Learning Tracks

Learning Tracks offer a list of recommended Live and On Demand Training courses tailored to specific areas of interest or business needs. Siemens offers role-based training, targeting specific job roles and necessary skills. Job roles link to job activities, and one person may benefit from training for several roles. This guideline helps customers create effective learning paths.

Role-based Training

				Job Role	Job Activities	
				Management	Making decisions at all product levels	
				Database Administrator/ Engineer	Defining the structure of the database, trouble shooting, defining data, coordinating data migration activities, backing up and restoring the database	
				System Administrator	Installing and upgrading the software incl. 3rd party products, ensuring the security of the system, tracking of problem reports	
				System Hardware Maintainer/Administrator	Installing, testing, and commissioning the hardware, diagnosing problems, maintaining spare parts	
				Application Programmer	Specifying, designing, and/or implementing the application logic and data requirements	
				Operator/Dispatcher	Operating the process system using the application software	

The Post-Training Skill Level reflects the learner's proficiency and understanding following the completion of training.

Post-Training Skill Level	Skills Acquired	Typical Trainees
Overview	A basic knowledge of the functions, interfaces, and issues	Those who need to discuss the subject with users and experts
User	The skills necessary to accomplish given tasks.	Those who need to perform the subject tasks
Expert	The special skills and knowledge required to analyze problems and provide guidance to others	Those who need to teach, troubleshoot, and/or enhance the product
