

# Revolutionize your piling operations

Vermeer point-to-point automation with Trimble Groundworks

**The future of pile driving is here: unprecedented precision, productivity and profitability.**

Speed, accuracy and safety are critical to successful solar piling. Introduce the power of Vermeer point-to-point automation, guided by the Trimble Groundworks machine control system. This game-changing integration isn't just an upgrade — it's a quantum leap forward, streamlining your operations and delivering the consistency and efficiency solar farm projects demand.

**Unrivaled accuracy:** Install piles consistently to spec — reducing rework

**Boost productivity:** Reduce navigation time and accelerate your workflow

**Enhanced safety:** Minimize operator input and increase situational awareness

**Labor savings:** Reduce your crew size and reallocate resources

**Fuel efficiency:** Less machine idling means a greener, more cost-effective operation

Automatically navigate to the precise pile location

**Ready to see the difference?** Contact your local Trimble dealer today for a demo!

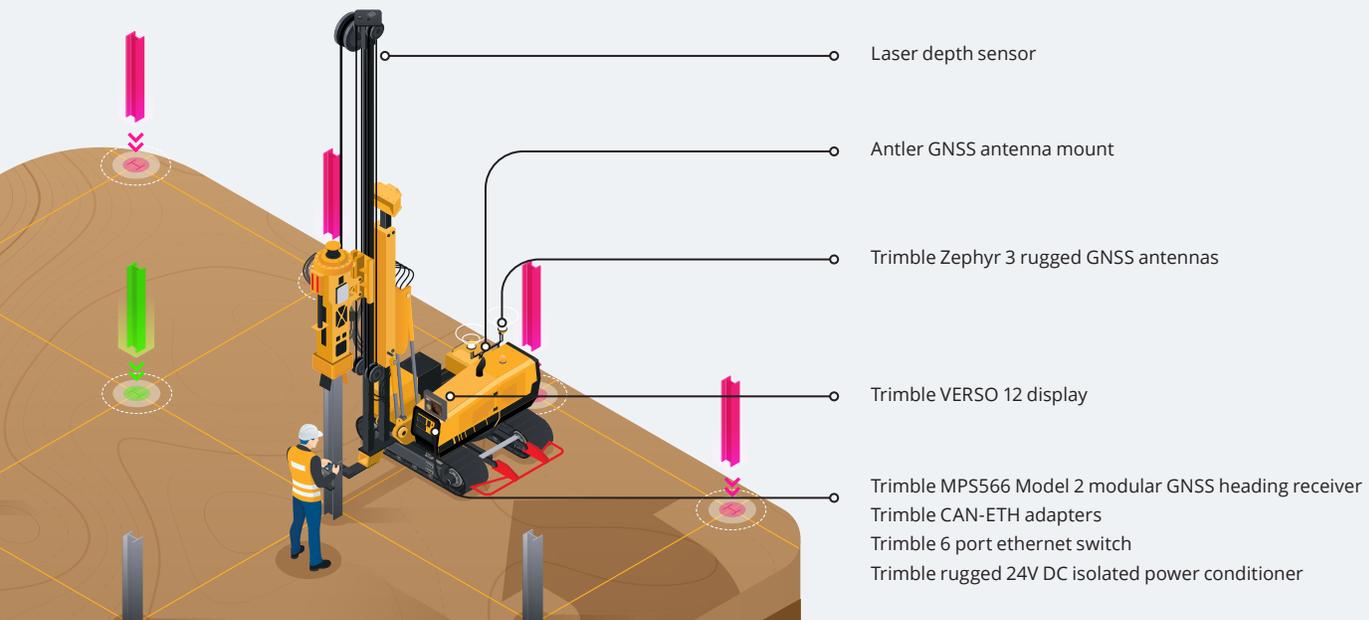

# Pile faster with less labor

- 01 **Designs to machines:** Send pile plans from the office directly to machines in the field
- 02 **Automated navigation:** Vermeer pile drivers autonomously navigate to the precise pile locations
- 03 **Reduced rework:** Every pile is driven precisely to spec while logging as-built data for productivity and quality monitoring

## Maximize productivity with row-to-row automation

Take efficiency further by eliminating the need for operators to manually turn the machine into the next row. Automatically navigate between rows for even faster installation times and less room for operator error from start to finish.

*(Only available on the PD25R)*
