

DIGITAL INDUSTRIES SOFTWARE

Teamcenter Partner Connect

Supporting timely and seamless collaboration between original equipment manufacturers and partners

Benefits

- Facilitate seamless collaboration and efficiency between OEMs and external partners
- Provide granular control over data access, allowing OEMs to selectively expose data to partners by setting specific start and end dates
- Reduce administrative overhead with a fast, simplified onboarding process for external partners, providing access to the OEM's Teamcenter site and guiding them through the collaboration process

Summary

Every original equipment manufacturer (OEM) that uses Siemens Digital Industries Software's Teamcenter® software, which is part of the Siemens Xcelerator business platform of software, hardware and services, hosts a site where partners can use it to collaborate. Teamcenter serves as the repository for product information, including parts, assemblies, and bill-of-materials (BOMs). When an OEM collaborates with an external company, the objective is to share data and receive updates. This is facilitated by using Teamcenter Partner Connect, enabling OEM users to selectively expose data to one or more partners at a granular level while setting specific start and end dates for access.

Users can select multiple line items in a BOM, add partners to engineering changes or share vendor parts with a partner. Partner users receive email notifications and access Teamcenter just like internal users, starting with a restricted view of shared data determined by the OEMs.

SIEMENS

Benefits *continued*

- Scale to meet the needs of OEMs of all sizes with the ability to accommodate diverse partnership arrangements, offering flexible collaboration options
- Safeguard proprietary information about your products and protect the interests of your supply chain

Throughout the collaboration, OEMs retain control: They can mark contracts as obsolete to revoke data access or have Teamcenter automatically remove access once the contract ends. This makes sure that limited data is shared with select users for a finite time, alleviating the burden of managing partner access for individual users.

Features

- Granular time-bound access to data inside your primary Teamcenter instance
- Support export controls compliance and protect intellectual property (IP) with enhanced access control lists (ACL)
- Manage and control a list of approved partners while leveraging vendor management
- Allow partners to participate in workflow processes such as the engineering change process
- Use computer-aided design (CAD) integration to allow direct collaboration with multi-CAD suppliers
- Available since Teamcenter 12.4
