Overview

Guideline Objective

To provide clinical practice recommendations for the diagnosis and management of children with steroid-sensitive nephrotic syndrome (SSNS)

Patient Population

Children (>3 months and <18 years) with SSNS

Recommendations

Recommendation Statements

Major interventions covered in this guideline include:

- Clinical assessment, diagnostic work-up, and referral
- Guidance on primary immunosuppressive treatment for idiopathic nephrotic syndrome (NS)
- Monitoring during the acute phase and follow-up
- Guidance on use of first- and second-line therapy for relapsing SSNS
- Management of adjunctive measures
- Role of childhood-adult transition

Note: Full recommendation statements have not been provided because this guideline does not meet EGT's systematic review of the evidence criteria. Refer to the original guideline for more information.

Evidence Rating Scheme

Refer to the original guideline documentation for more information.

Recommendation Rating Scheme

ECRI's Guideline Profiles are designed to provide information and assist decision-making. Variations in practice will inevitably, and appropriately, occur when clinicians take into account the needs and preferences of individual patients, available resources, and limitations unique to an institution or type of practice. Every healthcare professional using these Guideline Profiles is responsible for evaluating the appropriateness of applying them in a clinical setting.
