

DIGITAL INDUSTRIES SOFTWARE

Next-generation, design-centric collaboration

Teamcenter Share from Siemens Digital Industries Software

Benefits

- Collaborate seamlessly across multiple domains and products
- Unite teams and customers around a single source of truth
- Access and share data from anywhere at anytime
- Accelerate digital transformation

Overview

The world-class, next generation collaboration tools of Teamcenter Share from Siemens help you collaborate on design and engineering projects in the cloud. Connected to products across the Siemens Xcelerator portfolio, Share is a rich set of capabilities designed to address your collaboration needs, enabling you to collaborate with colleagues, partners and customers -- instantly, securely and easily.

Teamcenter Share solves today's collaboration challenges. As traditional offices with co-located teams become rarer and teams are dispersed locally and even globally, Share offers the tools to leverage cloud collaboration to improve productivity. These teams are not just made up of internal employees. Share also connects you with your supply chain and customers to ensure success.

Making digital transformation more accessible, flexible and scalable

Teamcenter Share has the flexibility to provide the level of collaboration you need, from providing your team with secure, central storage with optional data management tools, to enabling ad-hoc collaboration with external stakeholders thanks to easy e-mail address-based sharing.

Next-generation, design-centric collaboration

Features

- Secure cloud storage with desktop synchronization
- Permission-based project sharing
- Task management
- Augmented reality

Collaboration capabilities

Teamcenter Share extends your engineering environment through a connected cloud-based service for fast collaboration across multiple domains and software solutions. Share's rich set of capabilities features cloud storage with desktop synchronization, secure project sharing with task management, design-centric view and markup and browser-based access.

Secure cloud storage

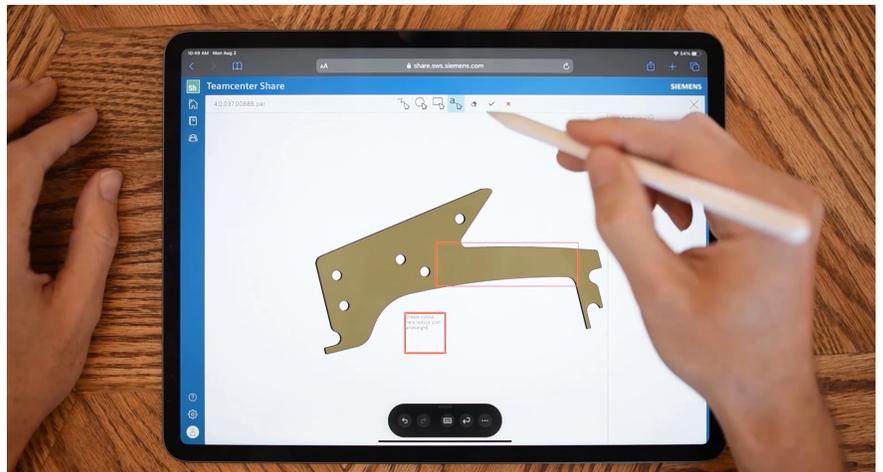

Confidently save your design data to the cloud. Independently verified for data security and integrity, Share follows Siemens's security baselines and leverages leading technology for data protection and storage.

Desktop file syncing

Sync your design data from your desktop to the cloud. Data is always available and backed up on the cloud. Share's integration with products in the Siemens Xcelerator portfolio allows you to access shared project data from, without leaving the application.

Permission-based project sharing

Protect your intellectual property while sharing projects with customers and suppliers. Share with anyone while controlling the level of access to your designs and data.

Engineering-centric view and markup

View, measure and mark up models in a three-dimensional, engineering-centric space. Mark ups and comments are completely traceable and available online and from within your design software.

Next-generation, design-centric collaboration

Augmented reality

Experience digital prototypes in real-world environments. Augmented Reality (AR) allows a design to be showcased in its intended environment from your smart device, even before it is built.

Messaging and notifications

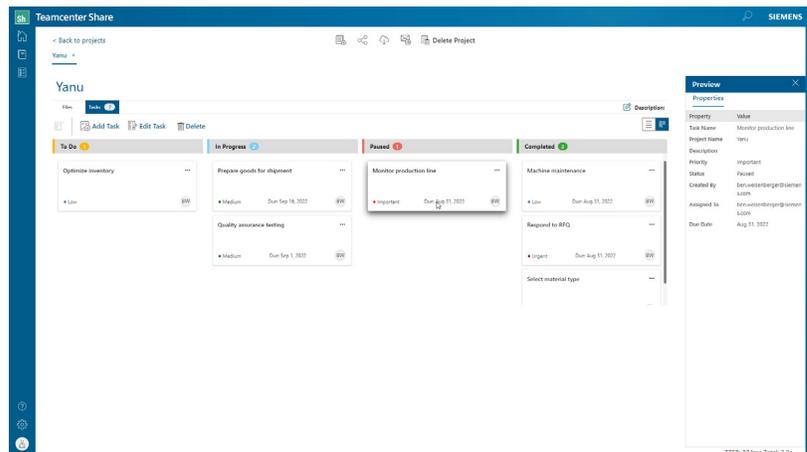

Communicate more efficiently with complete traceability and the ability to track issues and add commentary. Messages and notifications available in-app and via email.

Any-device, instant-on access

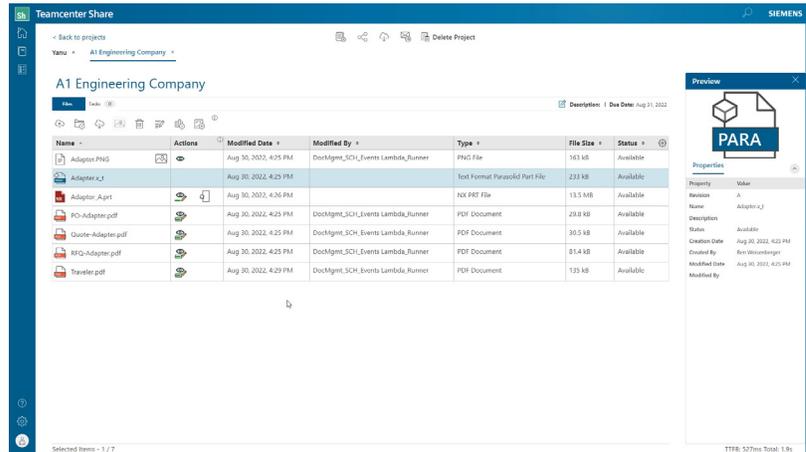

Collaborate from home, the office, or in-transit with browser-based access on your phone, tablet, Chromebook, Mac, PC and more. No additional IT infrastructure required.

Task management

Accelerate your collaboration by managing who's doing what, by when, and in what order. Set due dates, priority, and reference project files. Individuals can communicate deliverable completion through an any-device project dashboard and intuitive Kanban boards.

Next-generation, design-centric collaboration

Multi-user overwrite protection

Collaborate with confidence from a single source of truth. Share allows users to synchronize files as they work, making collaboration faster and easier than ever before.

Additional storage

The benefits of Share grow with each additional subscription. The base plan includes 500GB of storage, each additional subscription boosts online storage by 5GB. Increased storage packages up to 100TB can be purchased.

Connection to Teamcenter

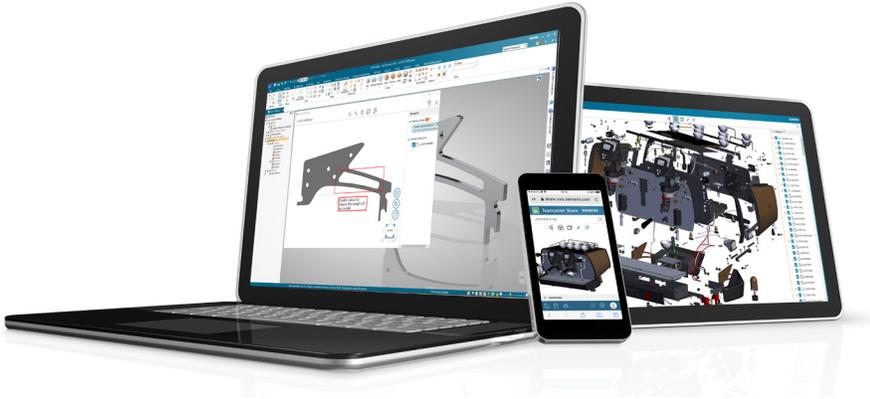

When using Teamcenter to plan, design, and share product information and processes within your company, Share securely integrates with your managed workflows to share files with collaborators outside your company.

A catalyst for digital transformation

Siemens Xcelerator is the comprehensive, integrated portfolio of software, services and an application development platform from Siemens designed to help companies of all sizes become digital enterprises. The Siemens Xcelerator portfolio of products accelerates digital transformation, empowering companies to leverage complexity as a competitive advantage.

The Siemens Xcelerator portfolio encompasses software solutions that support an array of engineering disciplines, such as mechanical, electronics or software design tools, simulation environments and manufacturing operations planning and management solutions. Siemens Xcelerator also contains software and services that help improve and evolve processes, including product and application lifecycle management solutions, low-code application development and cloud-based analytics. Finally, native integrations between the engineering and process solutions ensure that data can flow freely.

Next-generation, design-centric collaboration

Siemens Xcelerator as a Service

Share is available as part of Siemens Xcelerator as a Service (XaaS) subscriptions. XaaS provides ongoing value via connection to the cloud, further enhancing collaboration and cross domain capabilities, with new functionality being added over time.

From startup to large enterprise, you can scale your design, simulation, manufacturing and IoT capabilities to match product and market requirements. Utilize new technologies quickly and cost-effectively, collaborate securely across engineering domains, and leverage your ecosystem as a network of innovation partners.

XaaS gives you the power of the world's most comprehensive digital twin – in the most accessible, scalable and flexible form.
