

# GSW-University Certifications

Certifications establish the Siemens expertise standard to protect customers' and partners' investments in Siemens solutions. The certification program enables delivery of product and role-based certifications to validate knowledge, skills, and expertise in the use of our products.

## Why getting Siemens Grid Software certified?

- + Showcase increasing levels of proficiency – from Overview to User to Expert Skill levels
- + Increase ramp-up time and earnings from investment
- + Gain on-the-job proficiency and competitive advantage

## Skill Levels

The Training Skill Level indicates the learner's skill and knowledge after training. Not all trainees need to achieve the same training skill level in a subject area.

Training Skill Level	Skills Acquired	Typical Trainees
Basic	A basic knowledge of the functions, interfaces, and issues	Those who need to discuss the subject with users and experts
User	The skills necessary to accomplish given tasks.	Those who need to perform the subject tasks
Expert	The special skills and knowledge required to analyze problems and provide guidance to others	Those who need to teach, troubleshoot, and/or enhance the product

## Grid Software University offers following:

- + Learning Events, which support onboarding your core team, through solutions like instructor-led training (virtual or in-person) and on-demand training
- + Learning Programs, which support enterprises in identifying training needs, assess target groups and architect the right set of solutions to ramp-up towards an educated workforce and support performance whenever needed
- + Certification can be achieved by attending a Learning Event, and/or Learning Program in combination with certification requirement
