

Reduce cost and risk by enabling signers to verify their identity digitally, anytime, virtually anywhere

As more sensitive transactions move online, verifying the identity of your signers becomes more critical and more challenging. Identifying your signers helps you to not only protect against fraud, but to also comply with regulations such as Know Your Customer (KYC). In some regions, a digital agreement is not legally enforceable without being tied to a strong identification process. Verifying your signers online may be difficult because they may not be physically present, and they expect to sign when it's convenient for them and on their device of choice.

The DocuSign Identify Platform is a plug and play platform that helps you add your preferred identification method into an agreement process to help you reduce risk for your important agreements globally.

- Powered by robust open APIs, integrate your preferred identification method in the agreement workflow
- Choose from integrating your existing ID verification method, using our ecosystem of trusted partners, or relying on DocuSign's own ID Verification offering
- Configure branding, the types of accepted IDs per country, as well as the type of signature you require from each signer
- Globally applicable with full integration to digital signatures for compliance with regional signature standards (i.e. eIDAS-compliant advanced (AES) and qualified electronic signatures (QES))

Automatically verify government issued IDs

ID Verification is the first DocuSign product built on the Identify Platform. DocuSign ID Verification automatically verifies a signer's government issued IDs on practically any device, anywhere. It allows signers to select from a list of available ID types based on the signer's selected country – for faster, easier and more secure agreement completion. Other capabilities include; a liveness detection workflow that adds an additional biometric check to the identity verification process, a one-time passcode (OTP) delivered to recipients via SMS or phone call, knowledge-based authentication (KBA), and an Identity Wallet¹ that enables recipients to store and re-apply their identity verification details on subsequent agreements to simplify the process and maintain a consistent level of security.

Digitizing the identification process reduces risk, increases trust and supports legal validity and compliance with regional standards.

Use case examples

Financial Services

Account opening forms
Lease and financing
Loans
Wire Transfers

Insurance

Insurance subscriptions

HR

Policy eDelivery
Onboarding documents

Legal

Customer enrolment

Pharma

Patients forms
Clinical trial onboarding
GxP agreements

(1) Only compatible with our ID Verification for EU Qualified and Liveness Detection for ID Verification workflows

Key capabilities

Fully integrated with DocuSign eSignature

Deliver an end-to-end digital agreement experience for faster completion and increased conversion rates compared to manual processes.

Scan and upload government issued identity documents on practically any device

Signers can quickly and easily verify their identity with a passport, drivers' license or national identity card by simply uploading it from their computer or using their mobile device to take a photo of their document. Enable Identity Wallet to save time for repeat signers.

AI-enabled biometric detection for heightened security

Apply artificial intelligence to live video selfies and help check that IDs provided are genuine, signers are physically present, and that signers' faces match their IDs.

Algorithmic-based matching of signer name against ID

Mitigate risks of fraud by ensuring only the correct individual can view the agreement.

Analysis of identity document machine readable zone

Reduce errors and ensure document validity with automatic analysis of biometric and alphanumeric data contained within the ID.

Supports online eID schemes

Ensure agreements are legally enforceable and compliant with preferred regional identification processes.

Compliance with regional regulations

Works seamlessly with DocuSign's digital signature offerings to support achieving EU & UK eIDAS compliance at the Advanced signature level. ¹ Dedicated workflows support compliance with key regulations such as FINTRAC. ²

About DocuSign

DocuSign brings agreements to life. Over 1.5 million customers and more than a billion people in over 180 countries use DocuSign solutions to accelerate the process of doing business and simplify people's lives. With intelligent agreement management, DocuSign unleashes business-critical data that is trapped inside of documents. Until now, these were disconnected from business systems of record, costing businesses time, money, and opportunity. Using DocuSign IAM, companies can create, commit, and manage agreements with solutions created by the #1 company in e-signature and contract lifecycle management (CLM).
