Overview

Guideline Objective

To provide pragmatic clinical guidance for pediatricians on the diagnosis and management of global developmental delay (GDD) in the Indian settings

Patient Population

Children under 5 years of age with suspected or confirmed GDD

Recommendations

Recommendation Statements

Major interventions covered in this guideline include:

- Developmental surveillance and screening, clinical evaluation, and investigations to establish etiology
- Management of early interventions for high-risk newborns, treatable causes, and neurological comorbidities
- Interventions on counseling, prognosis, and follow-up

Note: Full recommendation statements have not been provided because this guideline does not meet EGT's systematic review of the evidence criteria. Refer to the original guideline for more information.

Evidence Rating Scheme

Refer to the original guideline documentation for more information.

Recommendation Rating Scheme

ECRI's Guideline Profiles are designed to provide information and assist decision-making. Variations in practice will inevitably, and appropriately, occur when clinicians take into account the needs and preferences of individual patients, available resources, and limitations unique to an institution or type of practice. Every healthcare professional using these Guideline Profiles is responsible for evaluating the appropriateness of applying them in a clinical setting.
