

## HOW DO WE START CREATING THE FUTURE?

*dream + do*

## LEAD BACKEND ENGINEER (f/m/d)

Join **Porsche Digital** as a **Lead Backend Engineer (f/m/d)** in Barcelona and become a foundational member of our new location.

You will be part of the first product team in Barcelona which will be building the Porsche Dealer Websites Service. With this CMS-based product we enable dealers worldwide to customize their websites to their needs while building a central solution that is deeply integrated into the digital ecosystem of Porsche.

The agile product team will have full product ownership and drive one of the most important strategic assets in the company's digital marketing landscape. You will also be a member of the global digital engineering community of Porsche, exchanging ideas and expanding your skillset with colleagues worldwide.

Being one of our first members on board will give you the opportunity to grow with the Porsche Digital Family, establish the local company culture, and set new standards for our collaboration also within our global network at Porsche.

Although we have an office established in the center of Barcelona, we have a flexible work from home policy.

### YOUR ACCOUNTABILITIES

- Work hands-on implementing our product through modern BE technology
- Lead and coach the first backend engineers in our new location
- Implement and maintain our backend architecture for durability and quality
- Define the rules of play on how we build a durable and scalable product
- Develop new features alongside customer feedback and data
- Development and implementation of web-interfaces, backend services and APIs to existing services and integration of other ecosystem assets and capabilities
- Ensure the team follows the principles of DevOps with regards to writing maintainable code, reusability of components, and continuously deploying our software into test and productive environments
- Persistent caring about premium 'Porsche-like' quality and security of our product through modern quality tools and processes
- You will be an active part of an agile team, take over product responsibility, work closely with other teams in the digital ecosystem at Porsche, integrate crucial assets and capabilities as well as scale the product.

### YOUR PROFILE

- You have a master's degree in software engineering, information technology or alike and at least 5 years of experience in software engineering
- You preferably worked already in senior or lead positions
- Knowledge of modern software architecture approaches (e.g. micro-services, API driven) is mandatory for you
- Preferably you have implemented Sitecore (currently Sitecore 9) (.net, C#)
- You have knowledge of modular CMS tools (forms, content hub, exm)
- You follow the principles of DevOps and encourage the team to do so
- Solid experience in developing and maintaining complex cloud architecture is important
- You are experienced in Sitecore SXA, Sitecore Scriban and/or Helix is a bonus
- You are a team player being part of an agile team, actively taking care of team culture and the product value towards our customers
- Our company language is English, so you should speak it fluently
- If you are a contributor to the open-source community, please don't hesitate to share your Git profile beforehand
