

Cambridge courseware (CogBooks) Instructor Guide

Course Customization

This guide will cover how to use the course customization function within Cambridge courseware (formerly CogBooks). It will review how to do three of the most common edits: text, images, and videos. It's very important to note, all customizations must be done BEFORE the course is published and started. The function will automatically be disabled once the first student accesses the course.

Step 1 – Open the assignment you want to customize. At the top of each Topic, Sub-Topic, and Learning Activity page, there will be a "Customize" button. Pushing it will allow you to edit the content on that specific page.

Step 2 – Customize the Topic and Sub-Topic pages. Most things on these pages can be edited and customized.

- Rename or rearrange the order of topics.
- To edit Sub-Topics, click "View & Edit" to the right of the desired Topic.

- Edit the introduction
- Create a New Topic

		from your learning management system and displayed. Please edit the link or assignment name in your learning management system and the title will automatically get update ogbooks.freshdesk.com for further help	d on this page. Please

		Create a new topic	

Step 3 – Customize a Learning Activity page. The customization functions allow you to edit any learning activity page within each subtopic.

a) Once on a learning activities page you want to edit, click the customize button on the top-right part of the page.

Axial Muscles of the Head, Neck and Back

1 of 8 goals completed	Customize
Axial Muscles of the Head, Neck, and Back Critical Thinking: Axial vs Appendicular Muscles Feedback to Critical Thinking: Axial vs Appendicul	Muscles are either axial muscles or appendicular. The axial muscles are grouped based on location, function, or both. Some axial muscles cross over to the appendicular skeleton. The muscles of the head and neck are all axial. The muscles in the face create facial expression by inserting into the skin rather than onto bone.
Critical Thinking: Muscles of the Anterior Neck. Feedback to Critical Thinking: Muscles of the Anterior Critical Thinking: Muscles of the Face	Muscles that move the eyeballs are extrinsic, meaning they originate outside of the eye and insert onto it. Tongue muscles are both extrinsic and intrinsic. The genioglossus depresses the tongue and moves it anteriorly: the styloglossus lifts the tongue and retracts it the palatoglossus elves the back of the tongue; and the hyoglossus depresses and flattens it. The muscles of the

b) The initial page will let you edit the image and learning activity name, click the "Edit Content" button.

	Muscles are either axial muscles or appendicular. The axial muscles are grouped based on location, function, or both. Some axial muscles cross over to the appendicular skeleton. The muscles of the head and neck ser all axial. The muscles in the face create facial expression by inserting into the skin rather than onto bone. Muscles that move the eyebalis are extinsic, meaning they originate outside of the eye and insert onto it. Tongue muscles are both extrinsic. The genicalossus depresses the tongue and moves it anteriorly; the styloglossus lifts the tongue and retracts it: the nalstoolences elevates the back of the tongue and the hypologue depresses and

- c) The current version of the learning page is the "master" and cannot be modified. A new unique version must be created. You will have two options when creating a new version.
 - The recommended method is to copy the default to create a new version that can be edited.
 - The other option is to create a 100% new version with completely new content.

Editing the Current Version

- a) To utilize the copy function, simply click the copy button under the current version and then click the "**Create a new version**" that can be edited.
- b) Then click on the "Edit Content" button to bring up customization tools.

Editing Text

To edit the text, double-click on the box you wish to edit. You can add or delete any text you want. The font can also be modified using the Format Component panel on the right side of the screen.

Adding Components

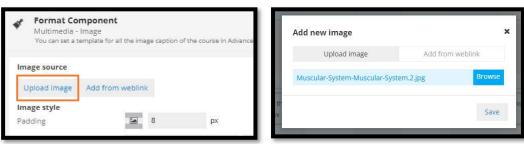

To add any of the component options, simply drag the icon to the desired location on the page and a placeholder will be created in its place.

Adding an Image

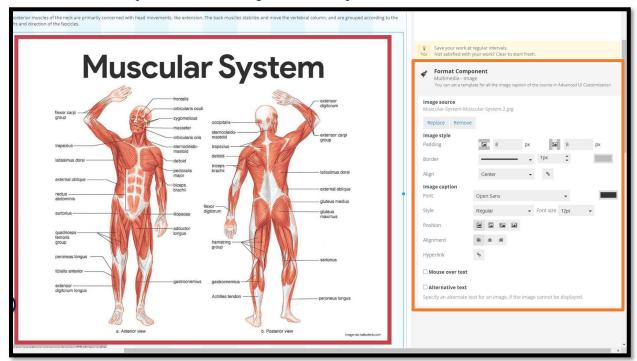

a) Drag the image icon onto the page to create a placeholder and click "upload image".

b) Click "Upload image" under the image source. You can browse your computer to find the image you want to upload.

https://www.cambridge.org/highereducation/ or contact coursewaresupport@cambridge.org c) You can use the side panel to edit the image and add a caption.

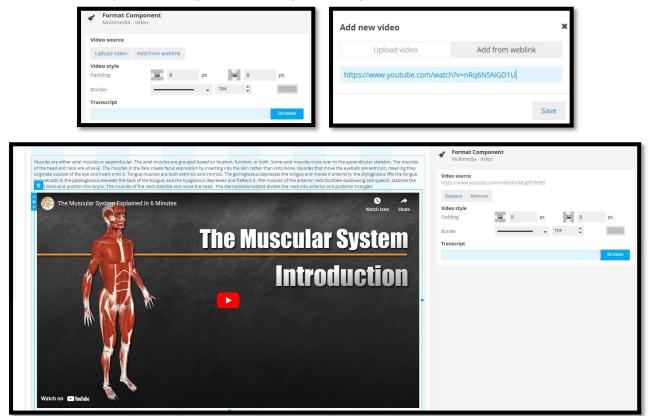

Adding a video.

a) Drag the video icon to create a placeholder.

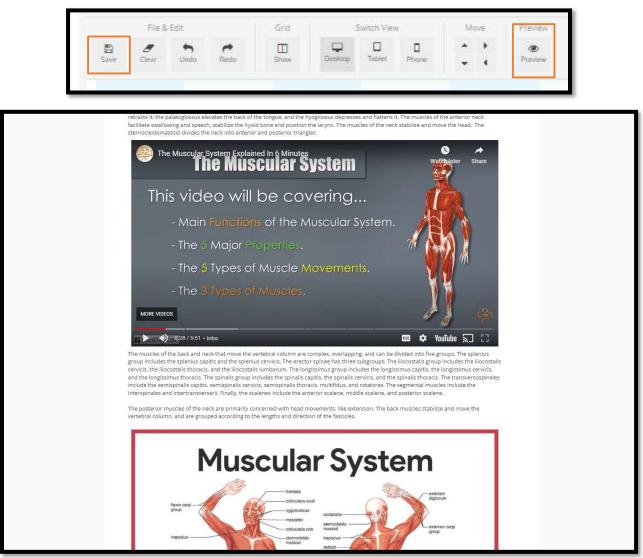

b) You can either upload a video you have already saved, or you can add a link.

https://www.cambridge.org/highereducation/ or contact coursewaresupport@cambridge.org

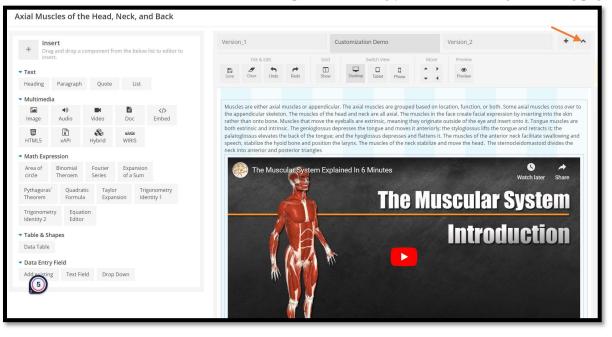

Step 4 – Review Changes

Then click the Save button at the top-left-hand corner to save the changes. Press Preview to view the change in the student view.

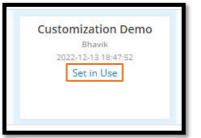

Step 5 – Set in Use

a) When satisfied with the version created, click the up button to bring you back to the original editing page.

https://www.cambridge.org/highereducation/ or contact coursewaresupport@cambridge.org b) Once back on the original editing page, you MUST select "Set in Use" for your new version.

c) Once you've set it in use, exit out of that tab and refresh the learning activity, and the new version that you customized will be shown.

Axial Muscles of the F	Iead, Neck and Back
and the second	Axial Muscles of the Head, Neck, and Back
	Muscles that move the eyeballs are extrinsic, meaning they originate outside of the eye and insert onto it. Tongue muscles are both extrinsic and intrinsic. The genioglossus depresses the tongue and moves it anteriorly; the styloglossus lifts the tongue and retracts it; the palatoglossus elevates the back of the tongue; and the hyoglossus depresses and flattens it. The muscles of the anterior neck facilitate swallowing and speech, stabilize the hyoid bone and position the larynx. The muscles of the neck stabilize and move the head. The sternocleidomastoid divides the neck into anterior and posterior triangles
	The Muscular System Explained: The Muscular System Introduction

NOTE: Images and videos are just two examples, many other features can be added to the content page using this same pattern of dragging the icon onto the page to create a placeholder and then uploading/importing the content.

Creating a 100% New Version.

a) Follow the same first few steps till you come to the editing page. Then click "Create New Version" and then name the new version.

- d) Hit save and click "Preview"
- e) Once the learning activity page is ready for use, go back to the original editing page and "Set in Use." Exit out of that screen back to the learning path and refresh the page and a new custom page will appear.

NOTE: One very important thing to remember is, that if you want to create a whole new learning activity, the content MUST stay aligned with the original learning activity content. This is because the supporting remediation material will be based on the original activity content.

Step 6 – Adding an Additional Learning Activity

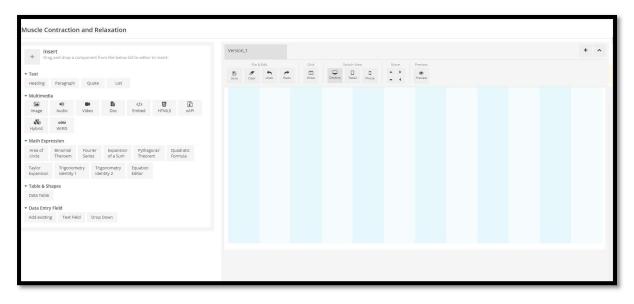

a) To add a completely new learning activity, click "Create a new learning item" at the bottom learning

1	12	Critical Thinking: How are Skeletal Muscles Named?	66/4000
1	13	Feedback to Critical Thinking. How are Skeletal Muscles Named?	82/4000
1	14	Cuiz Naming Skeletal Muscles	37/4000
C	Create a	new learning item	

b) Next you will upload a cover image and name the learning activity. Then click "Add Content".

Upload cover Image Upload an ornamental cover image (PG ideal resolution 1600:600pu)	
Text for the image	
Enter Alt text for Accessibility 0/3	ó
Created : Today Last Modified on : Toc	ay
Learning Item Name	
Muscle Contraction and Relaxation 34 / 400	
Contents Add Content	

c) You will be brought to an empty content page. Follow the same steps as before and create all the content component placeholders and add content.

NOTE: One very important thing to remember is, that if you want to create an additional new learning activity, not a part of the original course, **there will be NO remediation support material for the activity.**
