

THE EXPERTS' CHOICE

GET YOUR MONEY BACK

Air-Pot containers might seem expensive when compared to standard plastic pots or fabric bags, but faster growth and bigger yields mean that it takes no time to earn back the investment. Sturdily built from recycled plastic they will last many years, even outside in strong sunshine.

The design of the pot wall eliminates root circling and promotes the development of healthy fibrous roots. These fantastic roots absorb more nutrient and water leading to faster growth and bigger yields.

THE EXPERTS' CHOICE

CASE STUDY

Ultra Health - New Mexico Senior Grower - Eric Howard

At Ultra Health we exclusively use Air-Pot containers to grow medicinal Marijuana. With them we have cut our growth times and substantially increased our yields.

We ran a trial comparing Air-Pot containers with standard plastic pots and fabric bags.

Yield figures were:

Plastic pot - 12 gal - 6-8oz per plant
Fabric pot - 15gal - 10-12 oz per plant
Air-Pot® - #15 - 12-20oz per plant

Not only have we almost doubled our yield but Air-Pot containers cut ten days from the veg time of our growth cycle. This allows us to run five rather than four grows a year - a further twenty five percent increase in production.
