

ACTEMIUM

Actemium builds a fully automated “warehouse of the future” for Terumo

Customer Challenge

- Terumo, a global medical company, wanted to transform its internal logistics with a **full automated, future-proof warehouse** that delivers high **efficiency, reliability and sustainability** — improving throughput and operational performance with minimal manual intervention.

Solution

- Actemium delivered a **100 % Siemens hardware and software automation solution** to realise a **fully automated warehouse** environment — from material handling and storage systems to integrated control and digitalized operations — enabling seamless and reliable logistics workflows.

Customer benefit

- **Enhanced efficiency:** Fully automated workflows reduce manual handling and speed up order processing.
- **High reliability:** A standardized Siemens solution improves uptime and stable operation in a demanding logistics environment.
- **Sustainability:** Automation delivers consistent performance with improved resource usage and reduced waste
