

EUROLUB Kraftstoff- und Einspritzsystemreiniger

Product Features:	Highly effective solvent combination with surface-active additives for the optimal function of the injection- and fuel system of all two & four-cycle petrol engines. Removes and decreases resins and crystal-like deposits from injection valves and feed pumps. Cleans the upper burn range, the entire system, protects against dangerous corrosion and neutralizes condensation. Improves the exhaust gas vales, increases engine performance and reduces the fuel consumption.
--------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Application:	Fill into fuel tank before refueling after all repairs and tuning at fuel injection system, spark plugs and cylinder heads. Content 300 ml is sufficient for approx. 60 litres fuel.
