CHAT HANDOUTS

Thank you Dr. Cronin. Do they recommend the standard vaccine schedule for genital/mucosal HPV? It sounded like an HPV vaccine to alpha-HPV type is not yet available.

Keyvan Nouri:

Excellent lecture Dr. Cronin. Do you know when is the new cutaneous HPV vaccine going to be available for use?

Combined Systemic and Intratumoral Administration of Human Papillomavirus Vaccine to Treat Multiple Cutaneous Basaloid Squamous Cell Carcinomas

Anna J. Nichols, MD, PhD, Adrianna Gonzalez, MD, PhD, Michael J. Kirsner, MD, PhD, Michael C. Rosen, MD, Wellington Guzman, BS, Harold Rabinovitz, MD, PhD, and Tim Ioannides, MD

IMPORTANCE Squamous cell carcinoma is the second most common form of skin cancer, and its incidence is increasing. When surgical management is not an option, finding a safe and efficacious treatment is a challenge. Mounting evidence suggests that the human papillomavirus (HPV) is involved in the pathogenesis of some SCCs.

OBJECTIVE To assess whether the 9-valent HPV vaccine could be an effective treatment strategy for cutaneous SCC.

DESIGN, SETTING, AND PARTICIPANTS A phase II clinical trial was conducted at a university-based outpatient dermatology clinic with a combination of systemic and intratumoral delivery of the 9-valent HPV vaccine from March 17, 2016, to May 21, 2018.

MAIN RESULTS AND MEASURES Reduction in tumor size and number after a combination of
