<Cover>

As an Associate Technical Director at a studio within a large management consulting firm in Portland, I've gained an enormous amount of knowledge regarding the ever-changing digital ecosphere. Keeping up with constantly evolving technology brings a challenge I've enjoyed facing over the last decade in my web design/development and team management experience. Seeing applications evolve from vision through launch, while exceeding customer expectations has always given me a great sense of accomplishment and enjoyment. What I enjoy most about technical direction is being the visionary that works collaboratively with every group from stakeholders to creative and UX leads to developers.

My strongest asset is my ability to recognize the problem at hand, distill it down to its fundamental core, and work with a team to come up with the best possible solution, while being able to articulate the problem and solution to varying audiences.

I am a person who thrives in a collaborative and competitive environment. Adapting to become an essential team member has always been a strong point of mine, whether it's the leader, diplomat, or the active listener.

<SkillSets>

As someone that comes from a design background, I thrive in a competitive and collaborative environment. I excel at clearly communicating with developers, designers, and executive stakeholders. I also enjoy being challenged both creatively and technically while effectively getting to the root of a problem.

Technical Experience
- Highly proficienct/fluent in PHP, HTML/CSS, ReactJS
- CI/CD deployment pipelines
- Version control/Git
- Adherence to WCAG 2.1
- Technical writing
- Developer team management

Project/Client Management
- Agile workflow within JIRA
- Requirements gathering and scoping
- Workshop facilitation
- User story creation and backlog management
- Timeline and budget management

</SkillSets>

<Experience>

I have nearly 15 years of design, development, and team leadership experience in the dynamic digital agency world. I have envisioned, built, and directed web application lifecycles while working closely with executive stakeholders for the following clients: **Capital Group, Starbucks, Nike, Intel, The Standard Insurance, Edwards Lifesciences.**

My role as an Associate Technical Director has allowed me to showcase my most valuable traits as a team leader and project owner. I'm passionate about unearthing problems with clients through workshops and collaborating with creative and UX leads to develop the most impactful solution to any challenge with a methodology that's rooted in human centered design.
