# SIEMENS

# Into the digital and sustainable future – **driving next generation applications**

How can you make production more efficient? Accelerate your digital transformation?  
And become more sustainable?

The answer is our SINAMICS variable frequency drives. They are energy efficient, offer the versatility you need for any application, and drive your digital transformation by providing the data to continuously improve production efficiency and sustainability. Our drives offer you integrated safety and security features, efficient engineering and software tools as well as comprehensive lifecycle services. In other words: Everything you need to address the next generation of applications – today and tomorrow.

## EFFICIENT

Implement energy-efficient applications easily, quickly, and safely with efficient motion control.

- Sustainable Drive Systems
- Efficient Motion Control solutions
- Drive System Services

## VERSATILE

Drives equipped with tailored safety features to ensure optimal machine safety in a wide range of industrial applications.

- Safety and Security Integrated
- Drive applications
- Drives for any industry

## FUTURE-PROOF

Efficient engineering, powerful software tools, and cloud and edge connectivity for greater transparency.

- Digitalization in drive technology
- Efficient drive engineering
- Drive Software for all applications

# SINAMICS – the perfect fit for any industry

## Food & beverage

With SINAMICS drives we provide the food and beverage industry with drive solutions that allow them to meet individual customer requirements quickly, flexibly and with the highest quality. The drives also ensure that all processes are energy efficient and reliable.

## Chemicals

Applications in the chemical industry demand rugged, reliable and safe equipment, and of course this also applies to the drives. The SINAMICS family offers extensive safety functions and a high degree of protection, which makes it the ideal fit for harsh environments.

## Pharma

The pharmaceutical industry evolves at a rapid pace and it requires drive systems that can keep up. Thanks to their modular design, SINAMICS drives can be easily adapted to address requirements. Their high energy efficiency also gives users that all-important competitive edge.

## HVAC

With their industry-specific integrated software features e.g. for fan applications in HVAC systems / building automation SINAMICS drives are the perfect fit for these domains.

## Oil & Gas / Hydrogen

High levels of efficiency and safety are crucial in the oil & gas and hydrogen industries SINAMICS variable frequency drives fully comply with both requirements. Security Integrated ensures system availability and Safety Integrated functions keep people and machines safe.

## Automotive & Battery

The shift to e-mobility is fundamentally changing the automotive industry. By using a SINAMICS digital twin battery manufacturers and machine builders can speed up their time to market and satisfy the massively growing demand.

We offer solutions to meet current and future challenges in motion control. Thanks to comprehensive features and an innovative design, the SINAMICS family can be deployed in any industry, for example:

### Cranes

Cranes play an important role in many industries where the fast and precise handling of large and heavy goods is mandatory to enable optimal throughput and logistics. SINAMICS drive technology addresses each and every crane task.

### Water & Waste Water

Requirements in the areas of drinking water, waste water, and desalination vary widely. This is where the SINAMICS family comes into its own offering a selection of perfectly tailored solutions that ensure maximum efficiency and sustainability.

### Intralogistics

Increasing inventory turnover rates, small order quantities with fast delivery times and the increasing need to save energy and drive sustainability. We can help you master all these challenges with reliable SINAMICS drive technology.

### Marine

Driven by a strict decarbonization agenda, the disruptive trend of Green Shipping is shaping the future of the industry in an unprecedented way. SINAMICS drives and the consequential capture, analysis and evaluation of the wealth of data available in operation open up new dimensions regarding reliability and energy efficiency and in turn, environmentally-compatible operation.

### Pulp & Paper

The pulp & paper industry is facing an evolving market, strict climate goals, and new energy challenges. This means that plants must be smarter, more sustainable and more efficient than ever before. SINAMICS drives have the functions and performance to future-proof your business.

### Metals

The global metals industry is undergoing radical transformation primarily driven by the urgent need to decarbonize the various processes. This increases operational efficiency and production flexibility to adapt to changing market dynamics. SINAMICS drives represent the perfect fit for all applications in the metals domain, complemented by a digitalization portfolio and is your ideal and dependable partner to create a smart, efficient & sustainable production environment.

# Variable frequency drives **for every drive application**

## Pumping/ventilating/compressing

SINAMICS supports the continuous and energy-efficient operation of pumps, fans and compressors – that either run continuously or require a high dynamic performance. The advantages include especially flow control, short response times – and the avoidance of damaging vibration levels and cavitation.

- **SINAMICS V20**
- **SINAMICS G130 / G150**
- **SINAMICS G180**
- **SINAMICS G120X**
- **SINAMICS G220**
- **SINAMICS DCM**

## Moving

Energy-efficient and rugged solutions for basic conveyor technology involving roller or chain conveyors, hoisting gear and elevators. Additionally, these solutions address the needs of storage and retrieval machines that demand a high dynamic performance. And always with Safety Integrated onboard.

- **SINAMICS G120C**
- **SINAMICS G130/G150**
- **SINAMICS G220**
- **SINAMICS S150**
- **SINAMICS DCM**
- **SINAMICS G115D**
- **SINAMICS G120D**
- **SINAMICS S120**
- **SINAMICS S200**
- **SINAMICS S210**
- **SINAMICS DCP**

Depending on the actual power rating and functionality, the following drives are available, for example:

➤ **STANDARD PERFORMANCE CONVERTERS**

➤ **INDUSTRY SPECIFIC CONVERTERS**

➤ **HIGH PERFORMANCE CONVERTERS**

➤ **DISTRIBUTED CONVERTERS**

➤ **SERVO CONVERTERS**

➤ **DC-DC CONVERTER**

### Positioning

When high dynamic performance and precision are demanded: SINAMICS ensures that individual axes are precisely positioned and allows several axes to be interpolated in a coordinated fashion – for example, as required in complex robotic or handling applications.

➤ **SINAMICS G120**

➤ **SINAMICS G220**

➤ **SINAMICS G120D**

➤ **SINAMICS S120**

➤ **SINAMICS S200**

➤ **SINAMICS S210**

➤ **SINAMICS DCP**

### Processing

SINAMICS is the ideal solution for continuous processes demanding high speed and torque precision, for instance, for extruders, centrifuges, agitators and all types of production machines. With isochronous communication and Safety Integrated they are predestined to address high-end motion control applications.

➤ **SINAMICS G120**

➤ **SINAMICS G150**

➤ **SINAMICS G220**

➤ **SINAMICS S150**

➤ **SINAMICS DCM**

➤ **SINAMICS V90**

➤ **SINAMICS S120**

➤ **SINAMICS S200**

➤ **SINAMICS S210**

### Machining

Whether high-speed spindles or feed and auxiliary axes for turning, milling, drilling and sawing: SINAMICS is the perfect drive for all machining applications. Fast adaptability and minimum equipping times play a decisive role when it comes to achieving high levels of productivity.

➤ **SINAMICS S120**

# Efficient drive systems – Go for sustainability

Electric drive systems consume 70% of the overall energy used in industry – therefore representing an enormous energy saving potential. You can optimize your processes and enter into a new dimension of efficiency with the latest drive systems and digital drive train solutions.

The best way to really optimize your drive systems effectively: with a holistic, consequentially digital strategy. Together, we can draw-up the optimum solution for your plant or system. We can support you with the latest drive technology which complies with the standards of today and tomorrow. The energy efficiency features of our SINAMICS drives unlock further energy saving potential. With digital solutions, we transform the data from your drives into a truly valuable resource – which with Predictive Maintenance Services, significantly boosts productivity and efficiency. With Siemens as partner, you secure the know-how that you require to increase the productivity of your drives –

combining higher energy efficiency and productivity and at the same time saving valuable resources. Now is the time to take action. With SINAMICS drives, the possibilities are endless.

Go for drive system optimization! The key to improving drive efficiency is to optimize the entire system. Highly specialized motors and drives, intelligent sensors and analytic tools allow you to optimally harmonize and coordinate your processes and drive systems. Further, with a digital twin of your drive system, you can optimize your maintenance and energy management – slashing your energy consumption by up to 60 percent and making your operations more sustainable.

about efficient  
drive systems

**Next  
Generation**

The next generation of SINAMICS variable frequency drives supports a sustainable future in every phase of its lifecycle. Design, engineering and operational phases supported by space-saving design, efficient engineering tools, digital twin and energy-saving functions. SINAMICS drives with flexible hardware and software solutions are the key elements of an efficient drive system. For example with the Clean Power technology version of SINAMICS G220, the integrated Active Infeed Unit keeps harmonics to a minimum (THDi < 5%). This also reduces energy losses in the system.

# Motion beyond expectations

Drives move the industries. But how can they make them more efficient, more reliable and more sustainable – and exceed all expectations while they are doing it? Our answer: Siemens Xcelerator for Digital Drivetrain.

## Digital solutions for Drivetrain Design and Drivetrain Health

Combine the real and the digital worlds to reach the next level of efficiency and sustainability in your drivetrain value chain: with suitable digital solutions for drivetrain design and drivetrain health.

### Drivetrain Design:

Simplify and shorten the engineering steps to get faster and more efficiently from concept to the commissioned drivetrain.

### Drivetrain Health:

Reduce total cost of ownership for your equipment and machine park – energy, maintenance, down-time.

## Digitalization along the drivetrain value chain

### Dimension

Accurate in motion: Dimension your motors, gearboxes, and complete drivetrains digitally with greater precision – for greater reliability and energy efficiency.

### Simulate

Faster in motion: Add the Digital Twin of the drivetrain to your machine simulation to speed up your design and engineering phases and to accelerate your time to market!

### Connect

Data in motion: Acquire high-quality raw data and connect your entire drivetrains or machines to cloud or on-premise platforms – for a consistent and secure data flow.

### Optimize

Better in motion: Analyze and visualize drivetrain and machine data in digital solutions and apps to identify optimization potentials and concrete actionable measures how to tap it.

## Highlights

- Drive technology as entry point into digitalization
- Transparency along the complete drive train
- Virtualization, engineering tools, connectivity and analytics
- Cloud and Edge solutions
- Identification and implementation of optimization measures
- Development of new business and service models

Real Digital Twin of the the next generation of SINAMICS drives is available in DriveSim Engineer with functional and logical parts of the real firmware for even easier simulation of the drive response in engineering and commissioning phases before hardware is available.

# SINAMICS

## Drive Software

### The right function for every application

The SINAMICS Drive Software ensures that our SINAMICS variable frequency drives operate smoothly and reliably. It offers comprehensive functionality, is easily expandable and enables the greatest possible flexibility for a wide range of applications.

#### Easily expandable

The SINAMICS Software package comes with functionality to address many applications. However, the scope of performance can be further expanded using additional SINAMICS Drive Software options. These options allow the use of special added value or expansion functions.

#### Greatest flexibility

SINAMICS Drive Software options can be easily ordered together with SINAMICS drives. Additionally, SINAMICS Drive Software options can be tested free of charge for a limited period and then purchased later.

#### Comprehensive functionality

**SINAMICS Drive Software** enables highly accurate and dynamic control of different types of motors, and it offers functions for the following:

- Digitalization
- Safety Integrated
- Security Integrated
- Motor control
- Technology
- Energy efficiency
- Efficient engineering
- Application specific features

**Next  
Generation**

The next generation of SINAMICS variable frequency drives offers an integrated web-server with innovated functions for easy engineering and supporting data exchange with Startdrive. No additional devices or separate software is required.

Scan this code for more information about SINAMICS Drive Software

# Efficient engineering over the complete lifecycle

## Selection tools:

Our **SINAMICS Selector App** guides you to the right converter.

**Siemens Product Configurator (SPC)** helps you configure your drive and mechanical system.

**TIA Selection Tool (TST)** for simple drive engineering. Starting from your application, the tool supports you step-by-step when defining the mechanical system and when selecting and dimensioning drives, motors and gearboxes.

In addition to engineering results such as characteristics, technical data, installation drawings and dimension drawings, **SIZER** for Siemens Drives also calculates the performance and the load-dependent energy usage.

## **Simulation and virtualization with the Digital Twin**

Add the Digital Twin of the drivetrain to your machine simulation – speed up your design and engineering phase, while improving machine quality and robustness! **DriveSim Designer** and **DriveSim Engineer** are the ultimate solutions for designing, commissioning and optimizing your drive train system.

## Commissioning tools:

The **TIA Portal** includes SINAMICS Startdrive to intuitively integrate SINAMICS drives into automation landscapes. Perfect interaction between SINAMICS drives and SIMATIC controllers: The same operating concept, reduction of interfaces and the high level of user-friendliness make it possible to quickly integrate SINAMICS converters into the automation landscape and commission them using the TIA Portal.

The **integrated webserver** – simplicity revisited The webserver enables easy commissioning, operation and diagnostics, all of which are aligned to the actual drive functionality, with no additional software required. The parameter masks are already integrated in the drive. The device is directly accessed using the web browser with the web address of the device, for instance from a laptop.

Scan this code for more information about the engineering tools

# Safety Integrated – simply safe, twice as efficient

## Highlights

- **Certified system solution in compliance with the applicable standards**
- **Lower system costs due to fewer components and lower wiring costs**
- **Faster commissioning/maintenance**
- **Higher productivity through shorter downtimes**

With Safety Integrated in SINAMICS drives, you are not only selecting a safe technical solution, but you also benefit from perfect support relating to all safety issues. This starts with the seamless integration of safety technology in efficient motion control systems. This certified system offers valuable support in the workflow, such as engineering in the TIA Portal.

With the safety acceptance test integrated in the TIA-Portal/Startdrive, you can now validate the correct safety parameterization –and the safety activation test supports you when it comes to validating complete safety control circuits – extending from the sensor to the actuator.

Safety Integrated allows you to eliminate electromechanical components. For you, this means that you require less space in your control cabinet, and you can reduce your costs when it comes to stocking spare parts and maintenance. Further, there is no wear as shutdown is realized purely electronically. Even when safety functions respond, the drive remains connected to the line supply – and can still be fully diagnosed.

Customized safety concepts with Safety Integrated can be very easily implemented based on the safety-related communications via PROFIsafe. You benefit from higher productivity with minimized downtimes.

**Next  
Generation**

The next generation of SINAMICS drives is part of one Safety Integrated software platform with a common look and feel and functional response. The Safety Integrated functions in our drives are now certified according IEC 61800-5-SIL 3 and ISO 13849-1 Cat. 4 and PL e.

information about  
safety integrated

# Security Integrated – heightened data security for industrial plants and systems

With the new Security Integrated functions we are hardening SINAMICS drives and therefore also your machines against external cyber attacks.

## Highlight

- Keep systems and data safe with Security Integrated

Next  
Generation

The next generation of SINAMICS drives offers increased resilience to cyber-attacks with the Security Integrated concept.

information about  
industrial cybersecurity

# Efficient Motion Control – Time for other perspectives!

Industry is demanding more and more complex motion control solutions and robots. To meet these demands, machine builders must compensate the shortage of skilled workers, become more flexible in the face of increasing complexity, and ensure the safety of operators and machines. But how? With solutions for efficient motion control. Turn challenges into success!

## Benefit from efficient motion control in automation

Increase your flexibility in motion control projects with modular, standardized, and user-friendly engineering and operation.

Accelerate the time to market of your machines through parallelization and virtualization of work routines.

Test and validate applications in a virtual environment without hardware or physical prototypes.

## SAFETY

Ensure maximum machine and operator safety while maintaining productivity and flexibility.

Faster time to market, increasing functionality and complexity, and demands for safety and sustainability are major challenges for machine builders. Efficient motion control helps you build innovative machines faster and without costly prototyping, so you can more easily meet your customers' needs.

Scan this code for more information about Efficient Motion Control and ways to make motion control more efficient.

# Cutting edge services – to continuously improve your production environment

## Highlights

- **Increase efficiency:**  
Increase the overall efficiency of your plant, become more resource-efficient and sustainable, and improve quality with our service portfolio.
- **Reduce costs:**  
Our services help you minimize unplanned downtime, better plan service intervals, and cut overall maintenance costs.
- **Increase availability:**  
Digital services make fault analysis easier and speed up troubleshooting, which helps you increase the availability of your plant.
- **Save energy:**  
Increased production efficiency allows you to save energy, reduce CO<sub>2</sub> emissions, and boost overall plant sustainability.
- **Gain flexibility:**  
Use our services to make your plant production systems and processes more flexible and open to new technologies.
- **Reduce time to market:**  
Speed up your products' time to market with increased availability and fewer plant shutdowns.

## Digital Enterprise Services

Our services cover the complete life-cycle of the SINAMICS product family. We support you in achieving more efficient production, leveraging the opportunities provided by digitalization and at the same time reducing the total cost of ownership.

You benefit from spare part and repair services specific to your plant or system, as well as global support provided by our experienced service experts. This support is available locally, remotely, online, by telephone or through individual training courses.

With both traditional and digital service portfolios for motion control, we support you in your digital transformation journey while also addressing your strategic targets such as environmentally friendly production, resource efficiency and much more.

## Optimized service contracts

With an individual service contract, you can ensure that every component of your SINAMICS drive solution is checked, maintained and overhauled at precisely the right point in time. And, of course, replaced if necessary.

In addition, we can now offer customized maintenance packages, configured to optimally address your SINAMICS drive requirements through the [Siemens Industry Mall](#).

## Retrofit for Drive Systems

The latest SINAMICS technology is the perfect replacement for discontinued SIMOVERT MASTERDRIVES and MICROMASTER drives. We recommend replacing aging products. With Retrofit for Drives Systems you secure the availability of spare parts and critical product know-how, thus avoiding plant downtimes. This results in increased availability and total efficiency of the machines in your plant. Digital Enterprise Services is ready to support you in your migration strategy and plan your retrofit projects.

## Service Protect

We offer a 6 month free-of-charge extended warranty for SINAMICS drives.

Furthermore, you have the option of warranty cover your SINAMICS drive for up to seven and a half years, therefore guaranteeing continuous availability over the complete product lifecycle.

For more information and to find the Service Protect options available for your product, go to

[Service Protect](#)

Service Protect can also be added to your order using the [Siemens Product Configurator SPC](#)

## Highlights

- Compact for simple installation in the smallest space
- Simple commissioning and operator control
- Perfect integration in the automation environment
- Integrated safety technology

## Applications

Pumping/  
Ventilating/  
Compress-  
ing

Moving

Processing

# SINAMICS G120

Multifunctional. Combinable. Safety Integrated.

## Highlights

- High degree of flexibility and combinability
- Higher-level, standard safety concept
- Wide range of power ratings

## Applications

Pumping/  
Ventilating/  
Compress-  
ing

Moving

Processing

Positioning

## Modular design

## Highlights

- **Applications:** Pumps, fans, compressors, extruders, mixers, mills etc.
- **Service-friendly** thanks to device modules that are easy to access
- **100% line supply voltage** at the motor without any secondary effects
- **When required, with integrated** line harmonics filter and du/dt filter

## Applications

Pumping/  
Ventilating/  
Compress-  
ing

Moving

Processing

# SINAMICS G180

Multifunctional. Industry specific. Seamless across the system.

## Highlights

- Industry specific features such as du/dt filter and PTC evaluation
- Applications: Pumps, fans, extruders, compressors – also in hazardous zones
- Voltage levels: 400 V/500 V/690 V
- Line side: 6 to 24 pulse or LHF (Line Filter)
- ATEX-certified for motors in hazardous zones

## Applications

Pumping/  
Ventilating/  
Compress-  
ing

Moving

Processing

### Format

Built-in unit (compact)  
Cabinet unit, Cabinet Systems

### Drive concept

AC/AC

### Degree of protection

Compact devices: IP20 (optional IP21)  
  
Cabinet units/systems: IP21 (higher degrees of protection up to IP54 optional)/with water cooling, IP54

### Supply voltage/ power kW (hp)

**3AC 380 ... 480 V**

2.2 ... 200 kW, compact device; 250 ... 630 kW, cabinet unit

**3AC 480 ... 500 V**

2.2 ... 160 kW, compact device; 250 ... 800 kW, cabinet unit

**3AC 500 ... 690 V**

7.5 ... 200 kW, compact device; 250 ... 6600 kW, cabinet unit

### Energy recovery

No

### Control modes

V/f (linear, square law)  
Vector control with and without encoder (SLVC)  
Field-oriented control (FOC) with encoder and certification for explosion protection

### Ambient temperature

0 to 40 °C

### Line filter

Compact devices: with integrated line filter for environments according to IEC 61800-3 Category C2/C1 (optional)  
  
Cabinet units: with integrated line filter for environments according to IEC 61800-3 Category C3  
  
Compact devices, cabinet units for IT line systems: with integrated line filter for environments according to IEC 61800-3 Category C4

### Braking chopper

Yes

### Safety functions

STO, ATEX-certified PTC thermistor input for explosion-protected motors

### Communications

PROFIBUS DP, EtherNet/IP, Modbus TCP/IP, Modbus RTU, CANopen: PROFINET

### TIA Portal connected

No

### Commissioning tools

IMS

### Controllers

SIMATIC ET200/SIMATIC S7-1500, SIMATIC PCS 7

### Recommended motors

Innomotics GP/SD<sup>1</sup> (standard induction motors aluminum/cast iron)  
  
Innomotics TN<sup>1</sup> (trans-standard motors)  
  
Innomotics XP<sup>1</sup> (explosion-protected motors)

## Highlights

- The infrastructure drive for pump/fan applications in water/waste-water industries and building automation
- Seamless range of power ratings available in 9 frame sizes extending from 0.75 – 630 kW
- Simple selection and ordering using just one order number – and immediately ready to run
- Impressively efficient with specific industry and energy efficiency functions

## Applications

Pumping/  
Ventilating/  
Compress-  
ing

# SINAMICS G220

Efficient. Secure. Future proof.

## Highlights

- Efficient energy consumption with Clean Power technology (THDi < 5%) and optimal high-efficiency motor control.
- Efficient engineering via an integrated web server and Startdrive (TIA Portal).
- Secure technology with Safety and Security integrated functions, S2 redundancy, 3C3 coating, and IP55 / UL Type 12.

## Applications

Pumping/  
Ventilating/  
Compress-  
ing

# SINAMICS S120

Universal. Precise. Safety Integrated.

## Highlights

- Modular system for high performance
- High degree of scalability, flexibility, combinability
- SINAMICS S120 Chassis and SINAMICS S120 Cabinet Modules can be ordered in air and liquid cooled versions

## Applications

Processing Positioning

Machining Moving

# SINAMICS S150

Multifunctional. Precise. Capable of energy recovery.

## Highlights

- Modular system for high performance
- High degree of scalability, flexibility, combinability

## Applications

Processing

Moving

Positioning

## Highlights

- For simple and favorably-priced plant and system modernization
- Flexible expandability regarding both functionality and performance
- High power rating in a compact design
- High reliability of all components

## Applications

Moving

Processing

Pumping/  
Ventilating/  
Compressing

# SINAMICS G115D

Versatile. Rugged. Distributed.

## Highlights

- User friendly, modular solution with a new design for easy wiring, commissioning and service incl. dedicated features for conveyor technology
- Out-of-the-box concept for easy handling, fast set up and an extremely simple to operate design for applications with horizontal motion

## Applications

Moving

|                                                                      |                                                                                                                                                             |                                                                                       |

# **SINAMICS**

## **servo converters**

Precise and with a high  
dynamic performance

➤ **SERVO CONVERTERS**

# SINAMICS V90

Simple. Precise. System based.

## Highlights

- Optimized servo performance thanks to One-Button Tuning and real time auto tuning
- Complete and simple to operate solution for motion control applications
- Together with a SIMATIC controller, a strong team in the TIA Portal

<sup>1</sup> Not available for S200 Basic

## Highlights

- Optimized dynamic performance enabled by fast system response and high overload capacity
- Reduced space requirement thanks to compact design
- Easy engineering using Webserver, Startdrive

# SINAMICS S210

Versatile. Precise. Safety Integrated.

## Highlights

- Easy installation with One Cable Connection (OCC) and easy commissioning with One Button Tuning
- Basic and Extended Safety Integrated functionality via PROFIsafe
- SIMOTICS S-1FK2, S-1FT2 and S-1FS-2 motors for increased performance

<sup>1</sup> only for the new SINAMICS S210 (>= V.6.3)

The new SINAMICS S210 servo drive.  
More features, more possibilities.

# SINAMICS S120

Universal. Precise. Safety Integrated.

## Highlights

- Modular system for high performance
- High degree of scalability, flexibility, combinability

## Applications

Processing

Positioning
