Notifying New York City Health Officials if Employee Tests Positive

You may notify other staff or customers/clients that they may have been exposed, but do not share the name of the employee who tested positive. Explain to employees and customers/clients that you must protect employee privacy and cannot discuss particular employee medical conditions.

The NYC Test and Trace Corps will attempt to interview all people diagnosed with COVID-19 to identify close contacts who were potentially exposed. These close contacts will be directed to get tested and isolate based on their exposure. If a person is concerned that they were exposed to a case but the person has not been contacted by the NYC Test and Trace Corps, the person can speak to their health care provider to discuss COVID-19 testing options or visit nyhealthandhospitals.org/test-and-trace/testing.

Prepare

SCENARIO

A new vaccine was approved and we need to build a protocol for administering and distributing to employees.

HOW RESILIENCE HEALTH HELPS

You receive curated operational checklists and evidence-based vaccine protocols making your team prepared well in advance.

Operational Guidance

We answer your most pressing questions through research-backed and expert-vetted guidance, providing you with a single hub for best practice workplace protocols.

COVID-19 Vaccine: The Role of Employers

What's the role of employers in the COVID vaccine? With several promising candidates nearing completion of Phase 3 trials, a COVID vaccine may become available in the next few months. Despite a lack of long-term safety and efficacy data, a COVID vaccine is likely to be recommended to the general population sometime after it is approved. When this occurs, employers in office-based business will want to be informed on what their role will be in response to guidance from public health authorities and government agencies. In this report, we provide evidence-based and expert-vetted recommendations for employers so they can implement policies that conform to public health guidance while protecting the health and safety of their workers.

COVID-19 Compliance: Ensuring Employees Follow Protocols that Keep the Workplace Safe

COVID-19-specific health protocols are essential for employees to more safely return to work, but can be challenging to follow. As employers require their employees to wear masks, maintain physical distance, report symptoms, and adopt other new behaviors, how do they ensure employees comply? How should employers respond when they don't? Drawing on social and behavioral science, our experts recommend immediately actionable strategies and tactics to shape employee behavior and increase compliance with COVID-19 health and safety protocols.
