# SITRANS P420 Pressure Transmitter with **5-Year Run-Time warranty!**

The SITRANS P420 transmitter powered warranty is based on 5 years of operating hours, not the delivery dates.

We are excited to announce a new warranty program for the SITRANS P420 pressure transmitters. This 5-year run-time warranty is based on the transmitter's actual operating hours instead of its shipment date. Every P420 transmitter shipped to or sold to the USA will automatically receive this extended warranty at no additional cost, and with no additional steps required.

Siemens stands behind the SITRANS P420 pressure transmitter's reliability. With an impressive Mean Time Between Failure (MTBF) of 382 years, we can confidently extend this benefit to our customers.

### Why It Matters

The SITRANS P420 features an operating hours counter that only increments when the unit is powered. This means the warranty period is based on actual usage, not idle time. This makes the P420 ideal for applications with long timelines between procurement, installation, and operation, as well as for stocking or spare-parts programs.

### How It Works

The SITRANS P420's operating hours register can be read via PDM, PACTware, handheld communicator, and more. This register determines the remaining warranty of the transmitter.

This run-time warranty applies to P420 pressure transmitters shipped or sold to customers in the USA and is valid for up to 7 years after shipment from Siemens. For customers outside the USA, the standard Siemens warranty applies.
