Make Sprites Bounce Around

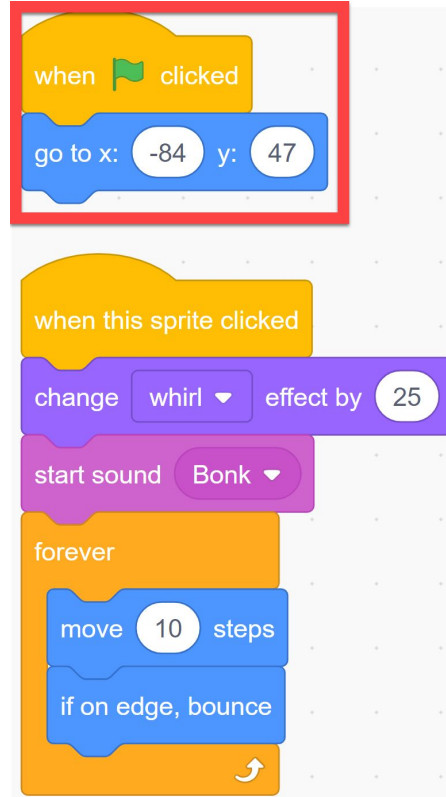

Add code to make a sprite bounce around

1. What happens when you put other motion and looks block inside the forever loop?

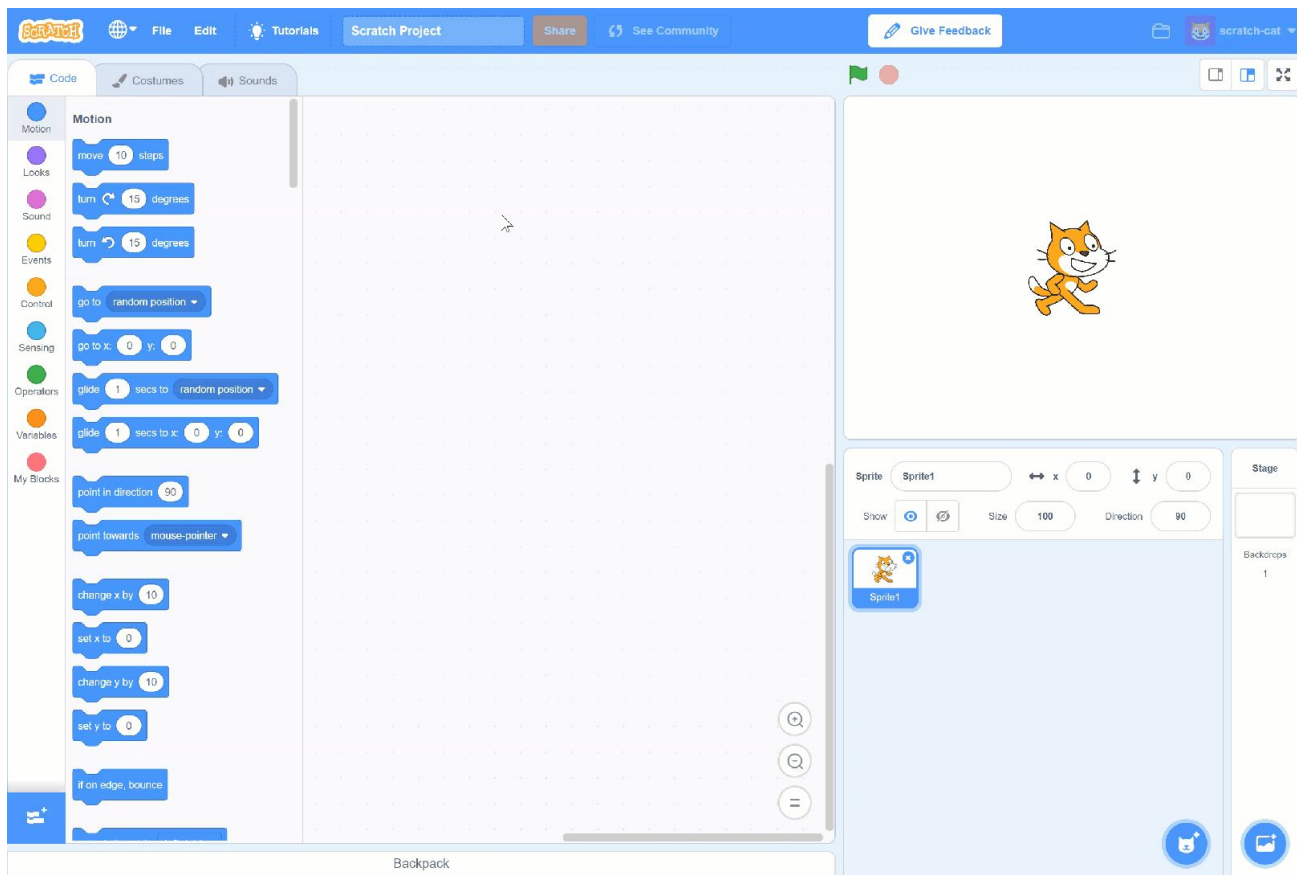

To reset a sprite's position . . .

1. Drag the sprite to its starting location, then add a “go to x: _ y: _” block to a “when green flag clicked” block to reset a sprites position when the green flag is clicked
 - a. Experiment with the x and y numbers to see how it changes its starting location

Use the tutorial button for more ideas and tips

Now, Coding is Elementary.
