

Unified Namespace Industrial Edge with HighByte

Level 1
Overview

Level 2
Detailed

1 Connect shopfloor equipment to Industrial Edge via pre-configured connectors

2 Transfer pre-processed data from Industrial Edge to HighByte via standard data protocols (e.g. MQTT, OPC UA...)

3 Use HighByte Intelligence Hub as the UNS to standardize, contextualize, and centralize data flows via schema-validated streams

4 HighByte publishes schema-validated streams to consumers via supervised, auditable exports over standard protocols (MQTT/Kafka/REST).
