Trimble WorksManager

Software

Trimble® WorksManager is a mobile-friendly site management software that helps ensure projects stay on track, minimising downtime and reducing delays. Send construction-ready models to machines and survey crews, manage devices and machines across job sites and troubleshoot issues — without leaving the office.

Visualise, measure and modify your data from anywhere

Enable real-time field and office collaboration with detailed 3D site visualisation that includes designs, surveyed surfaces, as-builts, drone data and third-party data. Measure and track progress by comparing site data to the project designs and make minor design edits on the fly using the drafting space.

Turn drone flights into actionable site data

Easily process raw drone data with survey-grade accuracy and view it overlaying the latest project design. Construction teams can use the resulting detailed site view to calculate volume and progress, verify material placement and coordinate field operations directly within existing Trimble WorksManager workflows.

Reduce downtime and drive time

Eliminate unnecessary drive time with automatic version control, ensuring the most up to date 3D designs are sent directly from the office to the machines on the job site. Easily troubleshoot operator issues using remote log-in so operators stay on design and on schedule.

Eliminate costly rework and improve safety

Identify, track and resolve design issues before machines start to work. Construction industry BCF workflows ensure site issues are visible across Trimble Connect®, Trimble Siteworks, Trimble Earthworks, and Trimble WorksManager.

Keep machine operators and survey crews connected to the information they need to get the job done right the first time:

- **Make smarter, more confident decisions:** Always work with the latest 3D designs
- **Ensure machines stay running:** Edit, publish and export minor linework or design updates to machines, without waiting on the office
- **Manage your jobsite from anywhere, anytime:** Track machine status and location
- **Remote troubleshooting:** Manage tech issues from the office.

Available through our flexible subscription options, ensuring that you always have the latest technology and world-class service, without costly upfront investments.

Ask your local Trimble dealer about getting your Trimble construction tech on subscription.

Available on Trimble Works Subscription

INFO SHEET

Trimble WorksManager

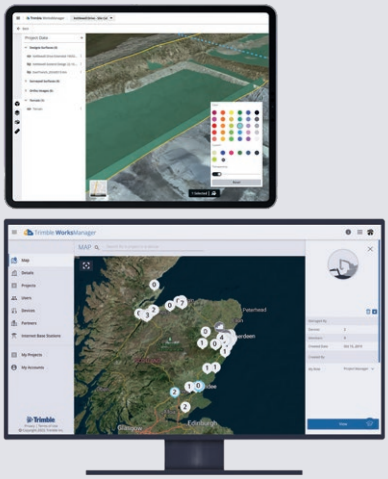

Software

Be supported

WorksManager has a Trimble AI assistant that delivers support from manuals and verifies active designs and device status, eliminating manual search time without leaving the user interface.

Select the version of WorksManager that works for you

Choose the right tier for your workflow: WorksManager Core covers all the essentials to keep your projects connected and on track, while WorksManager Pro adds advanced 3D site visuals and drone data processing.

WorksManager subscription tiers	Core	Pro
Remote file transfer: Reduce drive time	✓	✓
Remote troubleshooting: Keep operations running	✓	✓
Map view: See the location and status of all devices	✓	✓
View 2D linework: Verify designs at a glance	✓	✓
Drone data processing: Process mission data quickly and view it overlaying the latest project design		✓
3D site visualisation: Access a 3D collaborative view of the site		✓
Drafting space: Easily create, modify and clean up design linework and boundaries		✓
Measurement tools: Calculate volume, slope and area on live surface models		✓
Issue management: Standardise BCF workflow across the Trimble ecosystem		✓
AI assistant: Answer site questions using Trimble support docs and real-time project data		✓
ISO 15143-4 worksite data exchange standards: Share designs with non-Trimble grade control tech		✓
