

Note to Resellers: Please pass on this document to your customer to avoid license breach and copyright infringements.

Third-Party Software Information for SORIS Driver v8.0

This product, solution or service ("Product") contains third-party software components listed in this document. These components are Open Source Software licensed under a license approved by the Open Source Initiative (www.opensource.org) or similar licenses as determined by SIEMENS ("OSS") and/or commercial or freeware software components. With respect to the OSS components, the applicable OSS license conditions prevail over any other terms and conditions covering the Product. The OSS portions of this Product are provided royalty-free and can be used at no charge.

If SIEMENS has combined or linked certain components of the Product with/to OSS components licensed under the GNU LGPL version 2 or later as per the definition of the applicable license, and if use of the corresponding object file is not unrestricted ("LGPL Licensed Module", whereas the LGPL Licensed Module and the components that the LGPL Licensed Module is combined with or linked to is the "Combined Product"), the following additional rights apply, if the relevant LGPL license criteria are met: (i) you are entitled to modify the Combined Product for your own use, including but not limited to the right to modify the Combined Product to relink modified versions of the LGPL Licensed Module, and (ii) you may reverse-engineer the Combined Product, but only to debug your modifications. The modification right does not include the right to distribute such modifications and you shall maintain in confidence any information resulting from such reverse-engineering of a Combined Product.

Certain OSS licenses require SIEMENS to make source code available, for example, the GNU General Public License, the GNU Lesser General Public License and the Mozilla Public License. If such licenses are applicable and this Product is not shipped with the required source code, a copy of this source code can be obtained by anyone in receipt of this information during the period required by the applicable OSS licenses by contacting the following address:

Siemens AG

Otto-Hahn-Ring 6
81739 München

Germany

Keyword: Open Source Request

Soris Driver v8.0

SIEMENS may charge a handling fee of up to 5 EUR to fulfill the request.

Warranty regarding further use of the Open Source Software:

SIEMENS' warranty obligations are set forth in your agreement with SIEMENS. SIEMENS does not provide any warranty or technical support for this Product or any OSS components contained in it if they are modified or used in any manner not specified by SIEMENS. The license conditions listed below may contain disclaimers that apply between you and the respective licensor. For the avoidance of doubt, SIEMENS does not make any warranty commitment on behalf of or binding upon any third party licensor.

1.2 Acknowledgements

1. Doug Gregor ported the documentation to the BoostBook format.
2. This library would not have happened without:

Christopher Kormanyos' C++ decimal number code.
Paul Bristow for patiently testing, and commenting on the library.
All the folks at GMP, MPFR and libtommath, for providing the "guts" that makes this library work.
"The Art Of Computer Programming", Donald E. Knuth, Volume 2: Seminumerical Algorithms, Third Edition (Reading, Massachusetts: Addison-Wesley, 1997), xiv+762pp. ISBN 0-201-89684-2

3. The idea of representing a type as multiple compile-time integers, and passing these integers across function boundaries using `sizeof()`, was taken from Steve Dewhurst's article "A Bitwise `typeof` Operator", CUJ 2002. This article can also be viewed online, at <http://www.semantics.org/localarchive.html>.

Special thank you to Paul Mensonides, Vesa Karvonen, and Aleksey Gurtovoy for the Boost Preprocessor Library and MPL. Without these two libraries, this `typeof` implementation would not exist.

The following people provided support, gave valuable comments, or in any other way contributed to the library development (in alphabetical order):

David Abrahams
Andrey Beliaikov
Joel de Guzman
Daniel James
Vesa Karvonen
Andy Little
Paul Mensonides
Alexander Nasonov
Tobias Schwinger
Martin Wille

4. The comprehensiveness of this library would not be possible without the existence of the indispensable resource that is the Pre-defined C/C++ Compiler Macros Project. It was, and continues to be, the primary source of the definitions that make up this library. Thanks to Bjorn Reese and all the volunteers that make that resource possible.

This library would be an incoherent mess if it weren't for Boost community that provided invaluable feedback for the eight years that it took to polish into a useable form. In particular I would like to thank: Mathias Gaunard, Robert Stewart, Joël Lamotte, Lars Viklund, Nathan Ridge, Artyom Beilis, Joshua Boyce, Gottlob Frege, Thomas Heller, Edward Diener, Dave Abrahams, Iain Denniston, Dan Price, Ioannis

Papadopoulos, and Robert Ramey. And thanks to Joel Falcou for managing the review of this library.

5. Christopher Kohlhoff and Peter Dimov made important contributions to the design. Comments and suggestions were also received from Pavel Vozenilek, Gennaro Prota, Dave Abrahams, Jeff Garland, Iain Hanson, Oliver Kowalke, and Oleg Abrosimov. Christopher Kohlhoff suggested several improvements to the <http://www.open-std.org/jtc1/sc22/wg21/docs/papers/2006/n2066.html> [N2066] paper. Johan Nilsson's comments led to several of the refinements in N2066.

6. The mathematical text has been typeset with Nisus Writer. Jens Maurer has helped with portability and standard adherence, and was the Review Manager for this library. More acknowledgements in the History section. Thank you to all who contributed to the discussion about this library.

7. I'd like to thank Agustín Bergé, Eugene Yakubovich, Giovanni Piero Deretta and especially Nat Goodspeed.

8. The author can be contacted at john - at - johnmaddock.co.uk; the home page for this library is at www.boost.org.

I am indebted to Robert Sedgewick's "Algorithms in C++" for forcing me to think about algorithms and their performance, and to the folks at boost for forcing me to think, period.

Eric Niebler, author of Boost.Expressive and the GRETA regular expression component, has shared several important ideas, in a series of long discussions.

Pete Becker, of Roundhouse Consulting, Ltd., has helped enormously with the standardisation proposal language.

The following people have all contributed useful comments or fixes: Dave Abrahams, Mike Allison, Edan Ayal, Jayashree Balasubramanian, Jan Bölsche, Beman Dawes, Paul Baxter, David Bergman, David Dennerline, Edward Diener, Peter Dimov, Robert Dunn, Fabio Forno, Tobias Gabrielsson, Rob Gillen, Marc Gregoire, Chris Hecker, Nick Hodapp, Jesse Jones, Martin Jost, Boris Krasnovskiy, Jan Hermelink, Max Leung, Wei-hao Lin, Jens Maurer, Richard Peters, Heiko Schmidt, Jason Shirk, Gerald Slacik, Scobie Smith, Mike Smyth, Alexander Sokolovsky, Hervé Poirier, Michael Raykh, Marc Recht, Scott VanCamp, Bruno Voigt, Alexey Voinov, Jerry Waldorf, Rob Ward, Lealon Watts, John Wismar, Thomas Witt and Yuval Yosef.

If I've missed your name off (I'm sure there are a few, just not who they are...) then please do get in touch.

I am also grateful to the manuals supplied with the Henry Spencer, PCRE, Perl and GNU regular expression libraries - wherever possible I have tried to maintain compatibility with these libraries and with the POSIX standard - the code however is entirely my own, including any bugs! I can absolutely guarantee that I will not fix any bugs I don't know about, so if you have any comments or spot any bugs, please get in touch.

9. I'd like to thank Alex Hagen-Zanker, Christopher Kormanyos, Conrad Poelman, Eugene Yakubovich, Giovanni Piero Deretta, Hartmut Kaiser, Jeffrey Lee Hellrung, Nat Goodspeed, Robert Stewart, Vicente J. Botet Escriba and Yuriy Krasnoschek.

Especially Eugene Yakubovich, Giovanni Piero Deretta and Vicente J. Botet Escriba contributed many good ideas during the review.

10. The following people have provided valuable feedback and suggestions during the development of the library: Ion Gaztañaga, Janek Kozicki, Tobias Schwinger, Pavel Vozenilek. Simon Atanasyan contributed a workaround for a problem with Sun Studio compilers. Rosa Bernárdez has proofread the documentation from the first drafts up to its present form.

The acceptance review of Boost.Flyweight took place between January 21st and February 3rd 2008. Many thanks to Ion Gaztañaga, the stalwart review manager, and to all the reviewers: Alberto Ganesh Barbati, Tim Blechmann, Vicente Juan Botet Escribá, Matías Capeletto, Neil Hunt, Marcus Lindblom, John Reid, David Sankel, Kevin Sopp, John

Torjo, Markus Werle. Alberto identified important limitations of the initial design, which led to the introduction of key-value flyweights.

Boost.Flyweight relies on the Boost MPL Library from Aleksey Gurtovoy. The free-order template parameter interface offered by the library has been implemented with the Boost Parameter Library from David Abrahams and Daniel Wallin. Ion Gaztañaga's Boost Interprocess Library is the core element behind the `intermodule_holder` component.

This work is dedicated to Jorge López, in the hope that past dire straits gentler oceans will lie.

Boost 1.39 release

Many thanks to Tim Blechmann for helping identify and solve a serious thread safety problem and to Peter Dimov for kindly extending the interface of his `boost::detail::atomic_count` utility to allow for the implementation of the fix.

Boost 1.57 release

Boost.Flyweight serialization uses the newly introduced helper support functionality of the Boost Serialization Library from Robert Ramey. Without helper support, serialization of flyweights would have been unacceptably costly in terms of archive space consumption.

11. Many thanks to Julian Gonggrijp, Rob Stewart, Andrzej Krzemienski, Matus Chochlik, Jeroen Habraken, Hartmut Kaiser, Joel De Guzman, Thijs (M.A.) van den Berg, Roland Bock, Gavin Lambert, Paul Bristow, Alex Hagen-Zanker, Christopher Kormanyos for taking part in the Boost.Convert review and their valuable input.

Special thanks to:

Alex Hagen-Zanker, Roland Bock, Rob Stewart for their considerable and continuous contributions to the design and implementation of the library;
Andrzej Krzemienski for helping to partition responsibilities and to ultimately pave the way for the `boost::optional` and `std::tr2::optional` deployment;
Edward Diener the Boost Review Manager for helping with the converters' design, his continuous involvement, technical and administrative help, guidance and advice;
Joel De Guzman, Rob Stewart and Alex Hagen-Zanker for making sure the performance tests work as they should;
Paul Bristow for helping great deal with the documentation;
Kevlin Henney and Dave Abrahams for their `lexical_cast`-related insights and explanations.

12. Beman Dawes provided the original `config.hpp` and part of this document.

Vesa Karvonen provided a description of the principles (see rationale) and put together an early version of the current configuration setup.

John Maddock put together the configuration current code, the test programs, the configuration script and the reference section of this document.

Matias Capeletto converted the docs to quickbook format.

Numerous boost members, past and present, have contributed fixes to boost's configuration.

13. Fernando Cacciola, Darren Cook, Beman Dawes, Jeremy Maitin-Shepard and Daryle Walker from the Boost mailing list provided useful suggestions for improvement on the first alpha releases of the library. Gang Wang discovered several bugs in the code. Thomas Wenisch brought out the idea of "sequence sets" from which sequenced indices were designed. Giovanni Bajo, Chris Little and Maxim Yegorushkin tested the library on several platforms. Daniel Wallin contributed fixes for MSVC++ 7.0. Ron Liechty and the support staff at Metrowerks provided assistance during the porting of the library to CW 8.3. Porting to VisualAge 6.0 counted on Toon Knapen's help. Markus Schöpflin aided with Compaq C++ 6.5 and GCC for Tru64 UNIX. Rosa Bernárdez proofread the last versions of the tutorial.

Pavel Vozenilek has been immensely helpful in thoroughly reviewing every single bit of the library, and he also suggested several extra functionalities, most notably range querying, safe mode, polymorphic key extractors and MPL support. Thank you!

The Boost acceptance review took place between March 20th and 30th 2004. Pavel Vozenílek was the review manager. Thanks to all the people who participated and specially to those who submitted reviews: Fredrik Blomqvist, Tom Brinkman, Paul A Bristow, Darren Cook, Jeff Garland, David B. Held, Brian McNamara, Gary Powell, Rob Stewart, Arkadiy Vertleyb, Jörg Walter. Other Boost members also contributed ideas, particularly in connection with the library's naming scheme: Pavol Droba, Dave Gomboc, Jeremy Maitin-Shepard, Thorsten Ottosen, Matthew Vogt, Daryle Walker. My apologies if I inadvertently left somebody out of this list.

Boost.MultiIndex could not have been written without Aleksey Gurtovoy et al. superb Boost MPL Library. Also, Aleksey's techniques for dealing with ETI-related problems in MSVC++ 6.0 helped solve some internal issues of the library.

The internal implementation of red-black trees is based on that of SGI STL `stl_tree.h` file:

Copyright (c) 1996,1997 Silicon Graphics Computer Systems, Inc.

Permission to use, copy, modify, distribute and sell this software and its documentation for any purpose is hereby granted without fee, provided that the above copyright notice appear in all copies and that both that copyright notice and this permission notice appear in supporting documentation. Hewlett-Packard Company makes no representations about the suitability of this software for any purpose. It is provided "as is" without express or implied warranty.

I would like to dedicate this piece of work to Rosa Bernárdez, my very first C++ teacher, for her unconditional support in many endeavors of which programming is by no means the most important. In memory of my cat López (2001-2003): he lived too fast, died too young.

Boost 1.33 release

Many thanks again to Pavel Vozenílek, who has carefully reviewed the new material and suggested many improvements. The design of hashed indices has benefited from discussions with several Boost members, most notably Howard Hinnant and Daniel James. Daniel has also contributed Boost.Hash to the community: hashed indices depend on this library as their default hash function provider. Robert Ramey's Boost Serialization Library provides the very solid framework upon which Boost.MultiIndex serialization capabilities are built. Toon Knapen helped adjust the library for VisualAge 6.0. Markus Schöpflin provided a Jamfile tweak for GCC under Tru64 UNIX.

Boost 1.34 release

Thanks go to Pavel Vozenílek for his useful comments and suggestions during the development of this release, and to Rosa Bernárdez for reviewing the new material in the documentation. Alo Sarv suggested a notational improvement in the specification of partial searches with composite keys. Maxim Yegorushkin proposed a valuable spatial optimization for ordered indices and provided figures of its impact on performance for containers with large numbers of elements. Caleb Epstein performed the tests under MSVC++ 8.0 described in the performance section. The following people have reported bugs and problems with previous versions and prereleases of the library: Alexei Alexandrov, Matías Capeletto, John Eddy, Martin Eigel, Guillaume Lazzara, Felipe Magno de Almeida, Julien Pervillé, Hubert Schmid, Toby Smith.

New member in the family! Thanks to Héctor for his patience during long development sessions and his occasional contributions to the source codebase.

Boost 1.35 release

`global_fun` was included after a proposal by Markus Werle. Bruno Martínez Aguerre suggested the inclusion of `iterator_to`. The rollback versions of `modify` and `modify_key` arose from discussions with Matías Capeletto. Steven Watanabe spotted an include guard bug present from the first release of the library.

Boost 1.36 release

Thanks to Amit Jain for reporting a problem with allocator management. Michael Fawcett proposed the addition of an allocator constructor to `multi_index_container`. A report from Zachary Zhou has led to enhancing the behavior of hashed indices update functions so that they meet some intuitive expectations. Grzegorz Jakacki spotted some internal dead code.

Boost 1.56 release

Stephen Kelly has contributed the removal of workaround code for old compilers no longer supported.

14. Many, many thanks to the Boost peers, notably Jeff Garland, Beman Dawes, Ed Brey, Gary Powell, Peter Dimov, and Jens Maurer for providing helpful suggestions!

15. The following people have provided valuable feedback and suggestions during the development of the library: Ion Gaztañaga, Janek Kozicki, Tobias Schwinger, Pavel Vozenilek. Simon Atanasyan contributed a workaround for a problem with Sun Studio compilers. Rosa Bernárdez has proofread the documentation from the first drafts up to its present form.

The acceptance review of Boost.Flyweight took place between January 21st and February 3rd 2008. Many thanks to Ion Gaztañaga, the stalwart review manager, and to all the reviewers: Alberto Ganesh Barbati, Tim Blechmann, Vicente Juan Botet Escribá, Matías Capeletto, Neil Hunt, Marcus Lindblom, John Reid, David Sankel, Kevin Sopp, John Torjo, Markus Werle. Alberto identified important limitations of the initial design, which led to the introduction of key-value flyweights.

Boost.Flyweight relies on the Boost MPL Library from Aleksey Gurtovoy. The free-order template parameter interface offered by the library has been implemented with the Boost Parameter Library from David Abrahams and Daniel Wallin. Ion Gaztañaga's Boost Interprocess Library is the core element behind the `intermodule_holder` component.

This work is dedicated to Jorge López, in the hope that past dire straits gentler oceans will lie.

Boost 1.39 release

Many thanks to Tim Blechmann for helping identify and solve a serious thread safety problem and to Peter Dimov for kindly extending the interface of his `boost::detail::atomic_count` utility to allow for the implementation of the fix.

Boost 1.57 release

Boost.Flyweight serialization uses the newly introduced helper support functionality of the Boost Serialization Library from Robert Ramey. Without helper support, serialization of flyweights would have been unacceptably costly in terms of archive space consumption.

16. Special thanks to:

Paul Mensonides for his invaluable help while developing the macro expansion engine and his insightful tips. He developed the recursive macro expansion algorithm implemented herein and also contributed most of the small testcases used for testing the correctness of the macro expansion.

Dan Nuffer, who wrote the initial Re2C based C++ lexer and the Slex (Spirit Lex) scanner generator sample.

Martin Wille for helping with the port to Linux, testing on Linux and for contributing the automated test scripts.

Vladimir Prus for helping with the command line and config file options analysis for the Wave driver executable.

Juan Carlos Arevalo-Baeza, who wrote the Spirit `cpp_lexer` sample, from which are taken some ideas.

Andrei Alexandrescu for allowing to use his `flex_string` class, a policy based `std::basic_string<>` compatible string implementation.

Reece Dunn, Vesa Karvonen, Faisal Vali, Porter Schermerhorn, Juergen Hunold, Jozsef Mihalicza and Daniel Fontijne for reporting several problems and bugs.

Tarmo Pikaro for reporting several bug while compiling specific headers from the Microsoft Windows SDK.

Rob Stewart helped a lot with proof reading the documentation.

Stefan Seefeld for integrating Wave into his Synopsis library and finding a couple of bugs along the way.

Andreas Sæbjørnsen and Felipe Magno de Almeida for suggesting some extensions and corrections to the Wave preprocessing hook interface and related testing.

Tobias Schwinger for suggesting the 'pragma wave option(output:...)' and '#pragma message(...)' functionalities and reporting a couple of bugs.

Richard Guenther for fixing a nasty buffer overrun problem in the Re2C lexer.

Danny Havenith for contributing his partial C++ parser hannibal as a sample to Wave.

and last but not least

Joel de Guzman for nudging me into this adventure and for his work on the Spirit parser framework, without which the Wave library wouldn't have been possible.

Special thanks also to people who gave feedback and valuable comments, particularly members of Boost and Spirit mailing lists. This includes all those who participated in the Boost review:

Tom Brinkman (who volunteered to be the review manager), David Abrahams, Beman Dewes, Reece Dunn, Larry Evans, Doug Gregor, Joel de Guzman, Baptiste Lepilleur, Andy Little, Paul Mensonides, Dan Nuffer, Andreas Pokorny, Vladimir Prus, Gennadiy Rozental, Michiel Salters, Jonathan Turkanis, Chris Uzdavinis, Pavel Vozenilek, Michael Walter

The Wave library uses the following Boost [8] libraries:

Boost Spirit (LL parser framework that represents parsers directly as EBNF grammars in inlined C++)

Boost Iterator Adaptor Library (Adapt a base type into a standard conforming iterator)

Boost Filesystem Library (Portable paths, iteration over directories, and other useful filesystem operations)

Boost Program options and arguments library

and other small parts of different Boost libraries.

17. I'd like to thank Alex Hagen-Zanker, Christopher Kormanyos, Conrad Poelman, Eugene Yakubovich, Giovanni Piero Deretta, Hartmut Kaiser, Jeffrey Lee Hellrung, Nat Goodspeed, Robert Stewart, Vicente J. Botet Escriba and Yuriy Krasnoschek.

Especially Eugene Yakubovich, Giovanni Piero Deretta and Vicente J. Botet Escriba contributed many good ideas during the review.

18. I'd like to thank Agustín Bergé, Eugene Yakubovich, Giovanni Piero Deretta and especially Nat Goodspeed.

19. I'd like to thank Adreas Fett, Artyom Beilis, Daniel Larimer, David Deakins, Evgeny Shapovalov, Fernando Pelliccioni, Giovanni Piero Deretta, Gordon Woodhull, Helge Bahmann, Holger Grund, Jeffrey Lee Hellrung (Jr.), Keith Jeffery, Martin Husemann, Phil Endecott, Robert Stewart, Sergey Cheban, Steven Watanabe, Vicente J. Botet Escriba, Wayne Piekarski.

20. Many, many people in one or another way contributed to the library development. The list below is known to be incomplete and needs updating! We sincerely promise to fix it in the near future.

For bug reports, patches, suggestions and insightful discussions, our thanks go to:

John Bandela
Fernando Cacciola
Peter Dimov
Eric Friedman
Arnaldur Gylfason
David B. Held
Vesa Karvonen
Mat Marcus
Hamish Mackenzie
Paul Mensonides
Emily Winch

21. The following are a few acknowledgements of people that contributed to or were instrumental in the development of the library by Vesa Karvonen and myself.

Vesa Karvonen

The original idea of passing two extra parameters to REPEAT, which makes it possible to create preprocessor code on top of it, was due to Aleksey Gurtovoy. The invokeable IDENTITY macro was invented by him. He also suggested the name for the library. Many thanks to Aleksey for his insights!

Thanks to everyone who participated in the review: David Abrahams, Beman Dawes, Ronald Garcia, Douglas Gregor, Aleksey Gurtovoy, Jeremy Siek, and Daryle Walker.

Thanks to Chris Little and Mat Marcus for providing help with MWCW.

The original automatic recursion technique, which makes many of the library primitives easier to use, was invented by Paul Mensonides.

The PREPROCESSOR library has been developed by Vesa Karvonen.

Paul Mensonides

Thanks to Vesa Karvonen for the original conception of the library. His work, his help, and his opinions are all much appreciated.

Thanks also to David Abrahams for his observations and continued support.

The help of several other Boost developers is also greatly appreciated. In particular, thanks to Aleksey Gurtovoy for his suggestions and to Ralf W. Grosse-Kunstleve for providing access to several compilers for testing.

22. Boost Test Team

Boost.Test 3.0 is being developed and maintained by Gennadiy Rozental and Raffi Enficiaud.

New documentation

Raffi Enficiaud and Andrzej Krzemienski efforts were a driving force behind the Boost.Test documentation overhaul.

Second incarnation including the Unit Test Framework

Beman Dawes and Ullrich Koethe started the library. Fernando Cacciola, Jeremy Siek, Beman Dawes, Ullrich Koethe, Dave Abrahams suggested numerous improvements during the Formal Review. Jeremy Siek was the review manager. Beman Dawes was a great help in both final testing and merging library with rest of the boost. Gennadiy Rozental was the developer and maintainer.

Original Test Library

Ed Brey, Kevlin Henney, Ullrich Koethe, and Thomas Matelich provided very helpful comments during development. Dave Abrahams, Ed Brey, William Kempf, Jens Maurer, and Wilka suggested numerous improvements during the Formal Review. Jens Maurer was the review manager. Beman Dawes is the developer and maintainer.

23. I'd like to thank Alex Hagen-Zanker, Christopher Kormanyos, Conrad Poelman, Eugene Yakubovich, Giovanni Piero Deretta, Hartmut Kaiser, Jeffrey Lee Hellrung, Nat Goodspeed, Robert Stewart, Vicente J. Botet Escriba and Yuriy Krasnoschek.

Especially Eugene Yakubovich, Giovanni Piero Deretta and Vicente J. Botet Escriba contributed many good ideas during the review.

24. Beman Dawes provided the original config.hpp and part of this document.

Vesa Karvonen provided a description of the principles (see rationale) and put together an early version of the current configuration setup.

John Maddock put together the configuration current code, the test programs, the configuration script and the reference section of this document.

Matias Capeletto converted the docs to quickbook format.

Numerous boost members, past and present, have contributed fixes to boost's configuration.

25. The mathematical text has been typeset with Nisus Writer. Jens Maurer has helped with portability and standard adherence, and was the Review Manager for this library. More acknowledgements in the History section. Thank you to all who contributed to the discussion about this library.

26. Special thanks to:

Paul Mensonides for his invaluable help while developing the macro expansion engine and his insightful tips. He developed the recursive macro expansion algorithm implemented herein and also contributed most of the small testcases used for testing the correctness of the macro expansion.

Dan Nuffer, who wrote the initial Re2C based C++ lexer and the Slex (Spirit Lex) scanner generator sample.

Martin Wille for helping with the port to Linux, testing on Linux and for contributing the automated test scripts.

Vladimir Prus for helping with the command line and config file options analysis for the Wave driver executable.

Juan Carlos Arevalo-Baeza, who wrote the Spirit `cpp_lexer` sample, from which are taken some ideas.

Andrei Alexandrescu for allowing to use his `flex_string` class, a policy based `std::basic_string<>` compatible string implementation.

Reece Dunn, Vesa Karvonen, Faisal Vali, Porter Schermerhorn, Juergen Hunold, Jozsef Mihalicza and Daniel Fontijne for reporting several problems and bugs.

Tarmo Pikaro for reporting several bug while compiling specific headers from the Microsoft Windows SDK.

Rob Stewart helped a lot with proof reading the documentation.

Stefan Seefeld for integrating Wave into his Synopsis library and finding a couple of bugs along the way.

Andreas Sæbjørnsen and Felipe Magno de Almeida for suggesting some extensions and corrections to the Wave preprocessing hook interface and related testing.

Tobias Schwinger for suggesting the `'pragma wave option(output:...)'` and `'#pragma message(...)'` functionalities and reporting a couple of bugs.

Richard Guenther for fixing a nasty buffer overrun problem in the Re2C lexer.

Danny Havenith for contributing his partial C++ parser `hannibal` as a sample to Wave.

and last but not least

Joel de Guzman for nudging me into this adventure and for his work on the Spirit parser framework, without which the Wave library wouldn't have been possible.

Special thanks also to people who gave feedback and valuable comments, particularly members of Boost and Spirit mailing lists. This includes all those who participated in the Boost review:

Tom Brinkman (who volunteered to be the review manager), David Abrahams, Beman Dewes, Reece Dunn, Larry Evans, Doug Gregor, Joel de Guzman, Baptiste Lepilleur, Andy Little, Paul Mensonides, Dan Nuffer, Andreas Pokorny, Vladimir Prus, Gennadiy Rozental, Michiel Salters, Jonathan Turkanis, Chris Uzdavinis, Pavel Vozenilek, Michael Walter

The Wave library uses the following Boost [8] libraries:

Boost Spirit (LL parser framework that represents parsers directly as EBNF grammars in inlined C++)

Boost Iterator Adaptor Library (Adapt a base type into a standard conforming iterator)

Boost Filesystem Library (Portable paths, iteration over directories, and other useful filesystem operations)

Boost Program options and arguments library

and other small parts of different Boost libraries.

27. Many, many people in one or another way contributed to the library development. The list below is known to be incomplete and needs updating! We sincerely promise to fix it in the near future.

For bug reports, patches, suggestions and insightful discussions, our thanks go to:

John Bandela
Fernando Cacciola
Peter Dimov
Eric Friedman
Arnaldur Gylfason
David B. Held
Vesa Karvonen
Mat Marcus
Hamish Mackenzie
Paul Mensonides
Emily Winch

28. Thomas Witt in 2002 produced a prototype called cyclic buffer.

The circular buffer has a short history. Its first version was a `std::deque` adaptor. This container was not very effective because of many reallocations when inserting/removing an element. Thomas Wenish did a review of this version and motivated me to create a circular buffer which allocates memory at once when created.

The second version adapted `std::vector` but it has been abandoned soon because of limited control over iterator invalidation. The current version is a full-fledged STL compliant container.

Pavel Vozenilek did a thorough review of this version and came with many good ideas and improvements.

The idea of the space optimized circular buffer has been introduced by Pavel Vozenilek.

Also, I would like to thank Howard Hinnant, Nigel Stewart and everyone who participated at the formal review for valuable comments and ideas.

Paul A. Bristow refactored the documentation in 2013 to use the full power of Quickbook, Doxygen and Autoindexing.

29. The first Boost.Process draft was created in 2006. A lot of people have worked on various drafts since then. Especially Merino Vidal, Ilya Sokolov and Felipe Tanus spent a lot of time working on early drafts. They influenced Boost.Process over the years and wrote code which, to various extents, is still around in the library today.

The design of earlier versions of Boost.Process was not always satisfying. In 2011 Jeff Flinn proposed the executor and initializer concepts Boost.Process is based on today. Without Jeff's idea the overall design of Boost.Process would not look like it does today.

A special thank you goes to Intra2net AG (especially Thomas Jarosch) who sponsored a project to support the development of Boost.Process. It was this sponsorship which made it possible to create a new Boost.Process version in 2012.

Great thanks also goes to Boris Schaeling, who despite having boost.process rejected, went on to work on it and maintained it up until this day and participated in the development of the current version.

30. Boost.Accumulators represents the efforts of many individuals. I would like to thank Daniel Egloff of Zürcher Kantonalbank for helping to conceive the library and realize its implementation. I would also like to thank David Abrahams and Matthias Troyer for their key contributions to the design of the library. Many thanks are due to Michael Gauckler and Olivier Gygi, who, along with Daniel Egloff, implemented many of the statistical accumulators.

I would also like to thank Simon West for all his assistance maintaining Boost.Accumulators.

Finally, I would like to thank Zürcher Kantonalbank for sponsoring the work on Boost.Accumulators and graciously donating it to the community.

31. I'd like to thank Adreas Fett, Artyom Beilis, Daniel Larimer, David Deakins, Evgeny Shapovalov, Fernando Pelliccioni, Giovanni Piero Deretta, Gordon Woodhull, Helge Bahmann, Holger Grund, Jeffrey Lee Hellrung (Jr.), Keith Jeffery, Martin Husemann, Phil Endecott, Robert Stewart, Sergey Cheban, Steven Watanabe, Vicente J. Botet Escriba, Wayne Piekarski.

32. In order of helping and advising:

Peter Dimov for writing source codes in late 2007, that gave me an idea of how to emulate RTTI.
Agustín Bergé K-ballo for helping with docs and fixing a lot of typos.
Niall Douglas for generating a lot of great ideas, reviewing the sources and being the review manager for the library.
All the library reviewers, especially Andrey Semashev, for making good notes and proposing improvements to the library.

33. I'd like to thank Alex Hagen-Zanker, Christopher Kormanyos, Conrad Poelman, Eugene Yakubovich, Giovanni Piero Deretta, Hartmut Kaiser, Jeffrey Lee Hellrung, Nat Goodspeed, Robert Stewart, Vicente J. Botet Escriba and Yuriy Krasnoschek.

Especiallly Eugene Yakubovich, Giovanni Piero Deretta and Vicente J. Botet Escriba contributed many good ideas during the review.

34. Thomas Witt in 2002 produced a prototype called cyclic buffer.

The circular_buffer has a short history. Its first version was a std::deque adaptor. This container was not very effective because of many reallocations when inserting/removing an element. Thomas Wenish did a review of this version and motivated me to create a circular buffer which allocates memory at once when created.

The second version adapted std::vector but it has been abandoned soon because of limited control over iterator invalidation. The current version is a full-fledged STL compliant container.

Pavel Vozenilek did a thorough review of this version and came with many good ideas and improvements.

The idea of the space optimized circular buffer has been introduced by Pavel Vozenilek.

Also, I would like to thank Howard Hinnant, Nigel Stewart and everyone who participated at the formal review for valuable comments and ideas.

Paul A. Bristow refactored the documentation in 2013 to use the full power of Quickbook, Doxygen and Autoindexing.

35. Thanks go to the following people for supporting the development of this library in one or the other way:

David Abrahams
Tom Brinkman

Aleksey Gurtovoy
Jody Hagins
Hartmut Kaiser
Andy Little
John Maddock
Paul Mensonides
Alexander Nasonov
Richard Smith
Rob Stewart
Jonathan Turkanis
Pavel Vozenilek
Steven Watanabe
K. Noel Belcourt

36. Boost.Accumulators represents the efforts of many individuals. I would like to thank Daniel Egloff of Zürcher Kantonalbank for helping to conceive the library and realize its implementation. I would also like to thank David Abrahams and Matthias Troyer for their key contributions to the design of the library. Many thanks are due to Michael Gauckler and Olivier Gygi, who, along with Daniel Egloff, implemented many of the statistical accumulators.

I would also like to thank Simon West for all his assistance maintaining Boost.Accumulators.

Finally, I would like to thank Zürcher Kantonalbank for sponsoring the work on Boost.Accumulators and graciously donating it to the community.

37. Boost.Egg: A very powerful library for function objects in C++98.
Shunsuke Sogame
Boost.Hana: A metaprogramming library with many functional constructs
Louis Dionne
named-operators: A library to create named operators
Konrad Rudolph
Pack/Unpack without Using Tuple

Sean Parent
Suggested Design for Customization Points
Eric Niebler
FC++: Functional Programming in C++
Brian McNamara and Yannis Smaragdakis
Boost.Phoenix
Joel de Guzman, Dan Marsden, Thomas Heller, and John Fletcher

38. This library is based on the design by Peter Dimov. During the initial development Joaquín M López Muñoz made many useful suggestions and contributed fixes.

The formal review was managed by Thorsten Ottosen, and the library reviewed by: David Abrahams, Alberto Barbati, Topher Cooper, Caleb Epstein, Dave Harris, Chris Jefferson, Bronek Kozicki, John Maddock, Tobias Swinger, Jaap Suter, Rob Stewart and Pavel Vozenilek. Since then, further constructive criticism has been made by Daniel Krügler, Alexander Nasonov and ???.

The implementation of the hash function for pointers is based on suggestions made by Alberto Barbati and Dave Harris. Dave Harris also suggested an important improvement to `boost::hash_combine` that was taken up.

Some useful improvements to the floating point hash algorithm were suggested by Daniel Krügler.

The original implementation came from Jeremy B. Maitin-Shepard's hash table library, although this is a complete rewrite.

39. Pre-formal review
Peter Dimov suggested the name 'optional', and was the first to point out the need for aligned storage.
Douglas Gregor developed 'type_with_alignment', and later Eric Friedman coded 'aligned_storage', which are the core of the optional class implementation.

Andrei Alexandrescu and Brian Parker also worked with aligned storage techniques and their work influenced the current implementation. Gennadiy Rozental made extensive and important comments which shaped the design. Vesa Karvonen and Douglas Gregor made quite useful comparisons between optional, variant and any; and made other relevant comments. Douglas Gregor and Peter Dimov commented on comparisons and evaluation in boolean contexts. Eric Friedman helped understand the issues involved with aligned storage, move/copy operations and exception safety. Many others have participated with useful comments: Aleksey Gurotov, Kevlin Henney, David Abrahams, and others I can't recall.

Post-formal review

William Kempf carefully considered the originally proposed interface and suggested the new interface which is currently used. He also started and fueled the discussion about the analogy optional</>/smart pointer and about relational operators.

Peter Dimov, Joel de Guzman, David Abrahams, Tanton Gibbs and Ian Hanson focused on the relational semantics of optional (originally undefined); concluding with the fact that the pointer-like interface doesn't make it a pointer so it shall have deep relational operators.

Augustus Saunders also explored the different relational semantics between optional<> and a pointer and developed the OptionalPointee concept as an aid against potential conflicts on generic code.

Joel de Guzman noticed that optional<> can be seen as an API on top of variant<T,nil_t>.

Dave Gomboc explained the meaning and usage of the Haskell analog to optional<>: the Maybe type constructor (analogy originally pointed out by David Sankel).

Other comments were posted by Vincent Finn, Anthony Williams, Ed Brey, Rob Stewart, and others.

Joel de Guzman made the case for the support of references and helped with the proper semantics.

Mat Marcus shown the virtues of a value-oriented interface, influencing the current design, and contributed the idea of "none".

Vladimir Batov's design of Boost.Convert library motivated the development of value accessors for optional: functions value, value_or, value_or_eval.

40. The format and language of this reference documentation has been greatly influenced by the SGI's Standard Template Library Programmer's Guide.

41. This library would never have been created without inspiration, collaboration and constructive criticism from multiple sources.

David LeBlanc

This library is inspired by David LeBlanc's SafeInt Library . I found this library very well done in every way and useful in my embedded systems work. This motivated me to take it to the "next level".

Andrzej Krzemienski

Andrzej Commented and reviewed the library as it was originally posted on the Boost Library Incubator. The consequent back and forth motivated me to invest more effort in developing documentation and examples to justify the utility, indeed the necessity, for this library. He also noted many errors in code, documentation, and tests. Without his interest and effort, I do not believe the library would have progressed beyond its initial stages.

Boost

As always, the Boost Developer's mailing list has been the source of many useful observations from potential users and constructive criticism from very knowledgeable developers. During the Boost formal review, reviews and comments were posted by the following persons:

Paul A. Bristow

Steven Watanabe

John Maddock

Antony Polukhin

Barrett Adair

Vicente J. Botet Escriba

John McFarlane

Peter Dimov

42. Alexander Nasonov is the original library author.

Lorenzo Caminiti added variadic macro support, capture of the object `this_`, empty captures using `void`, and `BOOST_SCOPE_EXIT_ALL`.

Thanks to the following people (in chronological order):

Maxim Yegorushkin for sharing code where he used a local struct to clean up resources;

Andrei Alexandrescu for pointing out the `scope(exit)` construct of the D programming language;

Pavel Vozenilek and Maxim Yanchenko for reviews of early drafts of the library;

Steven Watanabe for his valuable ideas;

Jody Hagins for good comments that helped to significantly improve the documentation;

Richard Webb for testing the library on MSVC compiler;

Adam Butcher for a workaround to error C2355 when deducing the type of `this` on some MSVC versions.

43. Matthias C. Schabel would like to acknowledge the Department of Defense for its support of this work under the Prostate Cancer Research Program New Investigator Award W81XWH-04-1-0042 and the National Institutes of Health for their support of this work under the NIBIB Mentored Quantitative Research Development Award K25EB005077.

Thanks to David Walthall for his assistance in debugging and testing on a variety of platforms and Torsten Maehne for his work on interfacing the Boost Units and Boost Lambda libraries.

Thanks to:

Paul Bristow,
Michael Fawcett,
Ben FrantzDale,
Ron Garcia,
David Greene,
Peder Holt,
Janek Kozicki,
Andy Little,
Kevin Lynch,
Torsten Maehne
Noah Roberts,
Andrey Semashev,
David Walthall,
Deane Yang,

and all the members of the Boost mailing list who provided their input into the design and implementation of this library.

44. [Boost.Egg] (<http://p-stade.sourceforge.net/boost/libs/egg/doc/html/index.html>): A very powerful library for function objects in C++98.

45. Original standard container code comes from SGI STL library, which enhanced the original HP STL code. Code was rewritten for Boost.Interprocess and moved to Boost.Intrusive. Many thanks to Alexander Stepanov, Meng Lee, David Musser, Matt Austern... and all HP and SGI STL developers.

flat_[multi]_map/set containers were originally based on Loki's AssocVector class. Code was rewritten and expanded for Boost.Interprocess, so thanks to Andrei Alexandrescu.

stable_vector was invented and coded by Joaquín M. López Muñoz, then adapted for Boost.Interprocess. Thanks for such a great container.

static_vector was based on Andrew Hundt's and Adam Wulkiewicz's high-performance varray class. Many performance improvements of vector were also inspired by their implementation. Thanks!

Howard Hinnant's help and advices were essential when implementing move semantics, improving allocator support or implementing small string optimization. Thanks Howard for your wonderful standard library implementations.

And finally thanks to all Boosters who helped all these years, improving, fixing and reviewing all my libraries.

46. Many people have contributed with ideas and revisions, so this is the place to thank them:

Thanks to all people who have shown interest in the library and have downloaded and tested the snapshots.

Thanks to Francis Andre and Anders Hybertz for their ideas and suggestions. Many of them are not implemented yet but I hope to include them when library gets some stability.

Thanks to Matt Doyle, Steve LoBasso, Glenn Schrader, Hiang Swee Chiang, Phil Endecott, Rene Rivera, Harold Pirtle, Paul Ryan, Shumin Wu, Michal Wozniak, Peter Johnson, Alex Ott, Shane Guillory, Steven Wooding and Kim Barrett for their bug fixes and library testing.

Thanks to Martin Adrian who suggested the use of Interprocess framework for user defined buffers.

Thanks to Synge Todo for his boostbook-doxygen patch to improve Interprocess documentation.

Thanks to Olaf Krzikalla for his Intrusive library. I have taken some ideas to improve red black tree implementation from his library.

Thanks to Daniel James for his unordered_map/set family and his help with allocators. His great unordered implementation has been a reference to design exception safe containers.

Thanks to Howard Hinnant for his amazing help, specially explaining allocator swapping, move semantics and for developing upgradable mutex and lock transfer features.

Thanks to Pavel Vozenilek for his continuous review process, suggestions, code and help. He is the major supporter of Interprocess library. The library has grown with his many and great advices.

And finally, thank you to all Boosters. Long live to C++!

47. The __spirit__ repository is the result of the contributions of active members of the Spirit community. We would like to express our thanks to all who directly contributed and to everybody directly or indirectly involved in the discussions, which led to the creation of the parser and generator components.

The following people have directly contributed code to this repository:

[*Aaron Graham] wrote the `__qi_advance__` parser component, which allows the parser to skip (advance) through a specified number of iterations without performing unnecessary work.

[*Chris Hoeppler] submitted the `__qi_confix__` parser directive allowing to embed a parser (the subject) inside an opening (the prefix) and a closing sequence (the suffix).

[*Francois Barel] contributed the `__qi_subrule__` parser and `__karma_subrule__` generator components, allowing to create a named parser or generator, and to refer to it by name. These components are in fact fully static versions of the corresponding ``rule`` component.

[*Thomas Bernard] contributed the `__qi_keywords__` and `__qi_keywords_list__` parser components, allowing to define keyword parsers.

48. This library was developed in the context of the Google SoC 2006. I first want to thank my mentor, Joaquin, for his friendship during this project. Not only did he help me go through the process of creating this library, but he also did his best so we could have a great time doing it. Also, `Boost.Bimap` would not exist had `Boost.MultiIndex`, Joaquin's masterpiece, not existed. Thanks a lot!

`__GOOGLE_SOC_2006__`

I want to thank Google for this amazing `['boost]` to the open-source community and to Boost mentors for trusting in my proposal in the first place. Next on the list are my colleagues from SoC that helped me not get bored during the long hours of coding.

Special acknowledgements to the developers of the Boost libraries that `Boost.Bimap` has abused. See the dependencies section for a complete list.

I want to thank the open-source developers who wrote the tools I used during this project. The list of names is infinitely long, so I give a general huge thanks here.

Thanks to Paul Giaccone for proof-reading this documentation. (He has not finished yet -- the remaining typos and spelling errors are mine and will be corrected as soon as possible.)

Finally, thanks to my family, who had to see me at home all day during the SoC. Special thanks to my brother Agustin, future famous novelist (at the present time he is 19 years old), who patiently read every word of these docs and while correcting them, barked at me for my bad written English. I have learned a lot from his sermons. I want to thank my dog, Mafalda, too for barking all day from my window and for being such a good company.

Thanks to Alisdair Meredith, Fernando Cacciola, Jeff Garland, John Maddock, Thorsten Ottosen, Tony and Giovanni Piero Deretta for participating in the formal review and give me useful advices to improve this library. And thanks a lot to Ion Gaztañaga for managing the review.

49. Earlier efforts that have influenced the library design:

* The `[@http://staff.cs.utu.fi/BL/ Binder Library]` by Jaakko J\u00E4rvi;

* The `[@boost:/libs/lambda/index.html Lambda Library]` (now part of Boost) by Jaakko J\u00E4rvi and Gary Powell (the successor to the Binder Library);

* `[@http://more.sourceforge.net/ Extensions to the STL]` by Petter Urkedal.

Doug Gregor suggested that a visitor mechanism would allow ``bind`` to interoperate with a `signal/slot` library.

John Maddock fixed a MSVC-specific conflict between ``bind`` and the

[@boost:/libs/type_traits/index.html type traits library].

Numerous improvements were suggested during the formal review period by Ross Smith, Richard Crossley, Jens Maurer, Ed Brey, and others. Review manager was Darin Adler.

The precise semantics of ``bind`` were refined in discussions with Jaakko J\u00E4rvi.

Dave Abrahams fixed a MSVC-specific conflict between ``bind`` and the [boost:/libs/utility/iterator_adaptors.htm iterator adaptors library].

Dave Abrahams modified ``bind`` and ``mem_fn`` to support ``void`` returns on deficient compilers.

Mac Murrett contributed the "pascal" support enabled by ``BOOST_BIND_ENABLE_PASCAL``.

The alternative ``bind(type<R>(), f, ...)`` syntax was inspired by a discussion with Dave Abrahams and Joel de Guzman.

This documentation was ported to Quickbook by Agustín Bergé.

50. * Rene Jager's initial suggestion of using traits classes to make ``mem_fn`` adapt to user-defined smart pointers inspired the ``get_pointer``-based design.

* Numerous improvements were suggested during the formal review period by Richard Crossley, Jens Maurer, Ed Brey, and others. Review manager was Darin Adler.

* Steve Anichini pointed out that COM interfaces use ``__stdcall``.

* Dave Abrahams modified ``bind`` and ``mem_fn`` to support ``void`` returns on deficient compilers.

* Daniel Boelzle pointed out that UDK uses ``__cdecl``.

This documentation was ported to Quickbook by Agustín Bergé.

51. Special thanks to David Abrahams, Douglas Gregor, Hartmut Kaiser, Aleksey Gurtovoy, Peder Holt, Daniel Wallin, Jaakko Jarvi, Jeremiah Willcock, Dan Marsden, Eric Niebler, Joao Abecasis and Andy Little. These people are instrumental in the design and development of Fusion.

Special thanks to Ronald Garcia, the review manager and to all the people in the boost community who participated in the review: Andreas Pokorny, Andreas Huber, Jeff Flinn, David Abrahams, Pedro Lamarao, Larry Evans, Ryan Gallagher, Andy Little, Gennadiy Rozental, Tobias Schwinger, Joao Abecasis, Eric Niebler, Oleg Abrosimov, Gary Powell, Eric Friedman, Darren Cook, Martin Bonner and Douglas Gregor.

52. I'd like to thank Adreas Fett, Artyom Beilis, Daniel Larimer, David Deakins, Evgeny Shapovalov, Fernando Pelliccioni, Giovanni Piero Deretta, Gordon Woodhull, Helge Bahmann, Holger Grund, Jeffrey Lee Hellrung (Jr.), Keith Jeffery, Martin Husemann, Phil Endecott, Robert Stewart, Sergey Cheban, Steven Watanabe, Vicente J. Botet Escriba, Wayne Piekarski.

53. I'd like to thank Alex Hagen-Zanker, Christopher Kormanyos, Conrad Poelman, Eugene Yakubovich, Giovanni Piero Deretta, Hartmut Kaiser, Jeffrey Lee Hellrung, [*Nat Goodspeed], Robert Stewart, Vicente J. Botet Escriba and Yuriy Krasnoschek.

Especially Eugene Yakubovich, Giovanni Piero Deretta and Vicente J. Botet Escriba contributed many good ideas during the review.

54. I'd like to thank Agustín Bergé, Eugene Yakubovich, Giovanni Piero Deretta and especially Nat Goodspeed.

55. * Steven Watanabe for managing the Boost review process.

* All people who participated in the odeint review process on the Boost mailing list.

- * Paul Bristow for helping with the documentation.
- * The Google Summer Of Code (GSOC) program for funding and Andrew Sutton for supervising us during the GSOC and for lots of useful discussions and feedback about many implementation details..
- * Joachim Faulhaber for motivating us to participate in the Boost review process and many detailed comments about the library.
- * All users of odeint. They are the main motivation for our efforts.

[h3 Contributors]

- * Andreas Angelopoulos implemented the sparse matrix implicit Euler stepper using the MTL4 library.
- * Rajeev Singh implemented the stiff Van der Pol oscillator example.
- * Sylwester Arabas improved the documentation.
- * Denis Demidov provided the adaption to the VexCL and Viennacl libraries.
- * Christoph Koke provided improved binders.
- * Lee Hodgkinson provided the black hole example.

56. The author can be contacted at john - at - johnmaddock.co.uk; the home page for this library is at [<http://www.boost.org> www.boost.org].

I am indebted to [<http://www.cs.princeton.edu/~rs/> Robert Sedgewick's "Algorithms in C++"] for forcing me to think about algorithms and their performance, and to the folks at boost for forcing me to think, period.

[<http://www.boost-consulting.com/> Eric Niebler], author of Boost.Expressive and the [<http://research.microsoft.com/projects/greta> GRETA regular expression component], has shared several important ideas, in a series of long discussions.

Pete Becker, of [<http://www.versatilecoding.com> Roundhouse Consulting, Ltd.], has helped enormously with the standardisation proposal language.

The following people have all contributed useful comments or fixes: Dave Abrahams, Mike Allison, Edan Ayal, Jayashree Balasubramanian, Jan B''ö''lsche, Beman Dawes, Paul Baxter, David Bergman, David Dennerline, Edward Diener, Peter Dimov, Robert Dunn, Fabio Forno, Tobias Gabrielsson, Rob Gillen, Marc Gregoire, Chris Hecker, Nick Hodapp, Jesse Jones, Martin Jost, Boris Krasnovskiy, Jan Hermelink, Max Leung, Wei-hao Lin, Jens Maurer, Richard Peters, Heiko Schmidt, Jason Shirk, Gerald Slacik, Scobie Smith, Mike Smyth, Alexander Sokolovsky, Herv''é'' Poirier, Michael Raykh, Marc Recht, Scott VanCamp, Bruno Voigt, Alexey Voinov, Jerry Waldorf, Rob Ward, Lealon Watts, John Wismar, Thomas Witt and Yuval Yosef.

If I've missed your name off (I'm sure there are a few, just not who they are...) then please do get in touch.

I am also grateful to the manuals supplied with the Henry Spencer, PCRE, Perl and GNU regular expression libraries - wherever possible I have tried to maintain compatibility with these libraries and with the POSIX standard - the code however is entirely my own, including any bugs! I can absolutely guarantee that I will not fix any bugs I don't know about, so if you have any comments or spot any bugs, please get in touch.

57. Beman Dawes provided the original `config.hpp` and part of this document.

Vesa Karvonen provided a description of the principles (see [[link boost_config.rationale](#)]) and put together an early version of the current configuration setup.

John Maddock put together the configuration current code, the test programs, the configuration script and the reference section of this document.

Matias Capeletto converted the docs to quickbook format.

Numerous boost members, past and present, have contributed fixes to boost's configuration.

58. The first Boost.Process draft was created in 2006. A lot of people have worked on various drafts since then. Especially Merino Vidal, Ilya Sokolov and Felipe Tanus spent a lot of time working on early drafts. They influenced Boost.Process over the years and wrote code which, to various extents, is still around in the library today.

The design of earlier versions of Boost.Process was not always satisfying. In 2011 Jeff Flinn proposed the executor and initializer concepts Boost.Process is based on today. Without Jeff's idea the overall design of Boost.Process would not look like it does today.

A special thank you goes to [<http://www.intra2net.com/> Intra2net AG] (especially Thomas Jarosch) who sponsored a project to support the development of Boost.Process. It was this sponsorship which made it possible to create a new Boost.Process version in 2012.

Great thanks also goes to Boris Schaeling, who despite having boost.process rejected, went on to work on it and maintained it up until this day and participated in the development of the current version.

59. I'd like to thank Alex Hagen-Zanker, Christopher Kormanyos, Conrad Poelman, Eugene Yakubovich, Giovanni Piero Deretta, Hartmut Kaiser, Jeffrey Lee Hellrung, [*Nat Goodspeed], Robert Stewart, Vicente J. Botet Escriba and Yuriy Krasnoschek.

Especially Eugene Yakubovich, Giovanni Piero Deretta and Vicente J. Botet Escriba contributed many good ideas during the review.

60. This section aims to recognize the contributions of /all/ the different people that participated directly or indirectly to the design and development of this library.

Many thanks to Steven Watanabe and Vicente Botet for suggesting to me to use `__Boost_ScopeExit__` binding to [<http://lists.boost.org/Archives/boost/2010/04/165149.php> emulate local functions]. Many thanks to Alexander Nasonov for clarifying how `__Boost_ScopeExit__` binding could be used to implement local functions and for some [<http://thread.gmane.org/gmane.comp.lib.boost.devel/168612> early work] in this direction.

Many thanks to Gregory Crosswhite for using an early version of this library in [<https://github.com/gcross/CodeSearch> one of his projects].

Thanks to David Abrahams, Vicente Botet, et al. for suggesting to provide the [<http://lists.boost.org/Archives/boost/2011/02/176712.php> variadic macro syntax] on compilers that support variadic macros.

Thanks to Pierre Morcello for sharing some code that experimented with implementing local functions using `__Boost_ScopeExit__` binding (even if this library is not based on such a code).

Thanks to John Bytheway for checking the authors' virtual functor technique that originally allowed this library to pass local functions as template parameters.

Thanks to Jeffrey Lee Hellrung for suggesting the use of the "keyword" `bind`` to bind variables in scope and for suggesting to use [`^bind(/type/)`] to optionally specify the bound variable type.

Thanks to Vicente Botet for suggesting to provide a macro to expose the bound variable type to the public API.

Thanks to Steven Watanabe, Vicente Botet, Michael Caisse, Yechezkel Mett, Joel de Guzman, Thomas Heller, et al. for helping with the `__Alternatives__` section and with the profiling of the different alternatives.

Many thanks to Jeffrey Lee Hellrung for managing the [<http://lists.boost.org/boost-announce/2011/12/0340.php> Boost review] of this library.

Thanks also to all the people that submitted a Boost review: Andrzej Krzemienski, Edward Diener, Gregory Crosswhite, John Bytheway, Hartmut Kaiser, Krzysztof Czainski, Nat Lindon, Pierre Morcello, Thomas Heller, and Vicente J. Botet.

Thanks to everyone that commented on the library during its Boost review.

Finally, many thanks to the entire `__Boost__` community and [<http://lists.boost.org> mailing list] for providing valuable comments about this library and great insights on the C++ programming language.

61. I am indebted to [http://boost.org/people/joel_de_guzman.htm Joel de Guzman] and [http://boost.org/people/hartmut_kaiser.htm Hartmut Kaiser] for their expert advice during the early states of `xpressive`'s development. Much of static `xpressive`'s syntax is owes a large debt to `_spirit_`, including the syntax for `xpressive`'s semantic actions. I am thankful for [http://boost.org/people/john_maddock.htm John Maddock]'s excellent work on his proposal to add regular expressions to the standard library, and for various ideas borrowed liberally from his `regex` implementation. I'd also like to thank [<http://moderncppdesign.com/> Andrei Alexandrescu] for his input regarding the behavior of nested `regex` objects, and [http://boost.org/people/dave_abrahams.htm Dave Abrahams] for his suggestions regarding the `regex` domain-specific embedded language. Noel Belcourt helped porting `xpressive` to the Metrowerks CodeWarrior compiler. Markus Sch'`ö`'pflin helped to track down a bug on HP Tru64, and Steven Watanabe suggested the fix.

Special thanks are due to David Jenkins who contributed both ideas, code and documentation for `xpressive`'s semantic actions, symbol tables and attributes. `Xpressive`'s ternary search trie implementation is David's, as is the number parser example in [`^libs/xpressive/example/numbers.cpp`] and the documentation for symbol tables and attributes.

Thanks to John Fletcher for helping track down a runtime assertion when using `xpressive` with Howard Hinnant's most excellent `libc++`.

Finally, I would like to thank [http://boost.org/people/thomas_witt.html Thomas Witt] for acting as `xpressive`'s review manager.

62. The original implementation of `__boost_thread__` was written by William Kempf, with contributions from numerous others. This new version initially grew out of an attempt to rewrite `__boost_thread__` to William Kempf's design with fresh code that could be released under the Boost Software License. However, as the C++ Standards committee have been actively discussing standardizing a thread library for C++, this library has evolved to reflect the proposals, whilst retaining as much backwards-compatibility as possible.

Particular thanks must be given to Roland Schwarz, who contributed a lot of time and code to the original `__boost_thread__` library, and who has been actively involved with the rewrite. The scheme for dividing the platform-specific implementations into separate directories was devised by Roland, and his input has contributed greatly to improving the quality of the current implementation.

Thanks also must go to Peter Dimov, Howard Hinnant, Alexander Terekhov, Chris Thomasson and others for their comments on the implementation details of the code.

63. I'd like to thank Joel de Guzman and Hartmut Kaiser for being willing to take a chance on using Proto for their work on Spirit-2 and Karma when Proto was little more than a vision. Their requirements and feedback have been indispensable.

Thanks also to Thomas Heller and again to Hartmut for their feedback and suggestions during the redesign of Phoenix. That effort yielded several valuable advanced features such as sub-domains, external transforms, and per-domain `'as_child'` customization.

Thanks to Daniel James for providing a patch to remove the dependence on deprecated configuration macros for C++0x features.

Thanks to Joel Falcou and Christophe Henry for their enthusiasm, support, feedback, and humor; and for volunteering to be Proto's co-maintainers.

Thanks to Dave Abrahams for an especially detailed review, and for making a VM with `msvc-7.1` available so I could track down portability issues on that compiler.

Many thanks to Daniel Wallin who first implemented the code used to find the common domain among a set, accounting for super- and sub-domains. Thanks also to Jeremiah

Willcock, John Bytheway and Krishna Achuthan who offered alternate solutions to this tricky programming problem.

Thanks also to the developers of `_PETE_`. I found many good ideas there.

64. Many people have contributed to the development of this library. In particular Hugo Duncan and Joel de Guzman for help with porting to various compilers. For initial development of concepts and design Corwin Joy and Michael Kenniston deserve special thanks. Also extra thanks to Michael for writing up the theory and tradeoffs part of the documentation. Dave Zumbro for initial inspiration and sage thoughts. Many thanks to boost reviewers and users including: William Seymour, Kjell Elster, Beman Dawes, Gary Powell, Andrew Maclean, William Kempf, Peter Dimov, Chris Little, David Moore, Darin Adler, Gennadiy Rozental, Joachim Achtzehnter, Paul Bristow, Jan Langer, Mark Rodgers, Glen Knowles, Matthew Denman, and George Heintzelman.

65. This library would never have been created without inspiration, collaboration and constructive criticism from multiple sources.

David LeBlanc : This library is inspired by <http://safeint.codeplex.com> David LeBlanc's SafeInt Library. I found this library very well done in every way and useful in my embedded systems work. This motivated me to take it to the "next level".

Andrzej Commented and reviewed the library as it was originally posted on the <http://www.blincubator.com>. The consequent back and forth motivated me to invest more effort in developing documentation and examples to justify the utility, indeed the necessity, for this library. He also noted many errors in code, documentation, and tests. Without his interest and effort, I do not believe the library would have progressed beyond its initial stages.

As always, the Boost Developer's mailing list has been the source of many useful observations from potential users and constructive criticism from very knowledgeable developers. During the Boost formal review, reviews and comments were posted by the following persons:

Paul A. Bristow
Steven Watanabe
John Maddock
Antony Polukhin
Barrett Adair
Vicente J. Botet Escriba
John McFarlane
Peter Dimov

66. I'm very grateful to all the people who helped with the development, by discussion, fixes, and as users. It was pleasant to see all that involvement, which made the library much better than it would be otherwise.

In the early stages, the library was affected by discussions with Gennadiy Rozental, William Kempf and Alexander Okhotin. Hartmut Kaiser was the first person to try the library on his project and send a number of suggestions and fixes.

The formal review lead to numerous comments and enhancements. Pavol Droba helped with the option description semantic. Gennadiy Rozental has criticised many aspects of the library which caused various simplifications. Pavel Vozenilek did careful review of the implementation. A number of comments were made by:

David Abrahams
Neal D. Becker
Misha Bergal
James Curran
Carl Daniel
Beman Dawes
Tanton Gibbs
Holger Grund
Hartmut Kaiser
Petr Kocmid
Baptiste Lepilleur

Marcelo E. Magallon
Chuck Messenger
John Torjo
Matthias Troyer
Doug Gregor and Reece Dunn helped to resolve the issues with Boostbook version of the documentation.

Even after review, a number of people have helped with further development:

Rob Lievaart
Thorsten Ottosen
Joseph Wu
Ferdinand Prantl
Miro Jurisic
John Maddock
Janusz Piwowarski
Charles Brockman
Jonathan Wakely

67. Hartmut Kaiser implemented the original lazy casts and constructors based on his original work on Spirit SE "semantic expressions" (the precursor to Phoenix), and guided Phoenix from the initial review of V2 to the release of V3.

Eric Niebler did a 2.0 pre-release review and wrote some range related code that Phoenix stole and used in the algorithms. Additionally he played the leading role in inventing the extension mechanism as well as providing early prototypes and helping with Boost.Proto code. DA Proto MAN!

Angus Leeming implemented the container functions on Phoenix-1 which I then ported to Phoenix-2.

Daniel Wallin helped with the scope module, local variables, let and lambda and the algorithms. I frequently discuss design issues with Daniel on Yahoo Messenger.

Jaakko Jarvi. DA Lambda MAN!

Dave Abrahams, for his constant presence, wherever, whenever.

Aleksey Gurtovoy, DA MPL MAN!

Doug Gregor, always a source of inspiration.

Dan Marsden, did almost all the work in bringing Phoenix-2 out the door.

Thorsten Ottosen; Eric's range_ex code began life as "container_algo" in the old boost sandbox, by Thorsten in 2002-2003.

Jeremy Siek, even prior to Thorsten, in 2001, started the "container_algo".

Vladimir Prus wrote the mutating algorithms code from the Boost Wiki.

Daryle Walker did a 2.0 pre-release review.

68. Very special thanks go to:

Aleksey Gurtovoy, the developer of the ingenious meta programming library (boost::mpl). The interface as well as the implementation of Boost.Statechart hugely benefit from Alekseys work. I would have given up long ago without mpl. Moreover, Aleksey's double dispatch implementation in his FSM framework gave me fresh ideas after I had come to the conclusion that my dynamic_cast-based solution was too bad
Special thanks go to:

Mitsuo Fukasawa, who is the first person using Boost.Statechart in a real-world project. He gave invaluable feedback, convinced me to make history a top priority, translated the tutorial to Japanese and tested new releases on Linux
Peter Petrov, who contributed various standard conformance fixes, commented on early redesigns of the asynchronous_state_machine and fifo_scheduler class templates and reviewed the documentation

Peter Dimov and Douglas Gregor for developing other libraries (bind, intrusive_ptr, atomic_count, function) Boost.Statechart is building on
Pavel Vozenilek for making many suggestions on how to improve code & documentation, providing Intel 7.0 workarounds and managing the review
the countless folks who worked and are still working on the boost infrastructure (config, regression tests, build, html templates, etc). Writing Boost.Statechart would have been much less fun without this foundation
David Abrahams and Darryl Green for being persistent enough to convince me that the exit action to state destructor mapping is sometimes not a good idea
Paul A Bristow, Keith Burton, Jeff Garland, Simon Gittins, Dave Gomboc, Darryl Green, Jody Hagins, Iain K. Hanson, David B. Held, Mick Hollins, Alexander Nasonov, Peter Petrov, Augustus Saunders, John Spalding, Rob Steward, Jonathan Turkanis and Matthew Vogt for participating in the review
Joaquín M López Muñoz for his broken allocator workaround in boost/detail/allocator_utilities.hpp
Igor R for uncovering and reporting several bugs
Thanks for feedback and/or encouragement go to:

Bardur Arantsson, Arne Babnik, Robert Bell, Bohdan, Wayne Chao, Tophier Cooper, Philippe David, Peter Dimov, Reece Dunn, Grant Erickson, John Fuller, Jeff Garland, Eugene Gladyshev, David A. Greene, Douglas Gregor, Gustavo Guerra, Aleksey Gurtovoy, Federico J. Fernández, Iain K. Hanson, Steve Hawkes, David B. Held, Jürgen Hunold, Sean Kelly, Oliver Kowalke, Thomas Mathys, Simon Meiklejohn, Jiang Miao, Johan Nilsson, Matthieu Painsavoine, Chris Paulse, Yuval Ronen, Chris Russell, Bryan Silverthorn, Rob Steward, Kwee Heong Tan, Marcin Tustin, Vincent N. Virgilio, Gang Wang, Steven Watanabe, Richard Webb and Scott Woods.

69. Vladimir Prus managed the library review in Boost and actually reviewed it in the process.

Adam Wulkiewicz created the logo used on the GitHub project page. The logo was taken from his collection of Boost logos.

Luca Rigini wrote the initial implementation of the NT event log sink and made a lot of suggestions on how to improve the library with regard to writing user-defined sinks.

Jean-Daniel Michaud, Michael Lacher and all others who took part in the discussion of the requirements to the library on Wiki.

John Torjo, Gennadiy Rozental and others for their discussion on John's logging library on the Boost developers list. It helped a lot to learn the requirements and possible solutions for the library.

All authors of the great Boost libraries that were involved in this library (notably, Boost.SmartPtr, Boost.Thread, Boost.DateTime, Boost.Filesystem, Boost.Intrusive, Boost.Spirit2 and others) and Boost.Quickbook authors for a simple yet powerful documenting tool.

All the reviewers and the users who made suggestions and offered their feedback on the library. Most notably, Steven Watanabe for his in-depth studying the docs and the code, with a lot of fruitful comments on both.

70. Numerous users submitted bug reports and patches to correct and optimize Boost.Iostreams for release 1.35. Frank Birbacher and Chad Walters deserve special thanks for diagnosing and fixing bugs and for prodding the author to resume active maintenance of the library.

The original idea for the library came from the example stream buffer implementations in Standard C++ IOStreams and Locales, by Angelika Langer and Klaus Kreft ([Langer]). Robert Ramey suggested extending the library to handle filtering. In addition:

The implementation of stream_buffer is indebted to work of Angelika Langer and Klaus Kreft ([Langer], pp. 228-43).

The filtering stream buffer concept was invented by James Kanze and Dietmar Kühl. See [Kanze].

The concepts InputFilter and OutputFilter were inspired by James Kanze's extractors and inserters. In addition, the names of the components filtering_stream and filtering_streambuf are borrowed from Kanze, as are several of the Filters from the Tutorial. See [Kanze].

Pipelines were introduced by Jan Christiaan van Winkel and John van Krieken. See [van Winkel]. Dietmar Kühl suggested adding this functionality to the Iostreams library. The facility for adding iterator ranges and output iterators to filter chains was inspired by work of Maxim Egorushkin. See [Egorushkin].

The devices for accessing memory-mapped file are based on work of Craig Henderson; see ([Henderson]). Jonathan Graehl added several useful features.

The devices for accessing file descriptors are based on work of Nicolai Josuttis ([Josuttis1] and [Josuttis2]).

The array devices and null devices were inspired by work of Dayle Walker.

The Filters for compression and decompression were influenced by the work of Jeff Garland ([Garland]) and Jonathan de Halleux ([de Halleux]).

The template `basic_stdio_filter` was inspired by work of Christopher Diggins. See [Diggins].

The treatment of 64-bit stream offsets was suggested by Gareth Sylvester-Bradley, who also supplied the implementation of the positioning functions used with the Dinkumware standard library.

The template `restriction` was suggested by David Abrahams. See [Abrahams2].

Maxim Egorushkin, Larry Evans, George M. Garner, Jonathan Graehl, Robert Ramey, Rob Stewart, John Torjo, Pavel Vozenilek and Carlo Woods provided extensive criticism of various versions of the library.

Angelika Langer and James Kanze provided useful insights into the proper role of exceptions in the `Iostream` library.

Robert Ramey's documentation for `Boost.Serialization` provided the inspiration for the Javascript Tree Control used in this documentation.

Jeff Garland served as review manager and provided helpful criticism and guidance.

Those who participated in the formal review or the post-review discussions, or who

submitted bug reports or patches, include (in no particular order) Adam Peterson, Joaquín M López Muñoz, Neal D. Becker, Stas Garifulin, Vladimir Prus, Rob Stewart, Robert Ramey, Michel Decima, Michiel Salters, Pedro Lamarão, Dietmar Kühl, Oleg Rekutin, Reece Dunn, Stefan Slapeta, Jeff Flinn, Jeff Garland, Eugene Lazutkin, John Torjo, Brian Braatz, Keith Burton, Keith MacDonald, Phil Richards, Arjen Wagenaar, Caleb Epstein, Dylan Trotter, Ben Hutchings, Daniel James, Daniel Schlyder, Jan Christiaan van Winkel, Jonathan Graehl, Jonathan Wakely, Rene Rivera, Tony Juricic, Bronek Kozicki, George M. Garner, Jr., Thorsten Ottosen, Bertolt Mildner, Carlo Wood, Christopher Diggins, Christoph Ludwig, Daryle Walker, Dirk Griffioen, Gareth Sylvester-Bradley, Jürgen Hunold, Larry Evans, Markus Schöpflin, Martin Ecker, Martin Wille, Russel Hind, Matthew Vogt, Matthias Troyer, Peter Dimov, Bruno Martínez Aguerre, Douglas Gregor, Paul A. Bristow, David B. Held, Kevin Wheatley, Pavel Vozenilek, Emmanuel Thomé, Scott Woods, Israel Fernández Cabrera, Felix Gartsman, Pavel Chikulaev, Lisa Glendenning, Yuval Ronen and Paul Harris.

71. Hartmut Kaiser implemented the original lazy casts and constructors based on his original work on Spirit SE "semantic expressions" (the precursor to Phoenix), and guided Phoenix from the initial review of V2 to the release of V3.

Eric Niebler did a 2.0 pre-release review and wrote some range related code that Phoenix stole and used in the algorithms. Additionally he played the leading role in inventing the extension mechanism as well as providing early prototypes and helping with `Boost.Proto` code. DA Proto MAN!

Angus Leeming implemented the container functions on Phoenix-1 which I then ported to Phoenix-2.

Daniel Wallin helped with the scope module, local variables, `let` and `lambda` and the algorithms. I frequently discuss design issues with Daniel on Yahoo Messenger.

Jaakko Jarvi. DA Lambda MAN!

Dave Abrahams, for his constant presence, wherever, whenever.

Aleksey Gurtovoy, DA MPL MAN!

Doug Gregor, always a source of inspiration.

Dan Marsden, did almost all the work in bringing Phoenix-2 out the door.

Thorsten Ottosen; Eric's `range_ex` code began life as "`container_algo`" in the old boost sandbox, by Thorsten in 2002-2003.

Jeremy Siek, even prior to Thorsten, in 2001, started the "`container_algo`".

Vladimir Prus wrote the mutating algorithms code from the Boost Wiki.

Daryle Walker did a 2.0 pre-release review.

72. I am indebted to Joel de Guzman and Hartmut Kaiser for their expert advice during the early states of `xpressive`'s development. Much of static `xpressive`'s syntax is owes a large debt to Spirit, including the syntax for `xpressive`'s semantic actions. I am thankful for John Maddock's excellent work on his proposal to add regular expressions to the standard library, and for various ideas borrowed liberally from his regex implementation. I'd also like to thank Andrei Alexandrescu for his input regarding the behavior of nested regex objects, and Dave Abrahams for his suggestions regarding the regex domain-specific embedded language. Noel Belcourt helped porting `xpressive` to the

Metrowerks CodeWarrior compiler. Markus Schöpflin helped to track down a bug on HP Tru64, and Steven Watanabe suggested the fix.

Special thanks are due to David Jenkins who contributed both ideas, code and documentation for xpressive's semantic actions, symbol tables and attributes. Xpressive's ternary search trie implementation is David's, as is the number parser example in `libs/xpressive/example/numbers.cpp` and the documentation for symbol tables and attributes.

Thanks to John Fletcher for helping track down a runtime assertion when using xpressive with Howard Hinnant's most excellent `libc++`.

Finally, I would like to thank Thomas Witt for acting as xpressive's review manager.

73. Takatoshi Kondo found and corrected a very obscure and difficult bug in the serialization of virtual base classes. AutoForm Engineering GmbH supported development efforts to extend correct serialization to objects stored in DLLS. Cadence Israel supported enhancement and testing of the portable binary archive. David Abrahams improved implementation of "export" functionality. This not only eliminated an annoying header sequencing requirement, but also the need to maintain a list of "known archives". Mattias Troyer enhanced the implementation of native binary archives. This includes enhancement and generalization of the library itself including generalization of the wrapper concept. Markus Schöpflin tracked down issues with TRU64 compiler resulting in 100% passing. Troy D. Straszheim made the initial version of variant serialization. Tonko Juricic helped refine and complete project files for VC 7.1 ide Rene Rivera tracked down several issues related to Code Warrior, toolset configuration and bjam and much else. Martin Ecker detected (and fixed!) a number of subtle errors regarding cyclic pointers, shared pointers. He also built the library as a DLL and raised some issues Pavel Vozenilek invested much effort in review of code and documentation resulting in many improvements. In addition he helped a lot with porting to other platforms including VC 6.0, Intel, and especially Borland. Jens Maurer and Beman Dawes who got the boost serialization ball rolling. It was one or both of these two that invented the much beloved & syntax used to implement both save and load in one function specification. Vladimir Prus for evaluating an early draft and contributing the diamond inheritance example. William E. Kempf who made the templates for this and other boost manuals. This relieved me of much aggravation. Vahan Margaryan and Fredrik Blomqvist for their contributions to my understanding of the subtle issues of exception safety in this context. all other boost members who responded with feedback during the development of this library. Almost all comments resulted in tangible changes in the library which made it much better. boosters who helped out in porting to other platforms:, Fernando Cacciola (Borland), Jeff Flinn (VC 7.1), Vladimir Prus (gcc 3.3), Christoph Ludwig(gcc 3.4), Rob Lievaart(mingw), Marshal Clow(gcc-darwin) among others. all boost members who participated in the first formal review in November 2002. Many of these members invested quite an effort to evaluate the library and suggest changes. They are Matthias Troyer, Pavel Vozenilek, Vladimir Prus, Fredrik Blomqvist, Jeff Garland, Gennadiy Rozental, Alberto Barbati, Dave Harris. Mr. Rozental in particular wrote an incredibly insightful analysis that has driven all subsequent development that has resulted in the current package. Dave Harris proposal and spirited defense of it led to a re-thinking of the overrides for serialization of pointers. This resulted in a simpler and more effective method of accounting for non-default constructors required by serialization of pointers and STL collections. Bryce Lelbach rewrote the XML Serialization grammar using Boost.Spirit 2.x.

74. This section tries to recognize the contributions of all the different people that participated directly or indirectly to the design and development of this library.

Sincere thanks to my parents for their support with my education and my studies in computer science.

Many thanks to Andrzej Krzemienski for reviewing early versions of this library providing valuable insights and exchanging early ideas on assertion requirements.

Many thanks to Vicente J. Botet Escriba for reviewing earlier versions of this library providing valuable insights and for suggesting to use a dedicated trait to copy old values.

Thanks to Steven Watanabe for providing valuable insights on C++, SFINAE, and introspection.

Thanks to Dave Abrahams for moderating the Boost review of this library.

Thanks to Daniel James for his help with incorporating this library files into the Boost Git repository.

Thanks to David Maley for sharing source code from his inspiring work on emulating contract programming and subcontracting in C++ in [Maley99].

Many thanks to Thorsten Ottosen for his work on the [N1962] proposal (and its previous revisions) and for clarifying the proposal requirements directly with the library authors when needed.

Many thanks to Bertrand Meyer for his pioneering and thorough work on contract programming in [Meyer97].

Finally, many thanks to the entire Boost community and mailing list for providing valuable comments on this library and great insights on the C++ programming language.

75. Thank you to everyone who reviewed the design, code, examples, tests, or documentation, including:

Peter Dimov
Andrey Semashev
Bjorn Reese
Steven Watanabe
Antony Polukhin
Lars Viklund
Michael Spencer
Paul A. Bristow

Thank you to everyone who contributed a feature to the library, with code, tests, or documentation:

Joel Falcou
Charly Chevalier

Thank you to Ahmed Charles for serving as the review manager for the formal review of the library.

76. This version of Spirit is a complete rewrite of the classic Spirit many people have been contributing to (see below). But there are a couple of people who already managed to help significantly during this rewrite. We would like to express our special acknowledgement to (in no particular order):

Eric Niebler for writing Boost.Proto, without which this rewrite wouldn't have been possible, and helping with examples, advice, and suggestions on how to use Boost.Proto in the best possible way.

Ben Hanson for providing us with an early version of his Lexertl library, which is proposed to be included into Boost (as Boost.Lexer). At the time of this writing the Boost review for this library is still pending.

Francois Barel for his silent but steady work on making and keeping Spirit compatible with all versions of gcc, older and newest ones. He not only contributed subrules to Spirit V2.1, but always keeps an eye on the small details which are so important to make a difference.

Andreas Haberstroh for proof reading the documentation and fixing those non-native-speaker-quirks we managed to introduce into the first versions of the documentation.

Chris Hoeppler for taking up the editorial tasks for the initial version of this documentation together with Andreas Haberstroh. Chris did a lot especially at the last minute when we are about to release.

Michael Caisse (a.k.a. mjcaisse) for being Spirit's benevolent evangelist on freenode's #boost IRC . No Spirit question asked there stays without an answer because of his active involvement. Also, we would like to thank him for last minute editing work on the 2.1 release documentation.

Tobias Schwinger for proposing expectation points and GCC port of an early version.

Dave Abrahams as always, for countless advice and help on C++, library development, interfaces, usability and ease of use, for reviewing the code and providing valuable feedback and for always keeping us on our toes.

OvermindDL for his creative ideas on the mailing list helping to resolve even more difficult user problems.

Carl Barron for his early adoption and valuable feedback on the Lexer library forcing us to design a proper API covering all of his use cases. He also contributed an early version of the variadic attribute API for Qi.

Daniel James for improving and maintaining Quickbook, the tool we use for this documentation. Also, for bits and pieces here and there such documentation suggestions and editorial patches.

Stephan Menzel for his early adoption of Qi and Karma and his willingness to invest time to spot bugs which were hard to isolate. Also, for his feedback on the documentation.

Ray Burkholder and Dainis Polis for last minute feedback on the documentation.

Steve Brandt for his his effort trying to put Qi and Karma to some use while writing a source to source language transformation tool. He made many incredible suggestions helping to improve the usability of both libraries.

Bryce Leylbach (a.k.a. wash) for contributing the components `qi::as<T>[]` and `karma::as<T>[]`, for working on utree and its integration with Qi and Karma, for adding numeric parser literals, for contributing the related documentation, and for being a big help in the everyday maintenance of the library's (and our) sanity.

Mathias Gaunard for his bug reports, suggestions and regression test contributions to the Lexer helping to find subtle bugs and to improve its overall usability.

Thomas Bernard (a.k.a. teajay) for working on the keyword parser and for adding explicit names to the `qi::symbols<>` component.

Robert Stewart for his active participation on the mailing list, his helpful comments, examples and suggestions.

Thomas Taylor, Richard Crossley, Semen, and Adalberto Castelo for their help in isolating problems while testing the new attribute handling code released with V2.5.

Special thanks to spirit-devel and spirit-general mailing lists for participating in the discussions, being early adopters of pre-release versions of Spirit2 from the very start and helping out in various tasks such as helping with support, bug tracking, benchmarking and testing, etc. The list include: Larry Evans, Richard Webb, Martin Wille, Dan Marsden, Cedric Venet, Allan Odgaard, Matthias Vallentin, Justinas V.D., Darid Tromer, Brian O'Kennedy, Aaron Graham, Joerg Becker.

Joao Abecasis for his early support and involvement in Spirit2 development and for disturbing my peace every once in a while for a couple of jokes.

The list goes on and on... if you've been mentioned thank Joel and Hartmut, if not, kick Joao :-)

Acknowledgements from the Spirit V1 classic Documentation
Special thanks for working on Spirit classic to:

Dan Nuffer for his work on lexers, parse trees, ASTs, XML parsers, the multi-pass iterator as well as administering Spirit's site, editing, maintaining the CVS and doing the releases plus a zillion of other chores that were almost taken for granted.

Hartmut Kaiser for his work on the C parser, the work on the C/C++ preprocessor, utility parsers, the original port to Intel 5.0, various work on Phoenix, porting to v1.5, the meta-parsers, the grouping-parsers, extensive testing and painstaking attention to details.

Martin Wille who improved grammar multi thread safety, contributed the eol_p parser, the dynamic parsers, documentation and for taking an active role in almost every aspect from brainstorming and design to coding. And, as always, helps keep the regression tests for g++ on Linux as green as ever :-).

Martijn W. Van Der Lee our Web site administrator and for contributing the RFC821 parser.

Giovanni Bajo for last minute tweaks of Spirit 1.8.0 for CodeWarrior 8.3. Actually, I'm ashamed Giovanni was not in this list already. He's done a lot since Spirit 1.5, the first Boost.Spirit release. He's instrumental in the porting of the Spirit iterators stuff to the new Boost Iterators Library (version 2). He also did various bug fixes and wrote some tests here and there.

Juan Carlos Arevalo-Baeza (JCAB)* for his work on the C++ parser, the position iterator, ports to v1.5 and keeping the mailing list discussions alive and kicking.

Vaclav Vesely, lots of stuff, the no_actions directive, various patches fixes, the distinct parsers, the lazy parser, some phoenix tweaks and add-ons (e.g. new_). Also, *Stefan Slapeta] and wife for editing Vaclav's distinct parser doc.

Raghavendra Satish for doing the original v1.3 port to VC++ and his work on Phoenix.

Noah Stein for following up and helping Ragav on the VC++ ports.

Hakki Dogusan, for his original v1.0 Pascal parser.

John (EBo) David for his work on the VM and watching over my shoulder as I code giving the impression of distance eXtreme programming.

Chris Uzdavinis for feeding in comments and valuable suggestions as well as editing the documentation.

Carsten Stoll, for his work on dynamic parsers.

Andy Elvey and his conifer parser.

Bruce Florman, who did the original v1.0 port to VC++.

Jeff Westfahl for porting the loop parsers to v1.5 and contributing the file iterator.

Peter Simons for the RFC date parser example and tutorial plus helping out with some nitty gritty details.

Markus Schöpflin for suggesting the end_p parser and lots of other nifty things and his active presence in the mailing list.

Doug Gregor for mentoring and his ability to see things that others don't.

David Abrahams for giving Joel a job that allows him to still work on Spirit, plus countless advice and help on C++ and specifically template metaprogramming.

Aleksey Gurtovoy for his MPL library from which we stole many metaprogramming tricks especially for less conforming compilers such as Borland and VC6/7.

Gustavo Guerra for his last minute review of Spirit and constant feedback, plus patches here and there (e.g. proposing the new dot behavior of the real numerics parsers).

Nicola Musatti, Paul Snively, Alisdair Meredith and Hugo Duncan for testing and sending in various patches.

Steve Rowe for his splendid work on the TSTs that will soon be taken into Spirit.

Jonathan de Halleux for his work on actors.

Angus Leeming for last minute editing work on the 1.8.0 release documentation, his work on Phoenix and his active presence in the Spirit mailing list.

Joao Abecasis for his active presence in the Spirit mailing list, providing user support, participating in the discussions and so on.

Guillaume Melquiond for a last minute patch to multi_pass for 1.8.1.

Peder Holt for his porting work on Phoenix, Fusion and Spirit to VC6.

To Joel's wife Mariel who did the graphics in this document.

My, there's a lot in this list! And it's a continuing list. We add people to this list every time. We hope we did not forget anyone. If we missed someone you know who has helped in any way, please inform us.

Special thanks also to people who gave feedback and valuable comments, particularly members of Boost and Spirit mailing lists. This includes all those who participated in the review:

John Maddock, our review manager, Aleksey Gurtovoy, Andre Hentz, Beman Dawes, Carl Daniel, Christopher Currie, Dan Gohman, Dan Nuffer, Daryle Walker, David Abrahams, David B. Held, Dirk Gerrits, Douglas Gregor, Hartmut Kaiser, Iain K.Hanson, Juan Carlos Arevalo-Baeza, Larry Evans, Martin Wille, Mattias Flodin, Noah Stein, Nuno Lucas, Peter Dimov, Peter Simons, Petr Kocmid, Ross Smith, Scott Kirkwood, Steve Cleary, Thorsten Ottosen, Tom Wenisch, Vladimir Prus

Finally thanks to SourceForge for hosting the Spirit project and Boost: a C++ community comprised of extremely talented library authors who participate in the discussion and peer review of well crafted C++ libraries.

77. This section aims to recognize the contributions of all the different people that participated directly or indirectly to the design and development of this library.

Many thanks to Steven Watanabe and Vicente Botet for suggesting to me to use Boost.ScopeExit binding to emulate local functions. Many thanks to Alexander Nasonov for clarifying how Boost.ScopeExit binding could be used to implement local functions and for some early work in this direction.

Many thanks to Gregory Crosswhite for using an early version of this library in one of his projects.

Thanks to David Abrahams, Vicente Botet, et al. for suggesting to provide the variadic macro syntax on compilers that support variadic macros.

Thanks to Pierre Morcello for sharing some code that experimented with implementing local functions using Boost.ScopeExit binding (even if this library is not based on such a code).

Thanks to John Bytheway for checking the authors' virtual functor technique that originally allowed this library to pass local functions as template parameters.

Thanks to Jeffrey Lee Hellrung for suggesting the use of the "keyword" bind to bind variables in scope and for suggesting to use bind(type) to optionally specify the bound variable type. Thanks to Vicente Botet for suggesting to provide a macro to expose the bound variable type to the public API.

Thanks to Steven Watanabe, Vicente Botet, Michael Caisse, Yechezkel Mett, Joel de Guzman, Thomas Heller, et al. for helping with the Alternatives section and with the profiling of the different alternatives.

Many thanks to Jeffrey Lee Hellrung for managing the Boost review of this library. Thanks also to all the people that submitted a Boost review: Andrzej Krzemienski, Edward Diener, Gregory Crosswhite, John Bytheway, Hartmut Kaiser, Krzysztof Czainki, Nat Lindon, Pierre Morcello, Thomas Heller, and Vicente J. Botet. Thanks to everyone that commented on the library during its Boost review.

Finally, many thanks to the entire Boost community and mailing list for providing valuable comments about this library and great insights on the C++ programming language.

78. Many thanks to Mathias Gaunard for suggesting to implement `boost::overloaded_function` and for some sample code.

Thanks to John Bytheway for suggesting to implement `boost::make_overloaded_function`.

Thanks to Nathan Ridge for suggestions on how to implement `boost::make_overloaded_function`.

Thanks to Robert Stewart for commenting on the library name.

Many thanks to the entire Boost community and mailing list for providing valuable comments about this library and great insights on the C++ programming language.

79. The Spirit repository is the result of the contributions of active members of the Spirit community. We would like to express our thanks to all who directly contributed and to everybody directly or indirectly involved in the discussions, which led to the creation of the parser and generator components.

The following people have directly contributed code to this repository:

Aaron Graham wrote the advance parser component, which allows the parser to skip (advance) through a specified number of iterations without performing unnecessary work.

Chris Hoeppler submitted the confix parser directive allowing to embed a parser (the subject) inside an opening (the prefix) and a closing sequence (the suffix).

Francois Barel contributed the subrule parser and subrule generator components, allowing to create a named parser or generator, and to refer to it by name. These components are in fact fully static versions of the corresponding rule component.

Thomas Bernard contributed the `keyword_list` and `kwd() []` parser components, allowing to define keyword parsers.

80. Dan Nuffer for his work on lexers, parse trees, ASTs, XML parsers, the multi-pass iterator as well as administering Spirit's site, editing, maintaining the CVS and doing the releases plus a zillion of other chores that were almost taken for granted.

Hartmut Kaiser for his work on the C parser, the work on the C/C++ preprocessor, utility parsers, the original port to Intel 5.0, various work on Phoenix, porting to v1.5, the meta-parsers, the grouping-parsers, extensive testing and painstaking attention to details.

Martin Wille who improved grammar multi thread safety, contributed the `eol_p` parser, the dynamic parsers, documentation and for taking an active role in almost every aspect from brainstorming and design to coding. And, as always, helps keep the regression tests for g++ on Linux as green as ever :-).

Martijn W. Van Der Lee our Web site administrator and for contributing the RFC821 parser.

Giovanni Bajo for last minute tweaks of Spirit 1.8.0 for CodeWarrior 8.3. Actually, I'm ashamed Giovanni was not in this list already. He's done a lot since Spirit 1.5, the first Boost.Spirit release. He's instrumental in the porting of the Spirit iterators stuff to the new Boost Iterators Library (version 2). He also did various bug fixes and wrote some tests here and there.

Juan Carlos Arevalo-Baeza (JCAB) for his work on the C++ parser, the position iterator, ports to v1.5 and keeping the mailing list discussions alive and kicking.

Vaclav Vesely, lots of stuff, the `no_actions` directive, various patches fixes, the distinct parsers, the lazy parser, some phoenix tweaks and add-ons (e.g. `new_`). Also, Stefan Slapeta and wife for editing Vaclav's distinct parser doc.

Raghavendra Satish for doing the original v1.3 port to VC++ and his work on Phoenix.

Noah Stein for following up and helping Ragav on the VC++ ports.

Hakki Dogusan, for his original v1.0 Pascal parser.

John (EBo) David for his work on the VM and watching over my shoulder as I code giving the impression of distance eXtreme programming.

Chris Uzdavinis for feeding in comments and valuable suggestions as well as editing the documentation.

Carsten Stoll, for his work on dynamic parsers.

Andy Elvey and his conifer parser.

Bruce Florman, who did the original v1.0 port to VC++.

Jeff Westfahl for porting the loop parsers to v1.5 and contributing the file iterator.

Peter Simons for the RFC date parser example and tutorial plus helping out with some nitty gritty details.

Markus Schöpflin for suggesting the `end_p` parser and lots of other nifty things and his active presence in the mailing list.

Doug Gregor for mentoring and his ability to see things that others don't.

David Abrahams for giving me a job that allows me to still work on Spirit, plus countless advice and help on C++ and specifically template metaprogramming.

Aleksey Gurtovoy for his MPL library from which I stole many metaprogramming tricks especially for less conforming compilers such as Borland and VC6/7.

Gustavo Guerra for his last minute review of Spirit and constant feedback, plus patches here and there (e.g. proposing the new dot behavior of the real numerics parsers).

Nicola Musatti, Paul Snively, Alisdair Meredith and Hugo Duncan for testing and sending in various patches.

Steve Rowe for his splendid work on the TSTs that will soon be taken into Spirit.

Jonathan de Halleux for his work on actors.

Angus Leeming for last minute editing work on the 1.8.0 release documentation, his work on Phoenix and his active presence in the Spirit mailing list.

Joao Abecasis for his active presence in the Spirit mailing list, providing user support, participating in the discussions and so on.

Guillaume Melquiond for a last minute patch to `multi_pass` for 1.8.1.

Peder Holt for his porting work on Phoenix, Fusion and Spirit to VC6.

To my wife Mariel who did the graphics in this document.

My, there's a lot in this list! And it's a continuing list. I add people to this list everytime. I hope I did not forget anyone. If I missed someone you know who has helped in any way, please inform me.

Special thanks also to people who gave feedback and valuable comments, particularly members of Boost and Spirit mailing lists. This includes all those who participated in the review:

John Maddock, our review manager
Aleksey Gurtovoy
Andre Hentz
Beman Dawes
Carl Daniel
Christopher Currie
Dan Gohman
Dan Nuffer
Daryle Walker
David Abrahams
David B. Held
Dirk Gerrits
Douglas Gregor
Hartmut Kaiser
Iain K.Hanson
Juan Carlos Arevalo-Baeza
Larry Evans
Martin Wille
Mattias Flodin
Noah Stein
Nuno Lucas
Peter Dimov
Peter Simons
Petr Kocmid
Ross Smith
Scott Kirkwood
Steve Cleary
Thorsten Ottosen
Tom Wenisch
Vladimir Prus

Finally thanks to SourceForge for hosting the Spirit project and Boost: a C++ community comprised of extremely talented library authors who participate in the discussion and peer review of well crafted C++ libraries.

81. The library uses Peter Dimov's implementation of `std::make_index_sequence`. Manu Sánchez aided immensely with CI setup and performance testing. Sehe contributed performance results for GCC 5.2, and Francisco José Tapia for Clang 3.9.

The Boost acceptance review took place between the 3rd and 17th of May, 2017. Thank you to Ion Gaztañaga for smoothly managing the process. The following people participated with full reviews or valuable comments: Pete Bartlett, Hans Dembinski, Dominique Devienne, Edward Diener, Vinnie Falco, Ion Gaztañaga, Andrzej Krzemiński, Brook Milligan, Thorsten Ottosen, Steven Watanabe, Adam Wulkiewicz. Many thanks to all of them. Steven Watanabe gave crucial help in solving some hard problems related to the usage of `Boost.TypeErasure`.

`Boost.PolyCollection` was designed and written between rainy Viavélez, noisy Madrid and beautiful Cáceres, August-November, 2016. Most of the after-review work in preparation for the official Boost release was done in the quiet town of Oropesa during the spring of 2017.

In memory of Joaquín López Borrella (1939-2015), in memory of Héctor (2004-2017): may your ghosts keep us company.

82. I would like to thank CEO Hermann Steppe and Chief Developer Peter Wuttke of Cortex Software GmbH for their friendly support of my work on the Icl and their permission to release the library as open source. For her genuine interest in my work and many creative and uplifting talks I want to thank my colleague Axinja Ott who contributed a lot to the success of the project.

Many thanks to Paul A. Bristow, Vicente Botet, Luke Simonson, Alp Mestan, David Abrahams, Steven Watanabe, Neal Becker, Phil Endecott, Robert Stewart, Jeff Flinn, Zachary Turner and other developers from the Boost community who supported the

development of the Interval Template Library by numerous hints and feedbacks on the boost mailing list. Also helpful have been conversations, hints and contributions at the BoostCon 2009 by Jeff Garland, David Jenkins, Tobias Loew, Barend Gehrels, Luke Simonson and Hartmut Kaiser. Special thanks for reading and improving this documentation to Neal Becker, Ilya Bobir and Brian Wood. Jeff Flinn provided valuable feedback and a codepatch to fix portability problems with CodeWarrior 9.4. Many thanks for that.

I am grateful to Hartmut Kaiser for managing the formal review of this library and to all the reviewers and participants in the related discussions, including Jeff Flinn, Luke Simonson, Phil Endecott, Eric M. Jonas, Peter Wuttke, Robert Stewart, Barend Gehrels, Vicente Botet, Thomas Klimpel, Paul A. Bristow, Jerry Jeremiah, John Reid, Steven Watanabe, Brian Wood, Markus Werle and Michael Caisse.

For sending in bug reports, code patches and suggestions for improvements after the review thanks to Denis and Marvin Sielenkemper.

83. We like to thank all the people who helped to develop this library.

First of all we are grateful to Hartmut Kaiser for managing the formal review of this library. Hartmut is an excellent review manager, who intervened when necessary and produced the review report quickly.

We thank the 14 reviewers of our library, reviewed from November 5, 2009 to November 22, 2009. Reviews have been written by: Brandon Kohn, Christophe Henry, Fabio Fracassi, Gordon Woodhull, Joachim Faulhaber, Jonathan Franklin, Jose, Lucanus Simonson, Michael Caisse, Michael Fawcett, Paul Bristow, Phil Endecott, Thomas Klimpel, Tom Brinkman.

We also thank all people who discussed on the mailing lists (either at boost, or at osgeo) about Boost.Geometry, in preview stage, or in review stage, or after that.

Furthermore we are thankful to people supplying patches: Arnold Metselaar, Aleksey Tulinov, Christophe Henry

Finally I (Barend) would like to thank my former employer, Geodan. They allowed me to start a geographic library in 1995, which after a number of incarnations, redesigns, refactorings, previews, a review and even more refactorings have led to the now released Boost.Geometry. And with them I want to thank the team initially involved in developing the library, Valik Solorzano Barboza, Maarten Hilferink, Anne Blankert, and later Sjoerd Schreuder, Steven Fruijtier, Paul den Dulk, and Joris Sierman.

84. This section tries to recognize the contributions of all the different people that participated directly or indirectly to the design and development of this library.

Sincere thanks to my parents for their support with my education and my studies in computer science.

Many thanks to Andrzej Krzemienski for reviewing early versions of this library providing valuable insights and exchanging early ideas on assertion requirements.

Many thanks to Vicente J. Botet Escriba for reviewing earlier versions of this library providing valuable insights and for suggesting to use a dedicated trait to copy old values.

Thanks to Steven Watanabe for providing valuable insights on C++, SFINAE, and introspection.

Thanks to Dave Abrahams for moderating the Boost review of this library.

Thanks to Daniel James for his help with incorporating this library files into the Boost Git repository.

Thanks to David Maley for sharing source code form his inspiring work on emulating contract programming and subcontracting in C++ in `__Maley99__`.

Many thanks to Thorsten Ottosen for his work on the `__N1962__` proposal (and its previous revisions) and for clarifying the proposal requirements directly with the library authors when needed.

Many thanks to Bertrand Meyer for his pioneering and thorough work on contract programming in `__Meyer97__`.

Finally, many thanks to the entire Boost community and [<http://lists.boost.org> mailing list] for providing valuable comments on this library and great insights on the C++ programming language.

85. [h4 Boost Test Team]

Boost.Test 3.0 is being developed and maintained by Gennadiy Rozental and Raffi Enficiaud.

[h4 New documentation]

Raffi Enficiaud and Andrzej Krzemienski efforts were a driving force behind the Boost.Test documentation overhaul.

[h4 Second incarnation including the Unit Test Framework]

Beman Dawes and Ullrich Koethe started the library. Fernando Cacciola, Jeremy Siek, Beman Dawes, Ullrich Koethe, Dave Abrahams suggested numerous improvements during the Formal Review. Jeremy Siek was the review manager. Beman Dawes was a great help in both final testing and merging library with rest of the boost. Gennadiy Rozental was the developer and maintainer.

[h4 Original Test Library]

Ed Brey, Kevlin Henney, Ullrich Koethe, and Thomas Matelich provided very helpful comments during development. Dave Abrahams, Ed Brey, William Kempf, Jens Maurer, and Wilka suggested numerous improvements during the Formal Review. Jens Maurer was the review manager. Beman Dawes is the developer and maintainer.

86. We like to thank all the people who helped to develop this library.

First of all we are grateful to Hartmut Kaiser for managing the formal review of this library. Hartmut is an excellent review manager, who intervented when necessary and produced the review report quickly.

We thank the 14 reviewers of our library, reviewed from November 5, 2009 to November 22, 2009. Reviews have been written by: Brandon Kohn, Christophe Henry, Fabio Fracassi, Gordon Woodhull, Joachim Faulhaber, Jonathan Franklin, Jose, Lucanus Simonson, Michael Caisse, Michael Fawcett, Paul Bristow, Phil Endecott, Thomas Klimpel, Tom Brinkman.

We also thank all people who discussed on the mailing lists (either at boost, or at osgeo) about `__boost_geometry__`, in preview stage, or in review stage, or after that.

Furthermore we are thankful to people supplying patches: Arnold Metselaar, Aleksey Tulinov, Christophe Henry

Finally I (Barend) would like to thank my former employer, Geodan. They allowed me to start a geographic library in 1995, which after a number of incarnations, redesigns, refactorings, previews, a review and even more refactorings have led to the now released `__boost_geometry__`. And with them I want to thank the team initially involved in developing the library, Valik Solorzano Barboza, Maarten Hilferink, Anne Blankert, and later Sjoerd Schreuder, Steven Fruijtier, Paul den Dulk, and Joris Sierman.

87. This version of Spirit is a complete rewrite of the `/classic/` Spirit many people have been contributing to (see below). But there are a couple of people who already managed to help significantly during this rewrite. We would like to express our special acknowledgement to (in no particular order):

[*Eric Niebler] for writing Boost.Proto, without which this rewrite wouldn't have been possible, and helping with examples, advice, and suggestions on how to use Boost.Proto in the best possible way.

[*Ben Hanson] for providing us with an early version of his `__lexertl__` library, which is proposed to be included into Boost (as Boost.Lexer). At the time of this writing the Boost review for this library is still pending.

[*Francois Barel] for his silent but steady work on making and keeping Spirit compatible with all versions of gcc, older and newest ones. He not only contributed subrules to Spirit V2.1, but always keeps an eye on the small details which are so important to make a difference.

[*Andreas Haberstroh] for proof reading the documentation and fixing those non-native-speaker-quirks we managed to introduce into the first versions of the documentation.

[*Chris Hoeppler] for taking up the editorial tasks for the initial version of this documentation together with Andreas Haberstroh. Chris did a lot especially at the last minute when we are about to release.

[*Michael Caisse] (a.k.a. mjcaisse) for being Spirit's benevolent evangelist on freenode's #boost IRC . No Spirit question asked there stays without an answer because of his active involvement. Also, we would like to thank him for last minute editing work on the 2.1 release documentation.

[*Tobias Schwinger] for proposing expectation points and GCC port of an early version.

[*Dave Abrahams] as always, for countless advice and help on C++, library development, interfaces, usability and ease of use, for reviewing the code and providing valuable feedback and for always keeping us on our toes.

[*OvermindDL] for his creative ideas on the mailing list helping to resolve even more difficult user problems.

[*Carl Barron] for his early adoption and valuable feedback on the Lexer library forcing us to design a proper API covering all of his use cases. He also contributed an early version of the variadic attribute API for Qi.

[*Daniel James] for improving and maintaining Quickbook, the tool we use for this documentation. Also, for bits and pieces here and there such documentation suggestions and editorial patches.

[*Stephan Menzel] for his early adoption of Qi and Karma and his willingness to invest time to spot bugs which were hard to isolate. Also, for his feedback on the documentation.

[*Ray Burkholder] and [*Dainis Polis] for last minute feedback on the documentation.

[*Steve Brandt] for his his effort trying to put Qi and Karma to some use while writing a source to source language transformation tool. He made many incredible suggestions helping to improve the usability of both libraries.

[*Bryce Leylbach] (a.k.a. wash) for contributing the components ``qi::`__qi_as__` and ``karma::`__karma_as__`, for working on `__utree__` and its integration with Qi and Karma, for adding numeric parser literals, for contributing the related documentation, and for being a big help in the everyday maintenance of the library's (and our) sanity.

[*Mathias Gaunard] for his bug reports, suggestions and regression test contributions to the Lexer helping to find subtle bugs and to improve its overall usability.

[*Thomas Bernard] (a.k.a. teajay) for working on the keyword parser and for adding explicit names to the ``qi::`__qi_symbols__` component.

[*Robert Stewart] for his active participation on the mailing list, his helpful comments, examples and suggestions.

[*Thomas Taylor], [*Richard Crossley], [*Semen], and [*Adalberto Castelo] for their help in isolating problems while testing the new attribute handling code released with V2.5.

Special thanks to spirit-devel and spirit-general mailing lists for participating in the discussions, being early adopters of pre-release versions of Spirit2 from the very start and helping out in various tasks such as helping with support, bug tracking, benchmarking and testing, etc. The list include: [*Larry Evans], [*Richard Webb], [*Martin Wille], [*Dan Marsden], [*Cedric Venet], [*Allan Odgaard], [*Matthias Vallentin], [*Justinas V.D.], [*Darid Tromer], [*Brian O'Kennedy], [*Aaron Graham], [*Joerg Becker].

[*Joao Abecasis] for his early support and involvement in Spirit2 development and for disturbing my peace every once in a while for a couple of jokes.

The list goes on and on... if you've been mentioned thank Joel and Hartmut, if not, kick Joao :-)

[heading Acknowledgements from the Spirit V1 /classic/ Documentation]

Special thanks for working on Spirit /classic/ to:

[*Dan Nuffer] for his work on lexers, parse trees, ASTs, XML parsers, the multi-pass iterator as well as administering Spirit's site, editing, maintaining the CVS and doing the releases plus a zillion of other chores that were almost taken for granted.

[*Hartmut Kaiser] for his work on the C parser, the work on the C/C++ preprocessor, utility parsers, the original port to Intel 5.0, various work on Phoenix, porting to v1.5, the meta-parsers, the grouping-parsers, extensive testing and painstaking attention to details.

[*Martin Wille] who improved grammar multi thread safety, contributed the eol_p parser, the dynamic parsers, documentation and for taking an active role in almost every aspect from brainstorming and design to coding. And, as always, helps keep the regression tests for g++ on Linux as green as ever :-).

[*Martijn W. Van Der Lee] our Web site administrator and for contributing the RFC821 parser.

[*Giovanni Bajo] for last minute tweaks of Spirit 1.8.0 for CodeWarrior 8.3. Actually, I'm ashamed Giovanni was not in this list already. He's done a lot since Spirit 1.5, the first Boost.Spirit release. He's instrumental in the porting of the Spirit iterators stuff to the new Boost Iterators Library (version 2). He also did various bug fixes and wrote some tests here and there.

[*Juan Carlos Arevalo-Baeza (JCAB)*] for his work on the C++ parser, the position iterator, ports to v1.5 and keeping the mailing list discussions alive and kicking.

[*Vaclav Vesely], lots of stuff, the no_actions directive, various patches fixes, the distinct parsers, the lazy parser, some phoenix tweaks and add-ons (e.g. new_). Also, *Stefan Slapeta] and wife for editing Vaclav's distinct parser doc.

[*Raghavendra Satish] for doing the original v1.3 port to VC++ and his work on Phoenix.

[*Noah Stein] for following up and helping Ragav on the VC++ ports.

[*Hakki Dogusan], for his original v1.0 Pascal parser.

[*John (EBo) David] for his work on the VM and watching over my shoulder as I code giving the impression of distance eXtreme programming.

[*Chris Uzdavinis] for feeding in comments and valuable suggestions as well as editing the documentation.

[*Carsten Stoll], for his work on dynamic parsers.

[*Andy Elvey] and his conifer parser.

[*Bruce Florman], who did the original v1.0 port to VC++.

[*Jeff Westfahl] for porting the loop parsers to v1.5 and contributing the file iterator.

[*Peter Simons] for the RFC date parser example and tutorial plus helping out with some nitty gritty details.

[*Markus Sch''ö''pflin] for suggesting the end_p parser and lots of other nifty things and his active presence in the mailing list.

[*Doug Gregor] for mentoring and his ability to see things that others don't.

[*David Abrahams] for giving Joel a job that allows him to still work on Spirit, plus countless advice and help on C++ and specifically template metaprogramming.

[*Aleksey Gurtovoy] for his MPL library from which we stole many metaprogramming tricks especially for less conforming compilers such as Borland and VC6/7.

[*Gustavo Guerra] for his last minute review of Spirit and constant feedback, plus patches here and there (e.g. proposing the new dot behavior of the real numerics parsers).

[*Nicola Musatti], [*Paul Snively], [*Alisdair Meredith] and [*Hugo Duncan] for testing and sending in various patches.

[*Steve Rowe] for his splendid work on the TSTs that will soon be taken into Spirit.

[*Jonathan de Halleux] for his work on actors.

[*Angus Leeming] for last minute editing work on the 1.8.0 release documentation, his work on Phoenix and his active presence in the Spirit mailing list.

[*Joao Abecasis] for his active presence in the Spirit mailing list, providing user support, participating in the discussions and so on.

[*Guillaume Melquiond] for a last minute patch to multi_pass for 1.8.1.

[*Peder Holt] for his porting work on Phoenix, Fusion and Spirit to VC6.

To Joel's wife Mariel who did the graphics in this document.

My, there's a lot in this list! And it's a continuing list. We add people to this list every time. We hope we did not forget anyone. If we missed someone you know who has helped in any way, please inform us.

Special thanks also to people who gave feedback and valuable comments, particularly members of Boost and Spirit mailing lists. This includes all those who participated in the review:

[*John Maddock], our review manager, [*Aleksey Gurtovoy], [*Andre Hentz], [*Beman Dawes], [*Carl Daniel], [*Christopher Currie], [*Dan Gohman], [*Dan Nuffer], [*Daryle Walker], [*David Abrahams], [*David B. Held], [*Dirk Gerrits], [*Douglas Gregor], [*Hartmut Kaiser], [*Iain K.Hanson], [*Juan Carlos Arevalo-Baeza], [*Larry Evans], [*Martin Wille], [*Mattias Flodin], [*Noah Stein], [*Nuno Lucas], [*Peter Dimov], [*Peter Simons], [*Petr Kocmid], [*Ross Smith], [*Scott Kirkwood], [*Steve Cleary], [*Thorsten Ottosen], [*Tom Wenisch], [*Vladimir Prus]

Finally thanks to SourceForge for hosting the Spirit project and Boost: a C++ community comprised of extremely talented library authors who participate in the discussion and peer review of well crafted C++ libraries.

87. I would like to thank CEO Hermann Steppe and Chief Developer Peter Wuttke of Cortex Software GmbH for their friendly support of my work on the Icl and their permission to release the library as open source. For her genuine interest in my work and many creative and uplifting talks I want to thank my colleague Axinja Ott who contributed a lot to the success of the project.

Many thanks to Paul A. Bristow, Vicente Botet, Luke Simonson, Alp Mestan, David Abrahams, Steven Watanabe, Neal Becker, Phil Endecott, Robert Stewart, Jeff Flinn, Zachary Turner and other developers form the Boost community who supported the development of the Interval Template Library by numerous hints and feedbacks on the boost mailing list. Also helpful have been conversations, hints and contributions at the BoostCon 2009 by Jeff Garland, David Jenkins, Tobias Loew, Barend Gehrels, Luke Simonson and Hartmut Kaiser.

Special thanks for reading and improving this documentation to Neal Becker, Ilya Bobir and Brian Wood. Jeff Flinn provided valuable feedback and a codepatch to fix portability problems with CodeWarrior 9.4. Many thanks for that.

I am grateful to Hartmut Kaiser for managing the formal review of this library and to all the reviewers and participants in the related discussions, including Jeff Flinn, Luke Simonson, Phil Endecott, Eric M. Jonas, Peter Wuttke, Robert Stewart, Barend Gehrels, Vicente Botet, Thomas Klimpel, Paul A. Bristow, Jerry Jeremiah, John Reid, Steven Watanabe, Brian Wood, Markus Werle and Michael Caisse.

For sending in bug reports, code patches and suggestions for improvements after the review thanks to Denis and Marvin Sielenkemper.

88. Many thanks to Julian Gonggrijp, Rob Stewart, Andrzej Krzemienski, Matus Chochlik, Jeroen Habraken, Hartmut Kaiser, Joel De Guzman, Thijs (M.A.) van den Berg, Roland Bock, Gavin Lambert, Paul Bristow, Alex Hagen-Zanker, Christopher Kormanyos for taking part in the ['Boost.Convert] review and their valuable input.

Special thanks to:

- * Alex Hagen-Zanker, Roland Bock, Rob Stewart for their considerable and continuous contributions to the design and implementation of the library;
- * Andrzej Krzemienski for helping to partition responsibilities and to ultimately pave the way for the `boost::optional` and `std::tr2::optional` deployment;
- * Edward Diener the Boost Review Manager for helping with the converters' design, his continuous involvement, technical and administrative help, guidance and advice;
- * Joel De Guzman, Rob Stewart and Alex Hagen-Zanker for making sure the performance tests work as they should;
- * Paul Bristow for helping great deal with the documentation;
- * Kevlin Henney and Dave Abrahams for their `lexical_cast`-related insights and explanations.

89. In order of helping and advising:

- * Renato Tegov Forti for starting the `shared_library` class and writing many code lines for Boost.DLL.
- * Hartmut Kaiser for requesting a lot of cool functionality that is now part of Boost.DLL.
- * Niall Douglas for generating a lot of ideas.
- * Vladimir Prus (the review manager) and all the library reviewers for making good notes and proposing improvements to the library.
- * Rodrigo Madera for helping with MacOS debugging and fixing platform related issues.
- * Dmitry Moskalchuk for helping with Android debugging and jamfiles.
- * Klemens Morgenstern for implementing the mangled symbols loading by unmangled name, feature that was thought to be impossible.

90. The author would like to thank his wife Mary for her patience and support during the long process of converting this from a piece of C code to a template library. The author would also like to thank Phil Endecott and Frank Gennari for the improvements they've suggested and for testing. Without them this would have taken longer to develop or performed worse.

`float_mem_cast` was fixed to be safe and fast thanks to Scott McMurray. That fix was critical for a high-performance cross-platform `float_sort`.

Thanks also for multiple helpful suggestions provided by Steven Watanabe, Edouard Alligand, and others.

Initial documentation was refactored to use Quickbook by Paul A. Bristow.

3.1 BSL-1.0 (1)

Boost Software License - Version 1.0 - August 17th, 2003

Permission is hereby granted, free of charge, to any person or organization obtaining a copy of the software and accompanying documentation covered by this license (the "Software") to use, reproduce, display, distribute, execute, and transmit the Software, and to prepare derivative works of the Software, and to permit third-parties to whom the Software is furnished to do so, all subject to the following:

The copyright notices in the Software and this entire statement, including the above license grant, this restriction and the following disclaimer, must be included in all copies of the Software, in whole or in part, and all derivative works of the Software, unless such copies or derivative works are solely in the form of machine-executable object code generated by a source language processor.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A

PARTICULAR PURPOSE, TITLE AND NON-INFRINGEMENT. IN NO EVENT SHALL THE COPYRIGHT HOLDERS OR ANYONE DISTRIBUTING THE SOFTWARE BE LIABLE FOR ANY DAMAGES OR OTHER LIABILITY, WHETHER IN CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

3.2 GPL-2.0+-with autoconf exception (2)

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 59 Temple Place - Suite 330, Boston, MA 02111-1307, USA.

As a special exception to the GNU General Public License, if you distribute this file as part of a program that contains a configuration script generated by Autoconf, you may include it under the same distribution terms that you use for the rest of that program.

3.3 Zlib-style (3)

Permission is granted to anyone to use this software for any purpose on any computer system, and to redistribute it freely, subject to the following restrictions:

1. The author is not responsible for the consequences of use of this software, no matter how awful, even if they arise from defects in it.
2. The origin of this software must not be misrepresented, either by explicit claim or by omission.
3. Altered versions must be plainly marked as such, and must not be misrepresented as being the original software.

3.4 Zlib (4)

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

C. Terms of Use

1. Certain documents and files on this website contain a legend indicating that "Modification is permitted." Any person is hereby authorized, without fee, to modify such documents and files to create derivative works conforming to the Unicode® Standard, subject to Terms and Conditions herein.
2. Any person is hereby authorized, without fee, to view, use, reproduce, and distribute all documents and files, subject to the Terms and Conditions herein.
3. Further specifications of rights and restrictions pertaining to the use of the Unicode DATA FILES and SOFTWARE can be found in the Unicode Data Files and Software License.
4. Each version of the Unicode Standard has further specifications of rights and restrictions of use. For the book editions (Unicode 5.0 and earlier), these are found on the back of the title page.
5. The Unicode PDF online code charts carry specific restrictions. Those restrictions are incorporated as the first page of each PDF code chart.
6. All other files, including online documentation of the core specification for Unicode 6.0 and later, are covered under these general Terms of Use.
7. No license is granted to "mirror" the Unicode website where a fee is charged for access to the "mirror" site.
8. Modification is not permitted with respect to this document. All copies of this document must be verbatim.

D. Restricted Rights Legend

1. Any technical data or software which is licensed to the United States of America, its agencies and/or instrumentalities under this Agreement is commercial technical data or commercial computer software developed exclusively at private expense as defined in FAR 2.101, or DFARS 252.227-7014 (June 1995), as applicable. For technical data, use, duplication, or disclosure by the Government is subject to restrictions as set forth in DFARS 202.227-7015 Technical Data, Commercial and Items (Nov 1995) and this Agreement. For Software, in accordance with FAR 12-212 or DFARS 227-7202, as applicable, use, duplication or disclosure by the Government is subject to the restrictions set forth in this Agreement.

E. Warranties and Disclaimers

1. This publication and/or website may include technical or typographical errors or other inaccuracies. Changes are periodically added to the information herein; these

changes will be incorporated in new editions of the publication and/or website. Unicode, Inc. may make improvements and/or changes in the product(s) and/or program(s) described in this publication and/or website at any time.

2. If this file has been purchased on magnetic or optical media from Unicode, Inc. the sole and exclusive remedy for any claim will be exchange of the defective media within ninety (90) days of original purchase.

3. EXCEPT AS PROVIDED IN SECTION E.2, THIS PUBLICATION AND/OR SOFTWARE IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND EITHER EXPRESS, IMPLIED, OR STATUTORY, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT. UNICODE, INC. AND ITS LICENSORS ASSUME NO RESPONSIBILITY FOR ERRORS OR OMISSIONS IN THIS PUBLICATION AND/OR SOFTWARE OR OTHER DOCUMENTS WHICH ARE REFERENCED BY OR LINKED TO THIS PUBLICATION OR THE UNICODE WEBSITE.

F. Waiver of Damages

1. In no event shall Unicode, Inc. or its licensors be liable for any special, incidental, indirect or consequential damages of any kind, or any damages whatsoever, whether or not Unicode, Inc. was advised of the possibility of the damage, including, without limitation, those resulting from the following: loss of use, data or profits, in connection with the use, modification or distribution of this information or its derivatives.

G. Trademarks & Logos

1. The Unicode Word Mark and the Unicode Logo are trademarks of Unicode, Inc. "The Unicode Consortium" and "Unicode, Inc." are trade names of Unicode, Inc. Use of the information and materials found on this website indicates your acknowledgement of Unicode, Inc.'s exclusive worldwide rights in the Unicode Word Mark, the Unicode Logo, and the Unicode trade names.

2. The Unicode Consortium Name and Trademark Usage Policy ("Trademark Policy") are incorporated herein by reference and you agree to abide by the provisions of the Trademark Policy, which may be changed from time to time in the sole discretion of Unicode, Inc.

3. All third party trademarks referenced herein are the property of their respective owners.

H. Miscellaneous

1. Jurisdiction and Venue. This website is operated from a location in the State of California, United States of America. Unicode, Inc. makes no representation that the materials are appropriate for use in other locations. If you access this website from other locations, you are responsible for compliance with local laws. This Agreement, all use of this website and any claims and damages resulting from use of this website are governed solely by the laws of the State of California without regard to any principles which would apply the laws of a different jurisdiction. The user agrees that any disputes regarding this website shall be resolved solely in the courts located in Santa Clara County, California. The user agrees said courts have personal jurisdiction and agree to waive any right to transfer the dispute to any other forum.

2. Modification by Unicode, Inc. Unicode, Inc. shall have the right to modify this Agreement at any time by posting it to this website. The user may not assign any part of this Agreement without Unicode, Inc.'s prior written consent.

3. Taxes. The user agrees to pay any taxes arising from access to this website or use of the information herein, except for those based on Unicode's net income.

4. Severability. If any provision of this Agreement is declared invalid or unenforceable, the remaining provisions of this Agreement shall remain in effect.

5. Entire Agreement. This Agreement constitutes the entire agreement between the parties.

3.32 GPL-3.0+-with-bison-exception (32)

GNU GENERAL PUBLIC LICENSE
Version 3, 29 June 2007

Copyright © 2007 Free Software Foundation, Inc. <<https://fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install or run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products for individuals to use, which is precisely where it is most unacceptable. Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work. A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

- a) The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".
- c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.
- d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

- a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
- b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.
- c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.
- d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or
- f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging

organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work,

unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively state the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) <year> <name of author>
```

This program is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program. If not, see [<https://www.gnu.org/licenses/>](https://www.gnu.org/licenses/).

Also add information on how to contact you by electronic and paper mail.

If the program does terminal interaction, make it output a short notice like this when it starts in an interactive mode:

```
<program> Copyright (C) <year> <name of author>  
This program comes with ABSOLUTELY NO WARRANTY; for details type `show w'.  
This is free software, and you are welcome to redistribute it under certain  
conditions; type `show c' for details.
```

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, your program's commands might be different; for a GUI interface, you would use an "about box".

You should also get your employer (if you work as a programmer) or school, if any, to sign a "copyright disclaimer" for the program, if necessary. For more information on this, and how to apply and follow the GNU GPL, see [<https://www.gnu.org/licenses/>](https://www.gnu.org/licenses/).

The GNU General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License. But first, please read [<https://www.gnu.org/licenses/why-not-lgpl.html>](https://www.gnu.org/licenses/why-not-lgpl.html).

Bison Exception

As a special exception, you may create a larger work that contains part or all of the Bison parser skeleton and distribute that work under terms of your choice, so long as that work isn't itself a parser generator using the skeleton or a modified version thereof as a parser skeleton. Alternatively, if you modify or redistribute the parser skeleton itself, you may (at your option) remove this special exception, which will cause the skeleton and the resulting Bison output files to be licensed under the GNU General Public License without this special exception.

This special exception was added by the Free Software Foundation in version 2.2 of Bison.

3.33 GPL-2.0+-with-bison-exception (33)

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details. You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 59 Temple Place - Suite 330, Boston, MA 02111-1307, USA.

As a special exception, when this file is copied by Bison into a Bison output file, you may use that output file without restriction. This special exception was added by the Free Software Foundation in version 1.24 of Bison.

3.34 GPL-2.0 (34)

GNU General Public License, version 2

GNU GENERAL PUBLIC LICENSE
Preamble
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION
How to Apply These Terms to Your New Programs
GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.
Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you

distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you

(whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE

WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

one line to give the program's name and an idea of what it does.
Copyright (C) yyyy name of author

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA. Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'. This is free software, and you are welcome to redistribute it under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items-- whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program `Gnomovision' (which makes passes at compilers) written by James Hacker.

signature of Ty Coon, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

3.35 Dual-license (35)

This file is dual licensed under the MIT and the University of Illinois Open Source Licenses. See LICENSE.TXT for details.

3.36 Dual-license (36)

This code may be used under either of the following two licences:

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE. OF SUCH DAMAGE.

3.40 Apache-2.0 (40)

Apache License

Version 2.0, January 2004

<http://www.apache.org/licenses/> TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the

terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability. END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

3.43 MS-PL (43)

Microsoft Public License (Ms-PL)

This license governs use of the accompanying software. If you use the software, you accept this license. If you do not accept the license, do not use the software.

1. Definitions

The terms "reproduce," "reproduction," "derivative works," and "distribution" have the same meaning here as under U.S. copyright law. A "contribution" is the original software, or any additions or changes to the software. A "contributor" is any person that distributes its contribution under this license. "Licensed patents" are a contributor's patent claims that read directly on its contribution.

2. Grant of Rights

(A) Copyright Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free copyright license to reproduce its contribution, prepare derivative works of its contribution, and distribute its contribution or any derivative works that you create.

(B) Patent Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free license under its licensed patents to make, have made, use, sell, offer for sale, import, and/or otherwise dispose of its contribution in the software or derivative works of the contribution in the software.

3. Conditions and Limitations

(A) No Trademark License- This license does not grant you rights to use any contributors' name, logo, or trademarks.

(B) If you bring a patent claim against any contributor over patents that you claim are infringed by the software, your patent license from such contributor to the software ends automatically.

(C) If you distribute any portion of the software, you must retain all copyright, patent, trademark, and attribution notices that are present in the software.

(D) If you distribute any portion of the software in source code form, you may do so only under this license by including a complete copy of this license with your distribution. If you distribute any portion of the software in compiled or object code form, you may only do so under a license that complies with this license.

(E) The software is licensed "as-is." You bear the risk of using it. The contributors give no express warranties, guarantees, or conditions. You may have additional consumer rights under your local laws which this license cannot change. To the extent permitted under your local laws, the contributors exclude the implied warranties of merchantability, fitness for a particular purpose and non-infringement.
