

Noam Lovinsky is Grammarly's Chief Product Officer, leading the company's product, design, data science, and growth teams.

Noam has held senior product leadership roles at Meta, where he helped to start and scale the new product experimentation teams focused on zero-to-one product development. Previously, he was responsible for product management, design, growth, analytics, and performance marketing at Thumbtack, a local services marketplace. He has also built multiple businesses and sold one of his companies to YouTube. While at YouTube, Noam led the product teams behind YouTube's apps (mobile, tablet, desktop, and TV), search and discovery, personalization, recommendations, and all viewer-facing features.

For Noam, candid and clear communication has always been the basis of every strong relationship. This is just one of the many reasons that he's thrilled to work on Grammarly, a product that empowers every individual to communicate effectively and be understood so they can be the best version of themselves and achieve their greatest potential.

Noam has a BS in Computer Science and Economics from the University of California, Berkeley, and he lives in San Francisco with his wife and two young children.
