HOW DO WE START
CREATING THE FUTURE?
dream + do

(Senior) Software Architect (f/m/d)

Join **Porsche Digital** as a **(Senior) Software Architect (f/m/d)** in Berlin and become a member of our company.

As (Senior) Software Architect you will be part of our Software Architecture guild and a sprint team (2-pizza-team setup). You will be working closely with the other software architects to define, maintain and progress our software development strategy. With your sprint team you will provide advice to the product owner on how to best architect the solution at hand. You will also support the software engineers in your team to implement your architecture concept. We collect and prioritize our work using a backlog maintained in JIRA. We follow a test-driven development approach in order to ensure high quality in our source code.

Your team will focus on one of the applications we implement at Porsche Digital, such as sounce.io. The team develops and operates the application. Within our teams we follow the principles of DevOps with regards to writing maintainable code, ensuring appropriate test coverage, and continuously deploying our software into test and prod environments.

Qualification
- BS or MS in Computer Science, Computer Engineering or similar
- Highly advance software engineering skills
- Good cloud computing knowledge (focus on AWS)
- 5+ years professional experience in software engineering
- Practical experience in architecting large software systems for productive use
- Mentoring and training of other team members on design techniques and coding standards
- Fluent in English

Preferred Qualifications
- Professional experience in architecting large cloud applications for productive use
- Expertise with all major programming language families (object oriented, functional, scripting)
- Highly advanced experience from using computer science fundamentals such as data structures and algorithms, as well as software and cloud software design patterns
- Experience with formal standards and frameworks for documenting architecture, such as 4+1, arc42 or SAP TAM
