

Tableau to Microsoft Fabric Migration

Unlock the Power of Modern Analytics

ENGAGEMENT OVERVIEW

Transitioning from Tableau to Microsoft Fabric is more than a technology upgrade - it's a strategic move to streamline your data landscape, reduce costs and empower teams with advanced analytics and sharing tools.

Our migration approach is designed for organizations ready to modernize their reporting environment. We focus on moving what matters, eliminating what doesn't and transforming legacy Tableau reports into a state-of-the-art, well-architected and well-governed Microsoft Fabric ecosystem.

OUR APPROACH

- **Comprehensive Assessment & Planning:** Inventory all existing Tableau reports, analyze their usage and business value. Categorize reports by priority, sensitivity and potential for consolidation or retirement. Create migration roadmap that aligns with business goals.
- **Migration:** Migrate and optimize valuable reports, ensuring data accuracy and performance. Establish a strong data governance framework.
- **Enablement & Optimization:** Equip users with training and support to drive adoption of Microsoft Fabric. Promote best practices for report development, performance tuning, and semantic modeling. Monitor usage and feedback to refine assets and foster self-service analytics.

Benefits of Migrating to Microsoft Fabric:

- Unified Data Governance
- Simplified Analytics Landscape
- Lower Licensing and Support Costs
- Enabled Secure Data Sharing
- Rich Reporting and Data Visualization

DURATION: • 2-Week Assessment.
Full migration timeline will vary upon assessment findings.
