

Eigen Engineering Agent

Purpose-built AI for industrial automation that completes engineering tasks end-to-end.

100+ companies in 19 countries already using the agent.

2–5× faster execution than manual workflows.

Up to **50% efficiency gains** in engineering.

80% improvement in overall solution quality.

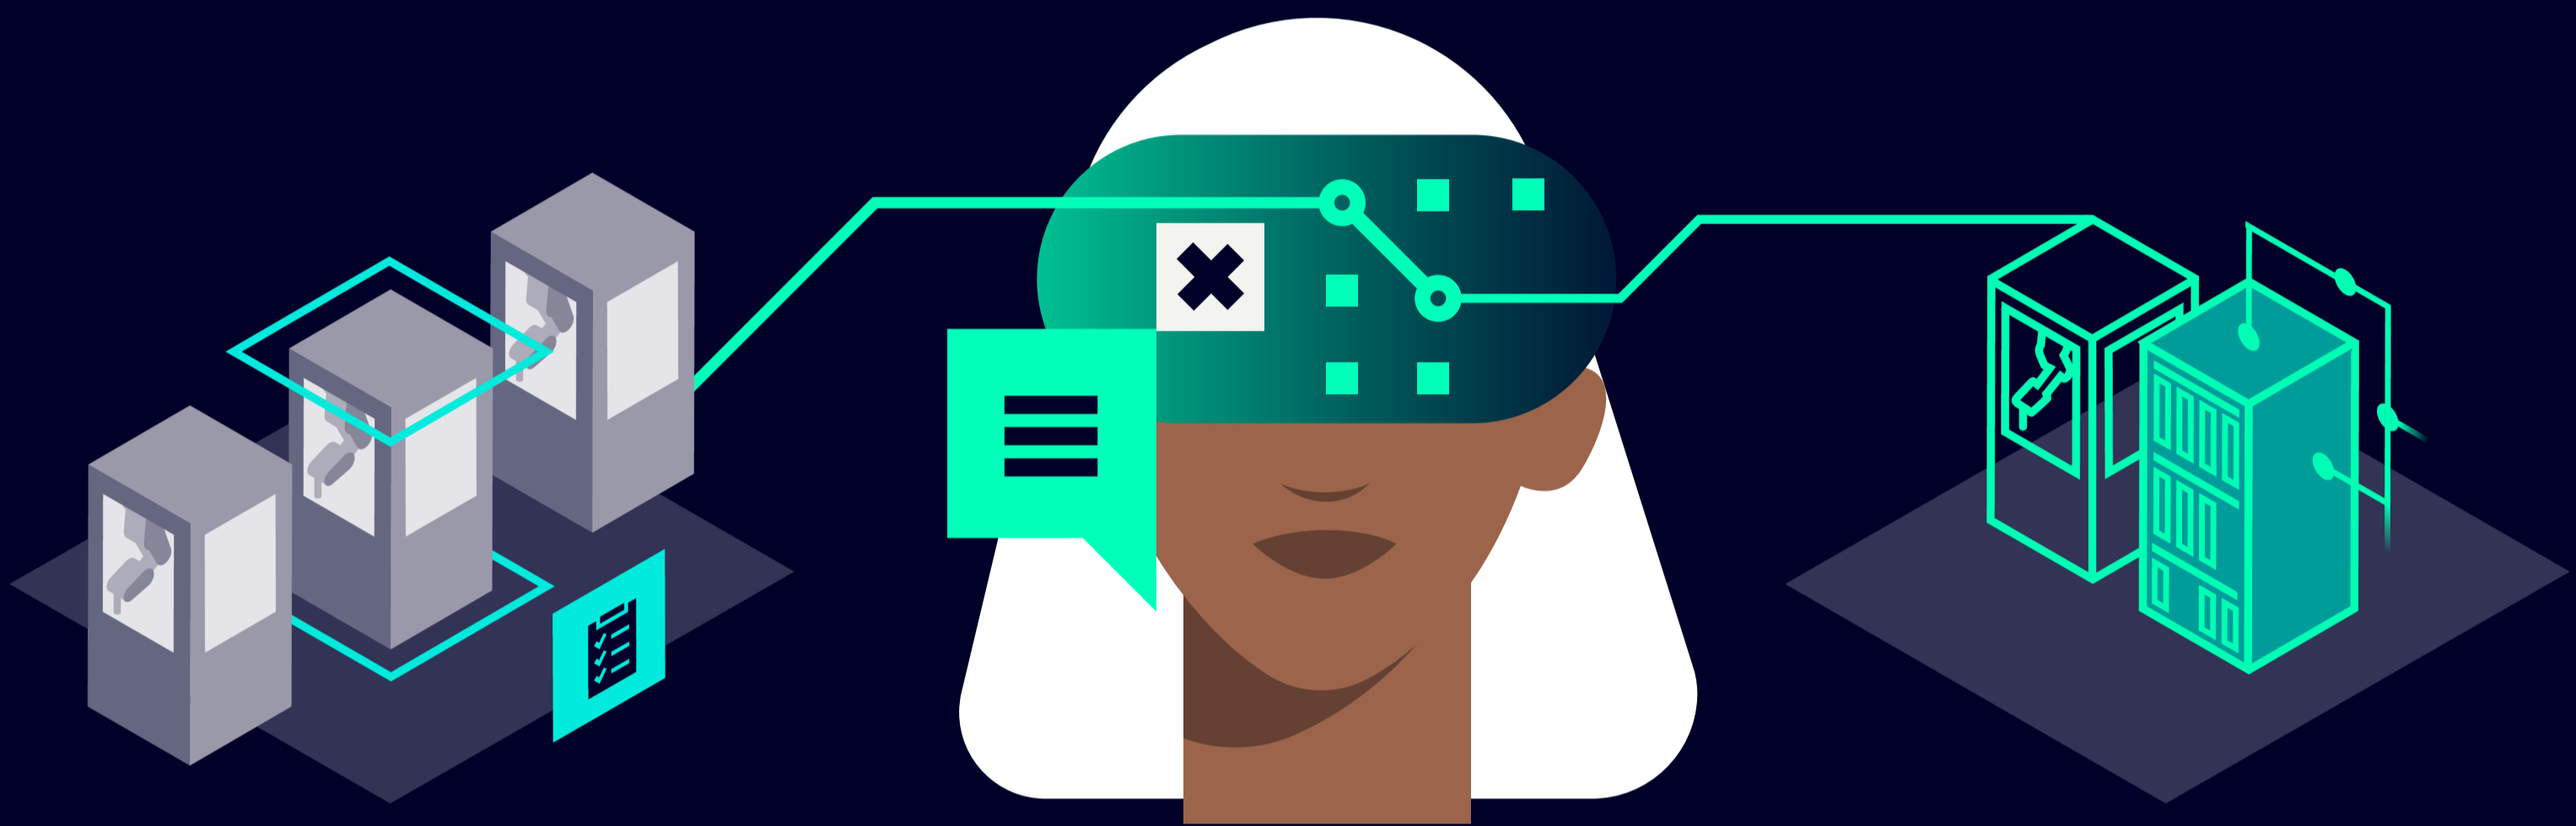

Enhanced with two new features.

Addressing two challenges at the start of automation projects:

- Translating electrical designs into functional software
- Applying engineering best practices to generate ready-to-use project structure

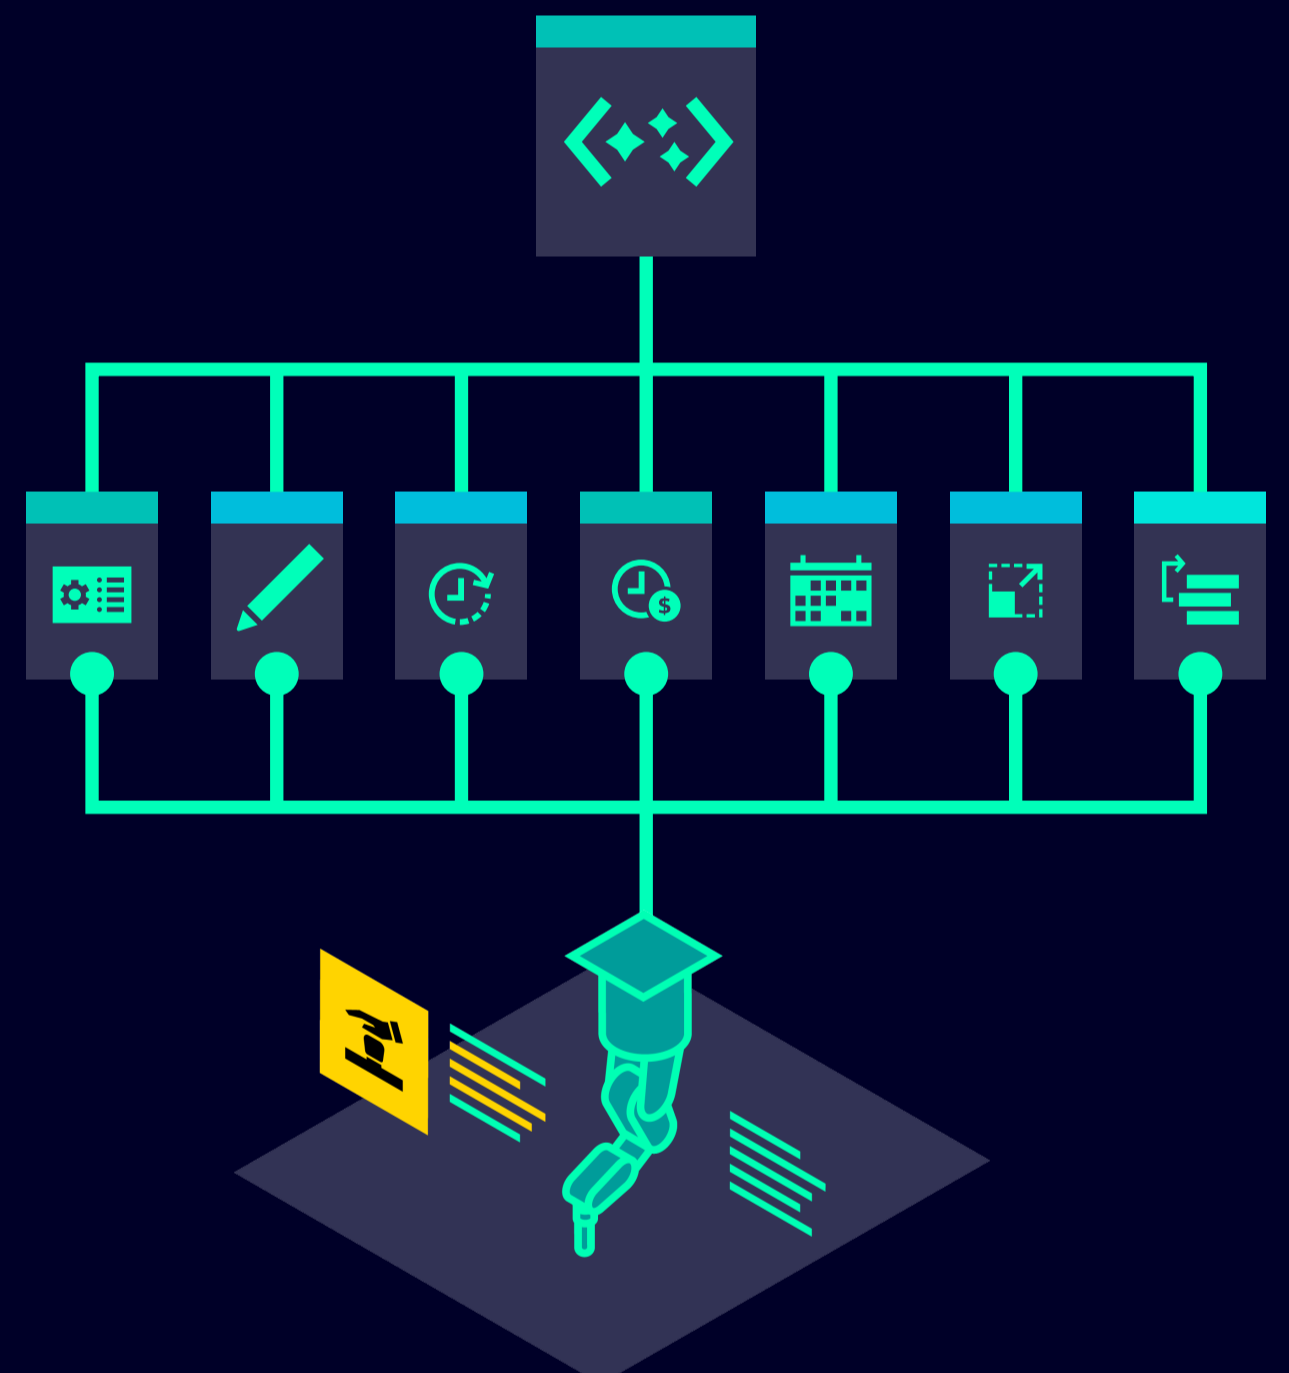

Key benefits:

- Grounds automation software in the actual physical system
- Turns engineering intent into an executable automation architecture

ECAD Integration

- Reads electrical design files and flags data inconsistencies.
- Converts hardware topology into automation software.
- Produces system-accurate code, reducing manual effort

Standards-compliant project generation

- Converts plain-language into a complete project structure.
- Aligns projects with the automation standards.
- Cuts configuration time from days to minutes.

Eigen Engineering Agent is part of the **Siemens Xcelerator portfolio**.
