rem -------------------------------------------------------------------
rem
rem This script provides a template for customizing and launching the
rem JT2Go 13.2 installer.  Controlling the installer in this manner will:
rem
rem     * allow for preselection of features to be installed
rem     * prefill required fields (e.g. licensing options)
rem     * ease deployment to a large number of users.
rem
rem To use this script, simply uncomment and fill in the proper options
rem below, and choose the proper options for the install, or feel free
rem to otherwise modify it to fit your situation.
rem
rem For some Windows Installer options, there are more possible values than
rem are listed here.  For the complete Windows Installer command line reference, see
rem http://msdn.microsoft.com/library/default.asp?url=/library/en-us/msi/setup/command_line_options.asp
