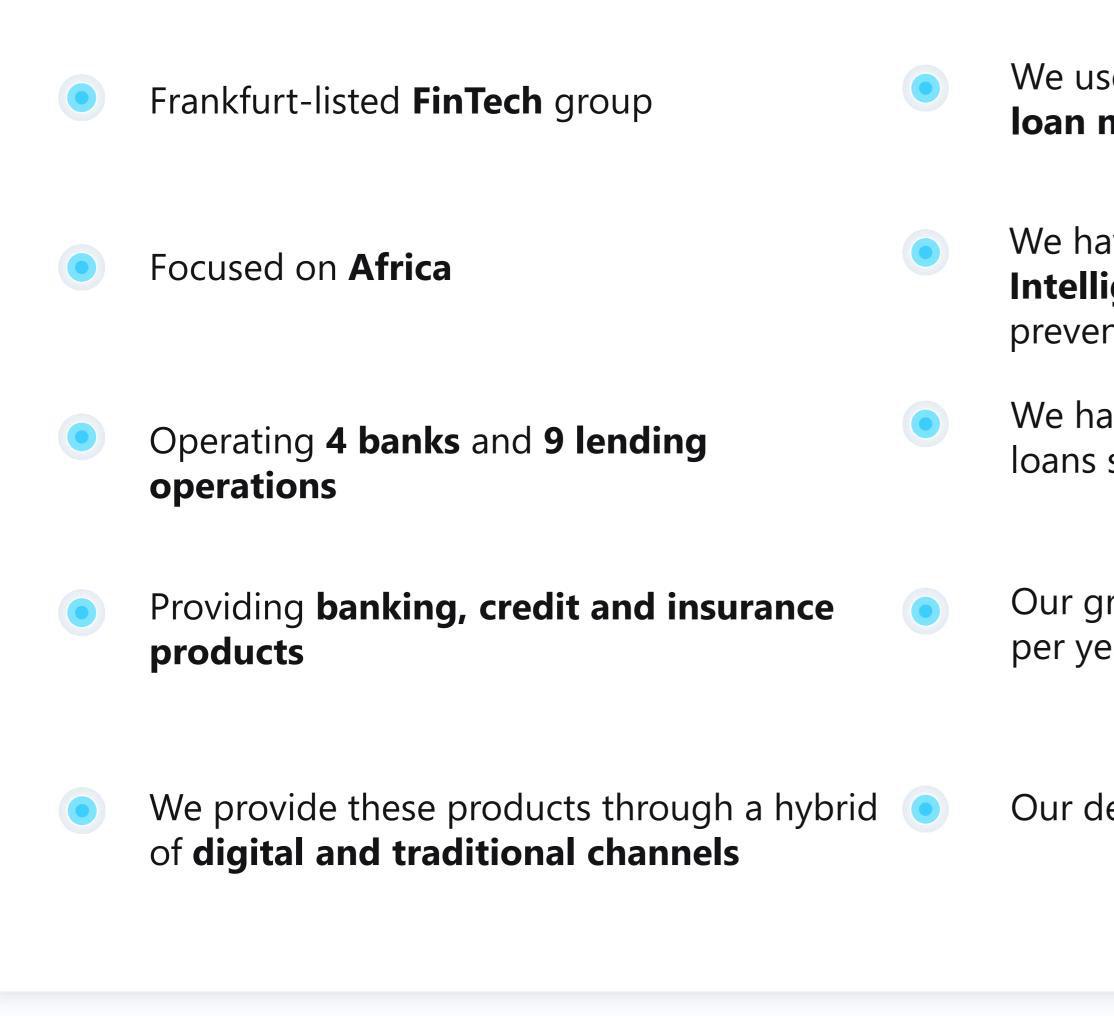

MyBucks highlights.

We use our own internal developed loan management system

We have developed our own **Artificial Intelligence (A.I) algorithms** for fraud prevention, credit scoring and collections

We have disbursed **c.EUR 500 million** in loans since inception

Our gross loan book has grown at c.38% per year, to **c.EUR 100 million**

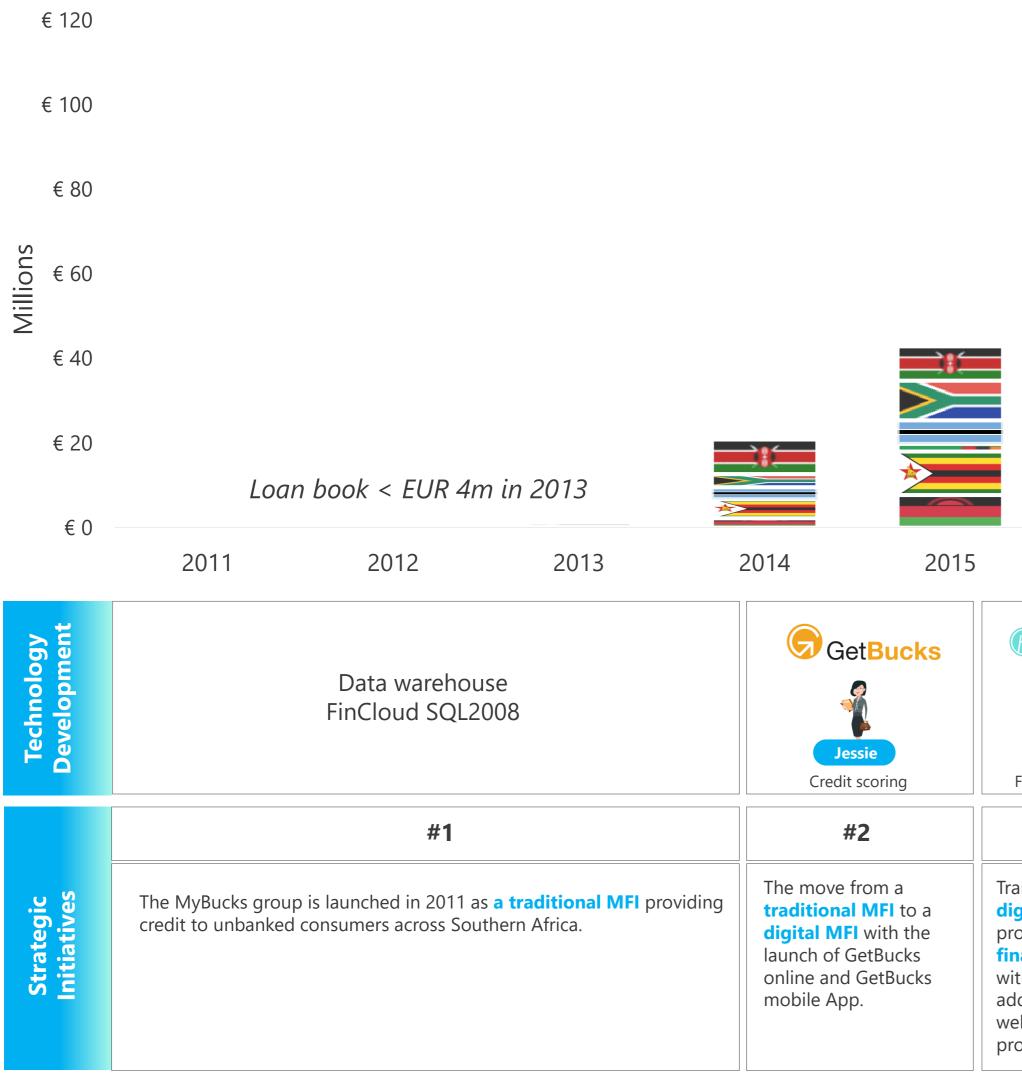

Our default rate has been stable at 7.1%

Evolution of the group.

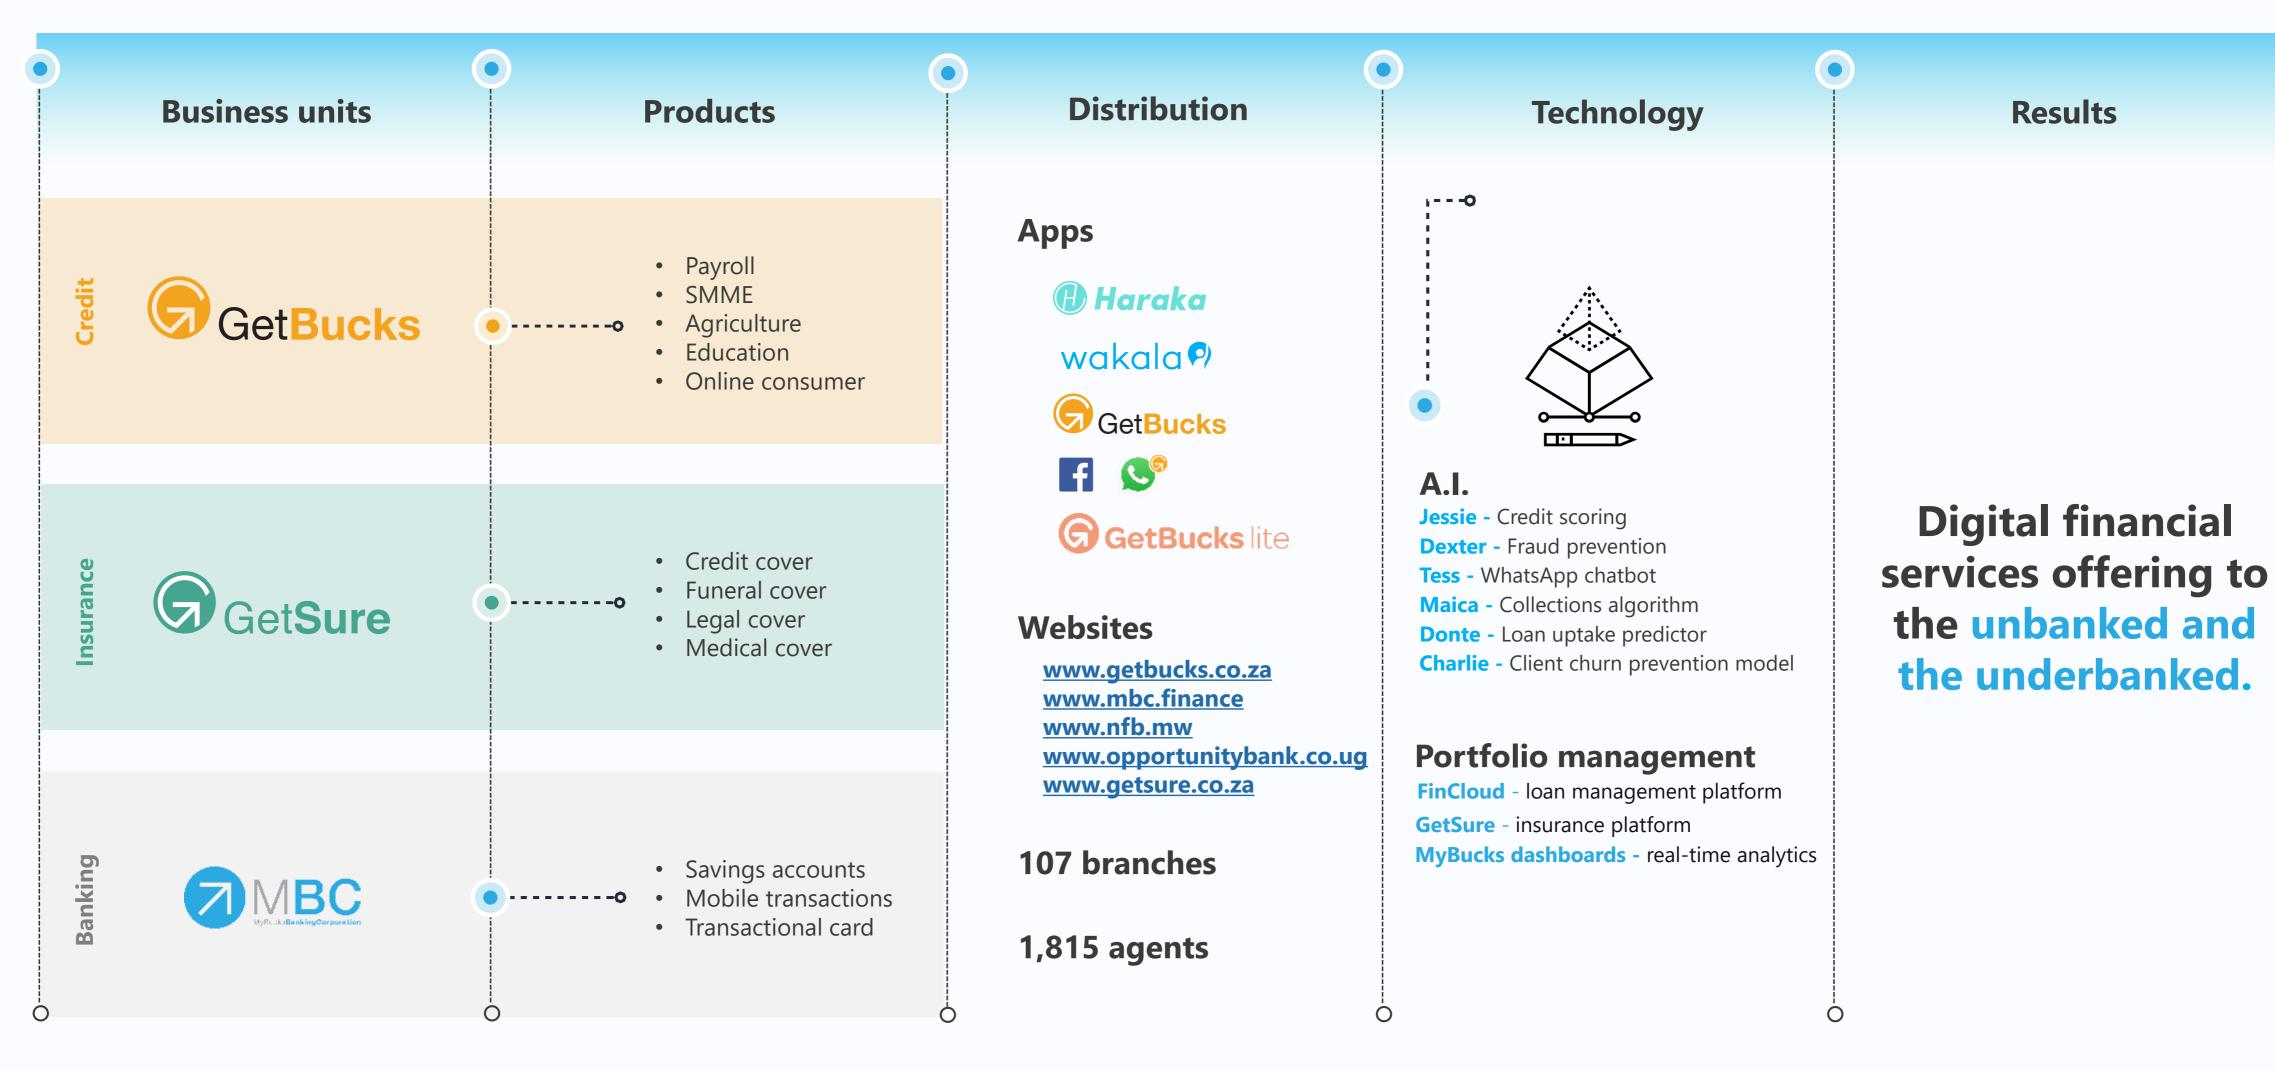

| 2016 | | | MyBucks has grown to 13 countries, obtained 4 banking licenses, developed 5 apps and 6 A.I. personalities, and provided more than 2 million loans in less than 7 years. | |
|---|---|--|--|--|
| Haraka | wakala wakala | | cslite Continuous development | |
| #3 | #4 | | #5 | |
| Transition from a digital MFI to provide digital financial services, with the launch of additional Apps as well as insurance products. | The MyBucks group expands our Banking license presence to 5 Countries as part of an effort to access cheaper forms of funding (customer deposits, inter- bank rates, etc.) | MyBucks continues to expand operations globally, assessing new opportunities in both new and existing territories. Key to this growth is laying a solid foundation in existing territories – fundamental to this is a stable and long term capital structure. MyBucks will continue to raise capital in local markets, and IPO our existing operations in their primary markets to ensure our interests are aligned with the local investors and stakeholders. | | |

Notes: 1. Other income includes share of profit in joint venture (NFB) of EUR 530,173 in 2018.

MyBucks has created an optimal operational base

- Revenue increased 10% during 2018.
- The provisions to gross loan book ratio reduced from 20.2% to 10.9% on the back of improved loan book quality. Group loan impairment charges remained flat while the impairment to revenue has improved from 22% to 19%. This is notwithstanding a 114% increase in South Africa's impairment charges, which contributed 63% of the group's total impairment charges. The latter was predominantly driven by a change in the debit order dispute mechanism of banks in South Africa. Counter measures are being discussed by various South African regulators.
- The operational model of MyBucks is now established, the cost to revenue ratio has remained constant and there is capacity to grow the business significantly through economies of scale with minimal incremental operating costs (small variable cost component).
- Operating profit increased by 26% to EUR 14.4m 4.
- Cost of funding reduced substantially from 24.2% to 19.1% at the respective year end.
- Loss after tax improved as a result of increased revenues, 6. reduced impairment costs, a relatively stable operating expense base and reduced cost of funding.
- Capital (borrowings, deposits and equity) increased by EUR 26m of which EUR 17m was deployed in new loan book, EUR 5m was utilised for the acquisition of NFB (Malawi), EUR 3m for the acquisition of new PPE, EUR 3m was deployed in new working capital, and resulted in a EUR 2m decrease in cash.

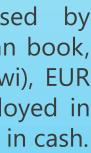

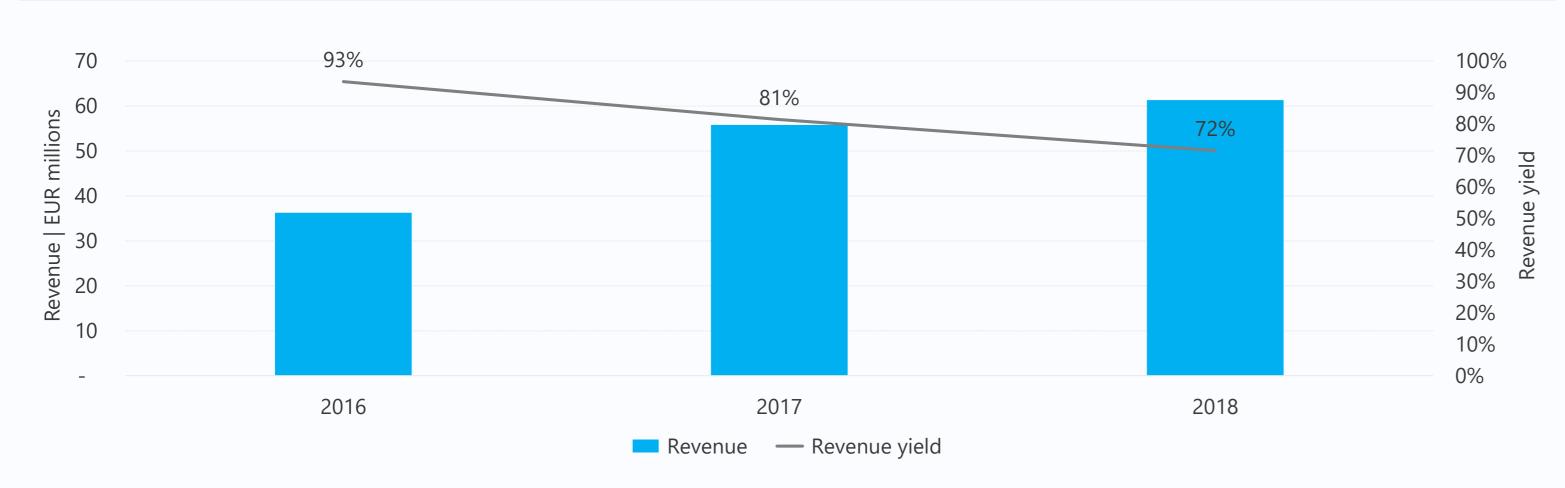

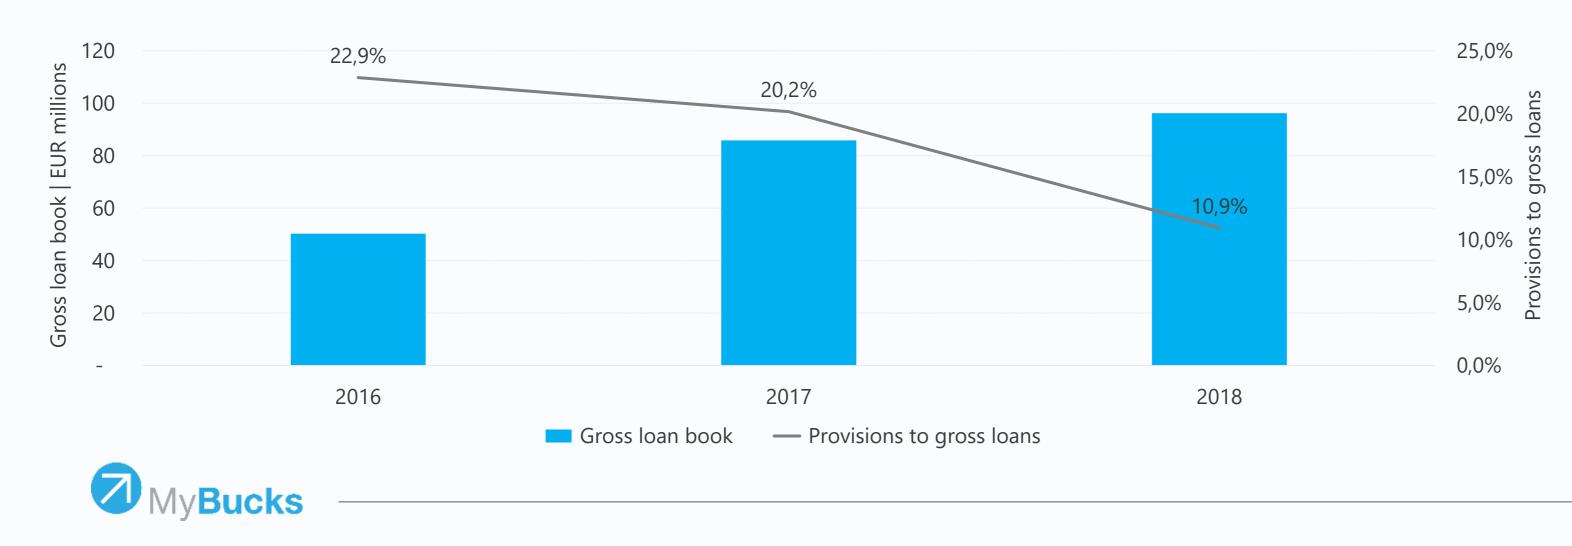

MyBucks financial results. Revenue & provisions

Gross loan book vs provision to gross loans

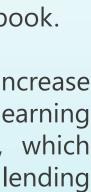

Commentary:

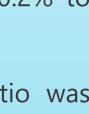

- Revenue increased 10% on the back of a larger loan book.
- However, revenue yield decreased as a result of the increase in the proportion of the contribution of interest earning assets by the banking operations to the group, which generate lower interest yields compared to the lending operations.

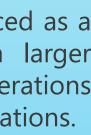

Commentary:

- The provisions to loan book ratio reduced from 20.2% to 10.9%.
- The reduction in the provisions to loan book ratio was achieved owing to the increased loan book quality and the implementation of MyBucks A.I.
- The provisions to loan book ratio, was further reduced as a result of the banking operations contributing a larger proportion of the group loan book. The banking operations have better quality loan books than the lending operations.

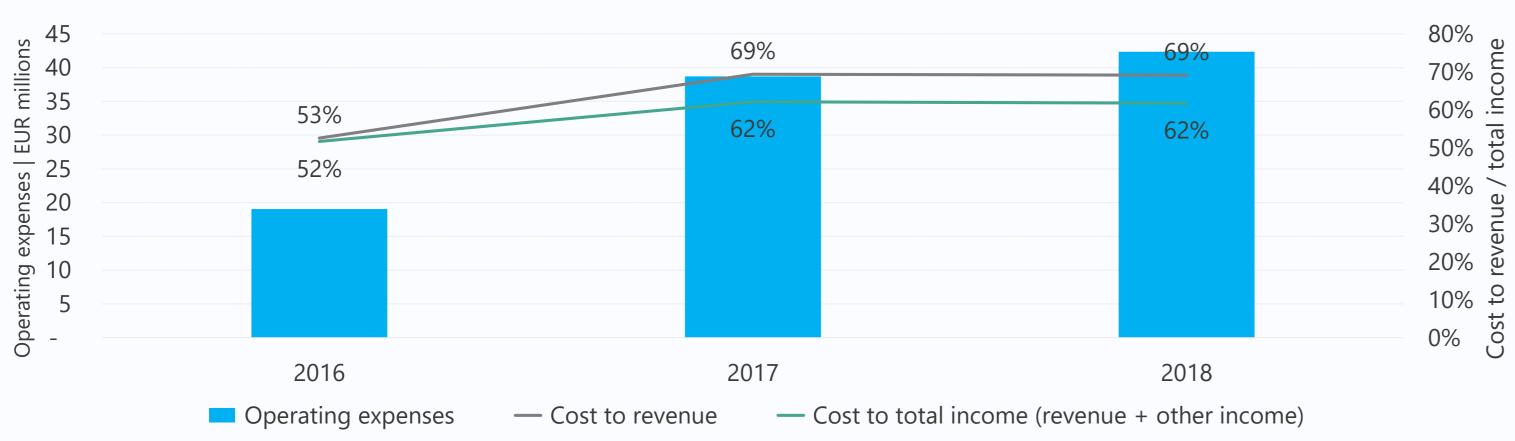

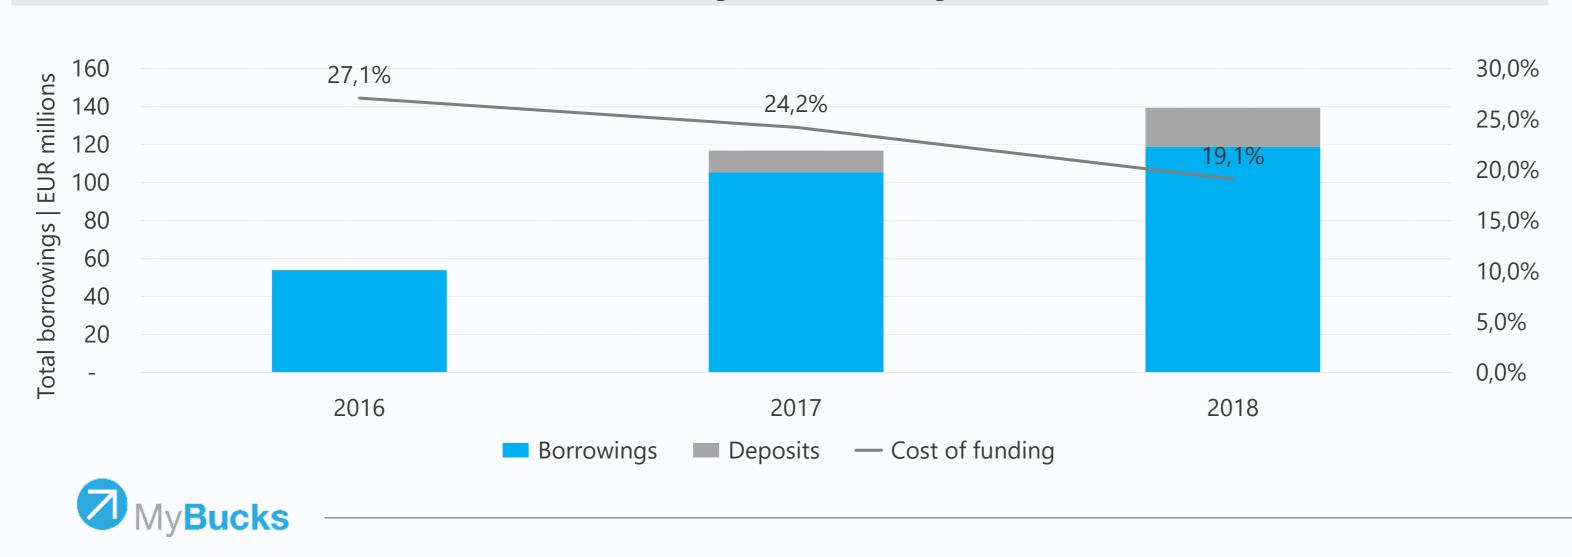

Operating expenses vs cost to revenue

Borrowings vs cost of funding

MyBucks financial results.

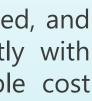

Operating expenses & funding costs

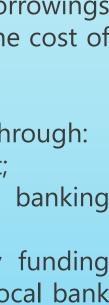

Commentary:

- Operating expenses stabilised.
- The operational model of MyBucks is now established, and there is capacity to grow the business significantly with minimal incremental operating costs (small variable cost component).

- Finance cost increased by EUR 1.4m whilst borrowings increased by EUR 23.5m, which saw a reduction in the cost of funding from 24.2% to 19.1%.
- The reduction in cost of funding has been achieved through:
 - the group's focus on refinancing expensive debt;
 - the group's success in raising deposits in its banking operations; and
 - the group's success in raising local currency funding III. through operational level bond programmes, local bank facilities and other initiatives.

| | Return on equity | 22.9% | 6 35.9% | | | (30.0%) |
| | Equity to assets | 37.4% | 19.7% | | | 13.7% |

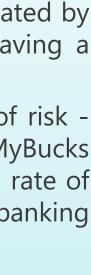

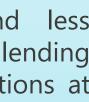

Notes:

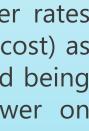

- 1. Other income includes share of profit in joint venture (NFB) of EUR 530,173 under Tech and HQ.
- 2. Ratios in the Segmental Analysis section calculated using end of period balances.

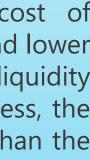

- The majority of the group's revenue (65.8%) is generated by the lending segment, primarily as a resulting of having a portfolio of higher yielding products.
- The higher yield is accompanied by a higher level of risk -2. the lending segment contributed 92.6% of MyBucks impairments in 2018 at an impairment to gross loan rate of 23.2% against a similar measure of 1.8% for the banking segment.
- It should be noted that most of the impairments were 3. isolated primarily South Africa (EUR 7.4m).
- With relatively lower branch infrastructure and less 4. regulatory requirements, the cost to revenue of the lending operations is much lower than the banking operations at 45.4% against 63.3%.
- The banking segment raises funding at much lower rates 5. than the lending segment (13.7% vs 23.4% funding cost) as a result of their ability to raise low cost deposits, and being regulated institutions, perceived risk is priced lower on borrowing.
- Notwithstanding the banking segments' lower cost of 6. funding, a combination of greater cost efficiencies and lower costs of compliance (capital requirements, liquidity requirements, etc.), at the current scale of the business, the lending operations provide a higher ROE at 35.9% than the banking institutions of 22.9%.

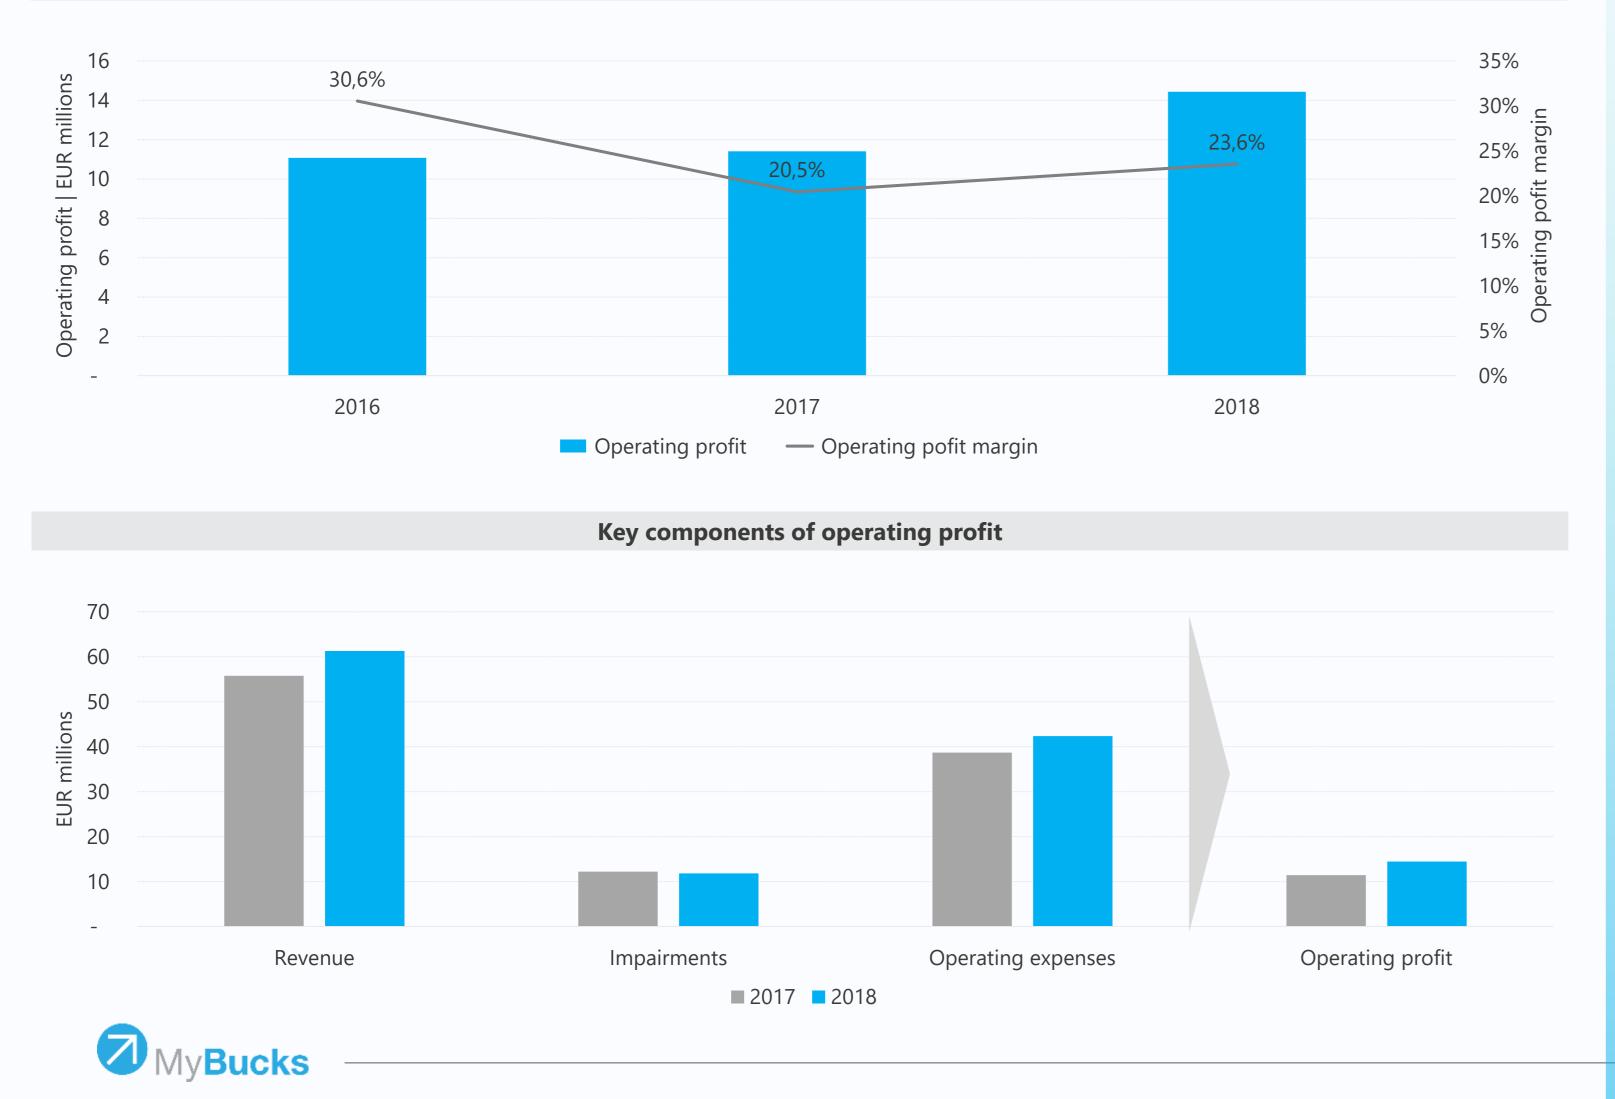

MyBucks financial results. Operating profit

Commentary:

- Operating profit increase by EUR 3m, an increase of 27% from the previous period.
- The increase in operating profit was achieved through increased revenues, reduced impairment costs and relatively stable operating expense base.
- Operating profit margin increases to 23.6%.

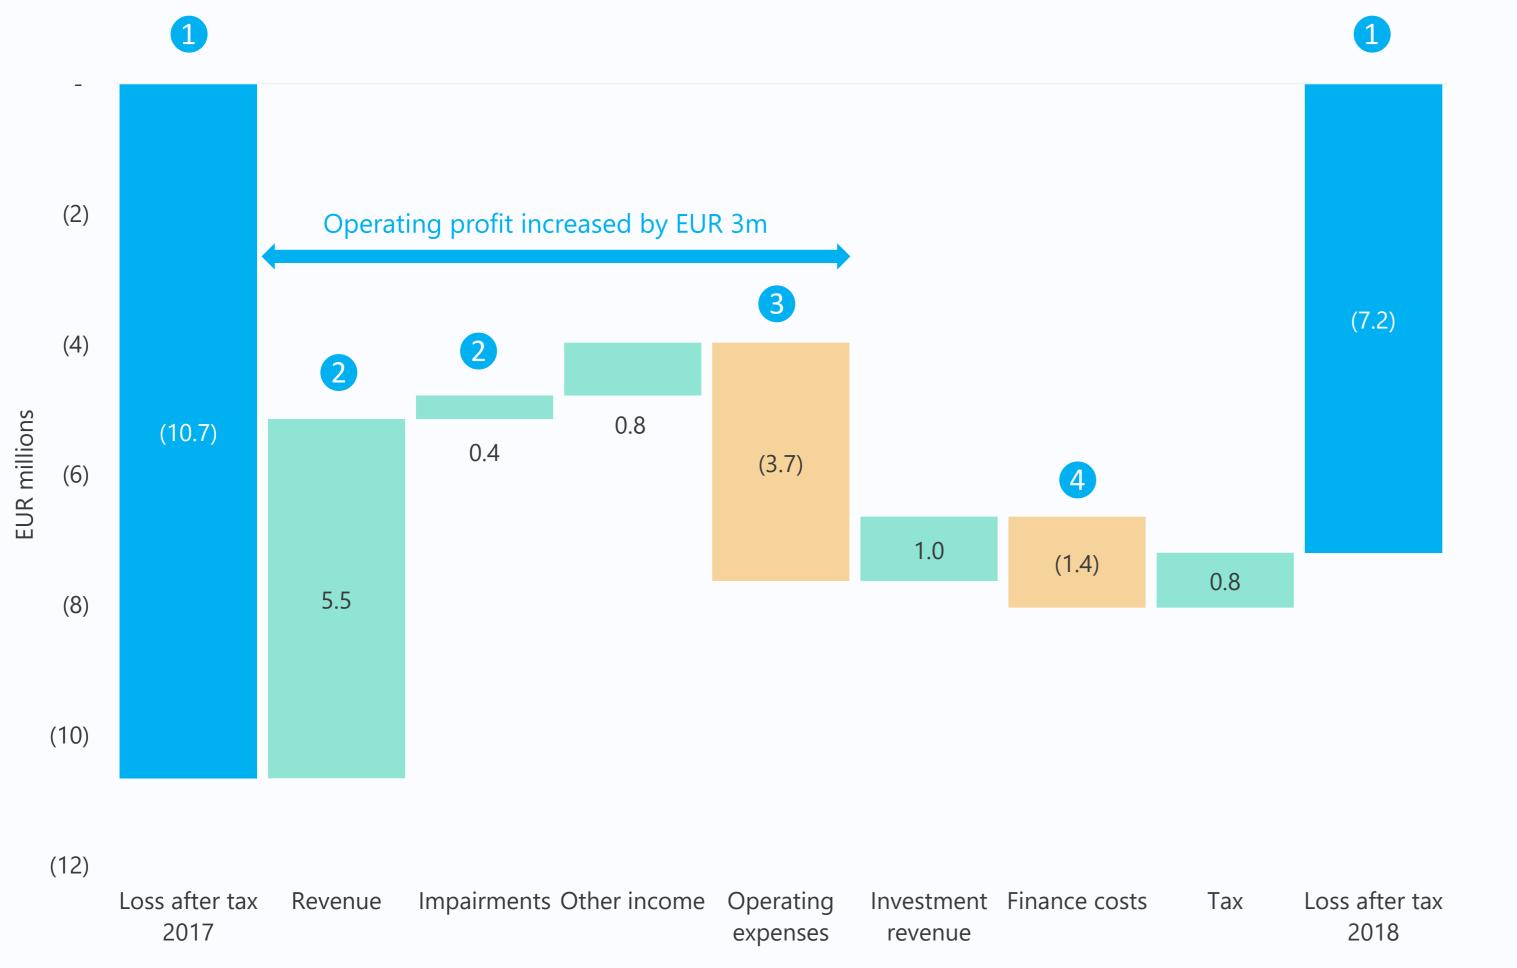

With the stabilisation of operating expenses and improvement in the provision to loan book ratio, MyBucks is well positioned to benefit from operational efficiencies to grow the business and increase profitability.

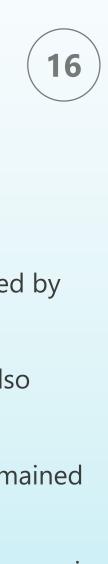

Earnings waterfall. 2018 vs 2017 analysis

- Loss after tax from continuing operations improved by 1. EUR 3.5m to a loss of EUR 7.2m in 2018.
- MyBucks increased revenue by EUR 5.5m whilst also 2. reducing the impairment charges by EUR 0.4m.
- Operating expense increased by EUR 3.7m but remained 3. stable at 69% of revenue.
- Finance cost increased by EUR 1.4m, whilst total borrowing 4. increased by EUR 20m, resulting in a reduction of finance cost by c. 5%.

Overview & strategic objectives.

Situation as of end of June 2018:

| \checkmark |
|--------------|
|--------------|

Net interest margin of c.52%.

Reduction of provisions by implementing A.I.

Focus on reducing cost levels.

Cost of funding reduced by 5% in the last financial year. Further efficiencies expected.

Restructuring of acquired entities finalised and all continuing operations expected to be profitable in future periods.

Future strategic objectives:

Optimising the group's tax structure.
