

Accelerate & Streamline Agentic AI Adoption With Our **Agentic AI Opportunity Workshop**

Our Agentic AI Opportunity Workshop helps you identify high-value use cases, manage risk, and choose the right path forward—so you can **realize outcomes, faster**.

This workshop is designed to provide public sector and enterprise leaders with a governance, compliance, and solution-focused path to developing and integrating transformative Agentic solutions using Gemini Enterprise Agent Platform. It is a structured working session led by Improving, focused on applying Google Cloud's **Gemini Enterprise Agent Platform** to real business challenges. Rather than reviewing capabilities in isolation, we work directly with your teams to evaluate where agent-driven solutions can improve workflows, reduce friction, and enable smarter decision-making. Combined with Improving's AI maturity model and extensive public sector and enterprise delivery experience, our session is aimed at helping technology leaders adopt agent-driven AI in an efficient, structured, and scalable way.

Outcome-focused

Identify high-impact agent use cases aligned to your business goals.

Secure & Compliant

Evaluate through the lens of governance, security, privacy, and compliance.

Integrated & Scalable

Assess integration across data, systems, and workflows to scale with confidence.

Right Path Forward

Determine whether to buy, build, wrap, refactor, or replace with clarity.

Real Business Impact

Drive productivity, reduce friction, and enable better decision-making.

Expert guidance.
Real conversations.
Clear direction.

Work with Improving and Google Cloud experts to turn your challenges into actionable opportunities.

What Our Agentic AI Opportunity Workshop Includes:

Our Agentic AI Opportunities Workshop session is beyond your typical AI training session. You will leave with tangible outputs aligned to your organization, department, or agency's strategic and operational priorities:

- A prioritized Gemini Enterprise Agent Platform use case tied to a real business challenge
- A clear view of risks, constraints, and governance requirements
- A recommended implementation path (buy, build, wrap, refactor, or replace)
- Defined next steps toward execution
