

June 22-25 | Chicago, IL

Visit us at **AUTOMATE** 2026 booth 1214

Siemens is leading the Industrial AI revolution –
realizing tomorrow today.

Discover how to unlock the full potential of your manufacturing operations. Today's industries are evolving fast, and the winners are those who become more adaptable, autonomous, and digitally empowered. Many U.S. manufacturers are working with equipment that's five to thirty years old—but that legacy doesn't have to limit your future.

At the Siemens booth, you'll see how to transform existing operations into agile, competitive, future-ready production—without ripping and replacing your current assets. Learn how to overcome complexity, cost, integration hurdles, and risk with powerful software and automation working seamlessly together.

Visit booth 1214 to experience it firsthand—and don't miss the immersive eXplore mobile experience center, where cutting-edge industrial digitalization comes to life.

- Smart manufacturing
- Advanced machine engineering
- Co-Pilots for engineering, operation and maintenance
- The digital twin and advanced simulation tools
- IT/OT data integration and everything it can power
- Robotic integration
- AI predictive maintenance
- And much, much more...
