PRIMATE VITAMIN D3

COMPLEMENTARY FEED FOR MONKEYS

Feed supplement for primates. Vitamin D plays an important role in various organ systems:

- Vitamin D regulates the levels of calcium and phosphorous in the blood by promoting its absorption from the food in the gut as well as its reabsorption in the kidneys
- It reduces calcium loss from the bone

Dosage per day: 1 spoonful (5 g) for every 6 animals; equivalent to 0,5 g per animal daily (= 40 i.u.)

Composition: Starch (Maize), Dextrose.

Analytical constituents:

Crude Protein	0,3	%
Crude Fibre	0,7	%
