

Trimble WorksManager

Software

Trimble® WorksManager is a mobile-friendly site-management software that keeps machine operators and survey crews connected to the information they need to get the job done right the first time. Easily transfer data to the jobsite without leaving the office, reducing delays and minimizing downtime.

Boost uptime with detailed 3D data that you can measure and edit

Experience a new level of insight with advanced 3D site visualization. Field and office teams can view and edit current construction-ready designs, make quick measurements and share insights from survey, drone and machine data.

Save time and prevent errors

Increase efficiency and save drive time by remotely sending 3D designs to the jobsite, keeping machines working from the latest designs. The practical user interface lets supervisors see which machines are using which designs, helping prevent costly mistakes and rework.

Connecting every machine, no matter the technology

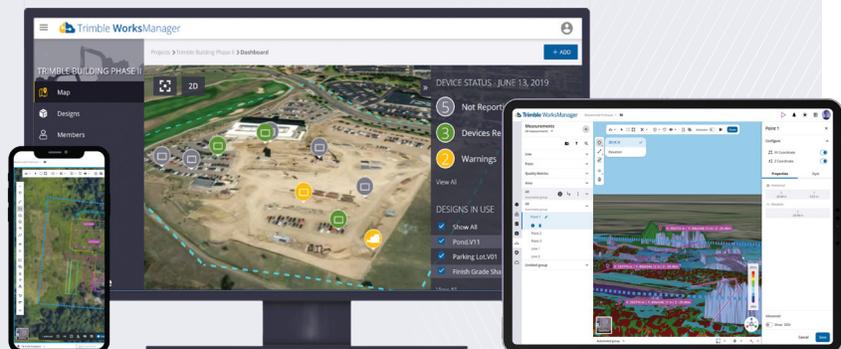

Trimble WorksManager now enables design sharing across non-Trimble grade control systems, so you can deliver the latest data to all the construction tech on site. Keep every machine working from the same design, reduce costly delays and boost your ROI.

Track and assist your assets remotely

Keep projects running smoothly with real-time visibility into each device's location, firmware and design version. Reduce drive time and downtime with remote troubleshooting, so you can resolve issues faster and keep everyone on track.

From reducing rework to keeping projects on schedule, WorksManager helps you make smarter decisions, right when you need them.

- **Confident decisions:** Always work with the latest 3D designs.
- **See everything, anywhere:** Track machine status and location in real time.
- **One design for any on-site tech:** Share designs with non-Trimble grade control tech.
- **Turn issues into fixes:** Troubleshoot tech issues from the office, no travel required.

Trimble WorksManager

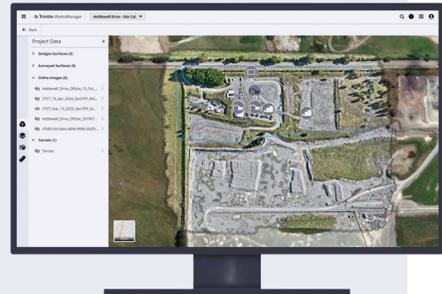

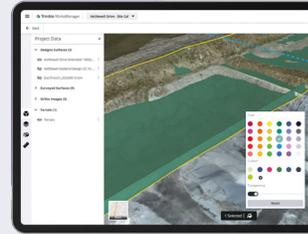

Software

WorksManager gives you confidence over your site operations and workflows to keep projects running smoothly:

- Measure material quantities and grade/slope conditions from anywhere with linear, area and volume tools
- Track machine locations every 30 seconds and status every 5 minutes
- Receive automatic firmware and warranty notifications
- Extend coverage over larger worksites with IBSS
- Integration with Trimble B2W Schedule software
- View site progress in near real-time and troubleshoot issues
- Reduce operator downtime with remote assistance

Only need the essentials? Try WorksManager Core

For those who don't need all the advanced features, WorksManager Core offers a lighter version of WorksManager. It gives you the essentials to stay connected, transfer data and keep projects on track, perfect for teams who want simplicity without sacrificing control.

WorksManager subscription tiers

	Core	Pro
Remote file transfer: Saves you drive-time	✓	✓
Remote troubleshooting: Keep operators running	✓	✓
Map view: See where all devices are and their status	✓	✓
View 2D linework: Verify designs at a glance	✓	✓
3D design viewing and editing: Make edits when needed		✓
View 3D terrain: Complete in-field quality assurance (QA)		✓
ISO 15143-4 worksite data exchange standards: Share designs with non-Trimble grade control tech		✓
Import ortho images: Get a progress snapshot		✓
Point, linear and volume measurement: Report progress and plan for the next phase		✓
