

You call it Summer?

We call it Peril-Palooza!

Every year, as summer temps climb, so do the number of tech accidents. From overheating to water damage and more, we've got some surprising stats—but also simple solutions.

There are nearly **15% MORE BATTERY INCIDENTS** during the summer.

Rising temperatures can negatively impact your phone battery, reducing performance and permanently shortening its lifespan.

Beat the **HEAT**

- Avoid leaving your phone in direct sunlight
- Remove your phone from its case when charging
- Shut down unnecessary apps
- Let your hot phone cool down before using it again
- Never place it in the fridge or freezer -- the sudden temperature change can cause damage

Asurion sees **WATER RELATED INCIDENTS INCREASE 50%** between June and August.

Lakes. Beaches. Pools. Refreshing for you, but not so much for your phone. After a dip, get back up and running quickly.

DID YOUR TECH TAKE THE PLUNGE?

- First, turn off your phone
- Skip the rice method (72% of Americans admit they've tried it)
- Bring your phone to a repair expert to properly dry and clean it, inside and out

Summer yields nearly **15% MORE CRACKED SCREEN** claims.

Extreme heat can make your phone's screen more vulnerable to permanent damage. All it takes is a slip on the sidewalk, a dive in the parking lot, or a drop off a roller coaster to crack.

If any of your favorite tech devices suffer a dip, drop, or other summer mishap, visit a uBreakiFix by Asurion store near you, and we'll get you back up and running.

Don't sweat it. Asurion helps nearly **300 MILLION**

customers get expert repair, protection, and support services for phones, tablets, laptops, game consoles and nearly anything else with a power button.
