PROPAGATION & GROWING MEDIUM

An innovative and unique propagation and growing medium originating from Holland.

Truly unique, the **Eazy Plug** range comes with predetermined EC and pH levels and self regulates to exactly the right air-to-water ratio. Due to its strongly bonded organic components, there is no necessity for pots or sleeves, thus offering huge hair root structures as a result of the air pruning effect.

With its superb water uptake and uniform moisture distribution, it can be supplied dried, offering a clean lightweight growing medium with an unlimited shelf life.

Eazy Plug offers a full cycle, sustainable growing solution containing **Plugs, Blocks** and **Pyramids**.

eazyplug

WHY CHOOSE EAZY PLUGS?

Improved profitability

A reduction in cycle time of up to 3 weeks with a 20% saving in fertiliser, all whilst achieving bigger crops and yields.

Sustainable

Designed to follow the cradle-to-cradle principle. The products themselves are dried and lightweight thus saving energy during transport. Eazy Plug does not use plastic wrapping and so saves the environment on plastic waste.

Compostable

Eazy Plug materials are declared 100% compostable in normal composting conditions. There is no discernible effect on the composting process due to the bonding of the components. Combined with its non-toxicity, Eazy Plug materials can simply be put into soil or any other natural environment without leaving a footprint.

Organic materials

All Eazy Plug substrates are made of organic material of only the very best quality. These organic materials are bonded and stabilised, creating an airy structure with a superb water holding capacity.

100% success rate

By following their simple instructions Eazy Plug state maximum success rate will always be achieved.

Rapid capillary action

The water uptake of the material is extremely fast. A dried Eazy Plug takes less than ten seconds to re-moisten. An Eazy Block takes less than 15 seconds and even the larger Eazy Pyramid with a volume of 4.5 ltr (1.19 gallon) re-moistens within 2 minutes.

Limitless shelf life

All Eazy Plug substrates are delivered dried, making them very lightweight and reducing the chance of moulds. That makes the shelf life of the products practically unlimited.

Fast and vigorous root development

Eazy Plug substrates all have a predetermined pH and EC value and a fixed air-to-water ratio. This ensures that propagating and growing conditions are always optimised. Consequently, Eazy Plug provides amazingly fast and powerful germination and rooting.

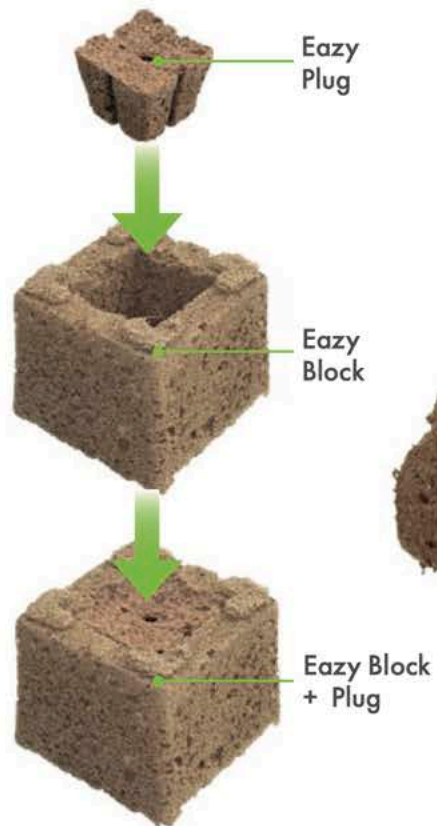

Eazy Plug®, Eazy Block® and Eazy Pyramid® are registered trade marks from HGA Garden.

A REVOLUTION IN GROWING

Eazy Plug offer unparalleled performance, sustainability and maximum yields combined into one system: **Eazy Plug Full Cycle**.
With Eazy Plug Full Cycle it is possible to benefit from all of the advantages of the famous Eazy Plug throughout the entire cultivation period; from propagating to harvesting.

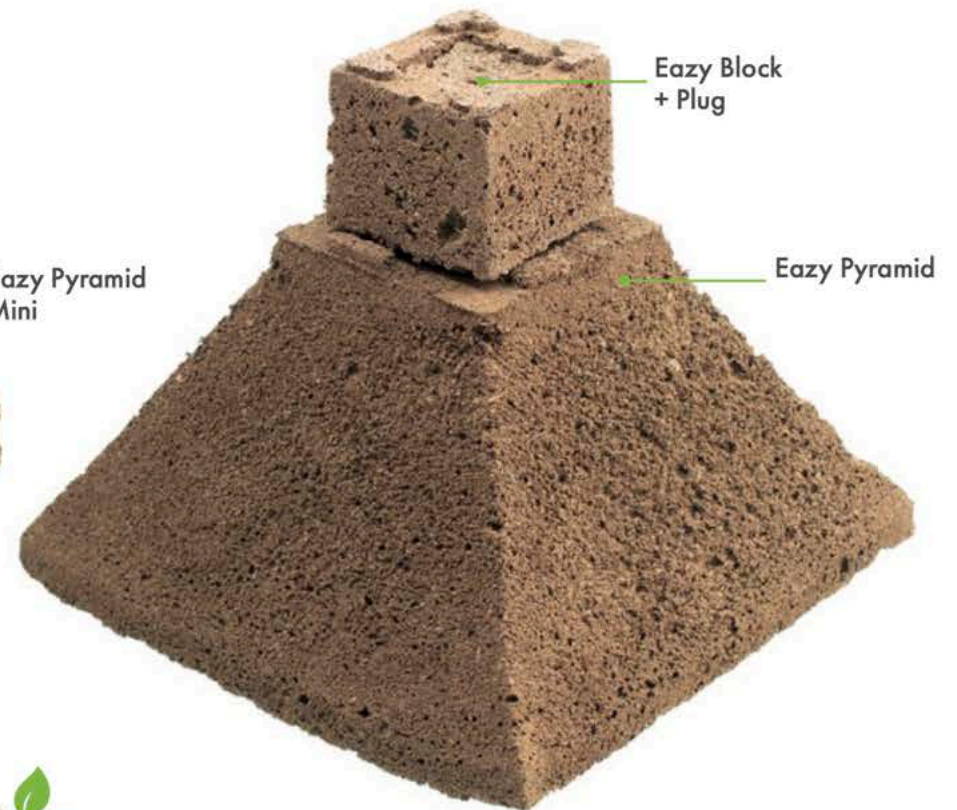

Eazy Block + Eazy Plug

Eazy Pyramid Mini + Eazy Plug

Eazy Pyramid + Eazy Block + Eazy Plug

eazyplug

EAZY PLUG

Eazy Plug has, with its organic materials and special way of bonding, a predetermined pH and EC value and a fixed air-to-water ratio.

By ensuring the plug can always drain excess water it cannot be overwatered. The optimal conditions created by Eazy Plug results in fast and powerful rooting and germination. The Eazy plug is supplied dried, making it clean and lightweight and reducing the risk of moulds.

- Simple to use
- Remains firmly bonded when transplanting reducing the risk of root damage
- No rooting gel or powder required for cuttings

Technical Data

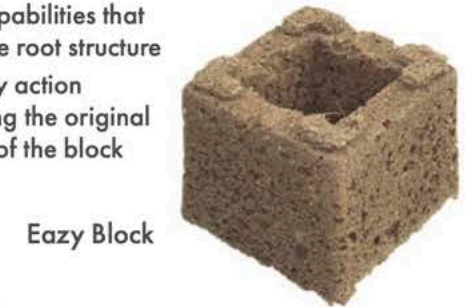

Single Eazy Plug Size (L x W x H)	EC	pH	Volume
3.5 x 3.5 x 3cm	1.0	5.8	0.035L

EAZY BLOCK

Stronger and faster rooting than anything else on the market. The Eazy Block is the next evolution in sustainable growing media, developing on all the characteristics of the Eazy Plug.

From its predetermined and buffered pH and EC values, to its self-regulating air-to-water ratio, the Eazy block is extremely versatile and will perform in any application and in all available hydroponic systems. The Eazy Block is supplied dried, making it clean and lightweight and reducing the risk of moulds.

- Simple to use
- Air pruning capabilities that result in a dense root structure
- Rapid capillary action whilst preserving the original characteristics of the block

Technical Data

Single Eazy Block Size (L x W x H)	EC	pH	Volume
7.5 x 7.5 x 6.5cm	1.0	5.8	0.35L

EAZY PYRAMID

The Eazy Pyramid is an amazing new development for the horticultural sector. Its optimised growing volume, equivalent to 13.5 ltr is enough for a whole crop cycle.

Offering the same great characteristics as the Eazy plug, with predetermined and buffered EC and pH values, and completely self-regulating air-to-water ratio, the Eazy Pyramid is the next evolution in growing.

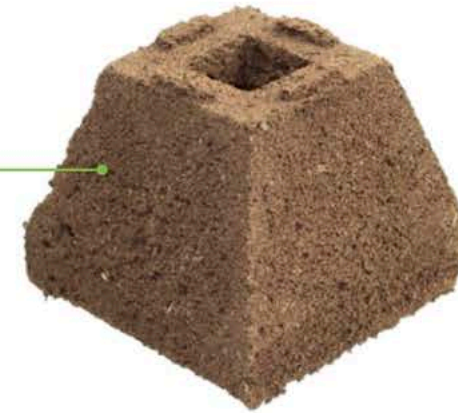

- Stronger, healthier plants in less time
- Dense root structure caused by air pruning

The Eazy Pyramid is supplied dried, making it clean and lightweight, with limitless shelf life and no risk of moulds.

FAST AND HEALTHY PLANT DEVELOPMENT

The effective root surface area of a plant is much bigger, and with it an increased uptake in water and beneficial nutrients. Plants will grow faster, will be healthier and produce higher yields than in any other available growing medium.

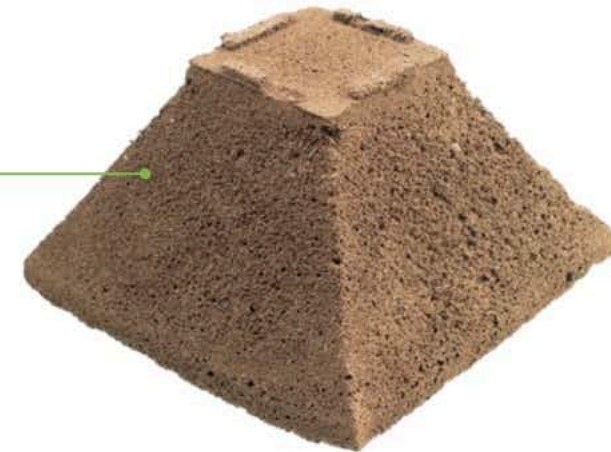

Eazy Pyramid Mini

Technical Data

Single Eazy Pyramid Mini Size (L x W x H)	Size Top	EC	pH	Volume
12 x 12 x 10cm	8 x 8cm	1.0	5.8	1.2L

Eazy Pyramid

Technical Data

Single Eazy Pyramid Size (L x W x H)	EC	pH	Volume
25 x 25 x 15cm	1.0	5.8	4.5L

Eazy Plug®, Eazy Block® and Eazy Pyramid® are registered trade marks from HGA Garden.

Eazy Plug SYSTEMS

Eazy Plug Flood & Drain systems are the latest evolution in hydroponics.

Coupling the increased feeding control of the flood and drain technique with an innovative capillary acting, root pruning growing medium results in the healthiest plants and largest yields.

- **Highly oxygenated** – continuous feeding alongside the root pruning action results in a highly oxygenated root environment
- **Greater control** – feed plants little and often (segmental timer required), and adapt to suit the life stage of the plant
- **More efficient** – Labour saving using 20% less fertiliser and reduced cycle times of up to 3 weeks
- **100% Compostable material** – Combined with its non-toxicity, Eazy Plug materials can simply be put into soil or any other natural environment without leaving a footprint
- **Increased yields** – Constant feeding combined with the highly oxygenated rootzone results in healthier plants and improved yields

Specifications

Product Code	Description	Dimensions
	Eazy 4 pot System	800x800x280 mm
	Eazy 9 pot System	1000x1000x280mm
	Eazy 4 pot System with 4 pyramids	800x800x320mm
	Eazy 9 pot System with 9 pyramids	1000x1000x320mm

HOW IT WORKS

Eazy Pyramids (9Pot System shown)

The Eazy Pyramids are positioned on the planter in predetermined locators.

Plants are then placed on or inside the pyramid, dependent on your chosen propagation method.

The planter (diagram 1) is situated on top of a nutrient reservoir (diagram 2). Using a segmental timer, solution floods the planter at set times, for a required period (diagram 3). Each pyramid locator consists of four feet to prevent the Eazy Pyramid from becoming saturated during the flood period. The Pyramid simply acts as a wick, drawing solution into the rootzone.

After flooding for the desired period, the solution then drains back into the reservoir where it remixes with the remaining nutrient solution (diagram 4).

Each Eazy pyramid is supplied with predetermined EC and pH levels that self regulates to exactly the right air-to-water ratio. Due to its strongly bonded organic components, there is no necessity for pots or sleeves, offering huge hair root structures due to the air pruning effect. Due to the root pruning there is also no exposure of roots or requirement for a planter cover.

Equivalent to 13.5 ltr, the Eazy Pyramid provides the optimised growing volume for a whole crop cycle. Using the Eazy Plug Flood & Drain System plants will grow faster, will be healthier and produce larger yields than in any other available growing medium.
