

Moving the needle: Medical and skin cancer research funding

By Victoria Houghton, Managing Editor

DermWorld breaks down the latest highlights of AADA advocacy activities at the federal and state legislative and regulatory level.

Every year, the American Academy of Dermatology Association (AADA) advocates to secure funding for skin cancer prevention and melanoma research efforts through the federal appropriations process.

Collaborates: The AADA is a steering committee member of the One Voice Against Cancer (OVAC) coalition. For over 20 years, OVAC has united the nation's cancer community to advocate for long-term, sustained funding increases for cancer research and prevention. OVAC channels the passions of millions of Americans who have been affected by cancer.

Advocates: Every year, in addition to advocating on its own, the AADA joins with OVAC in asking leaders on the Labor, Health and Human Services, Education and Related Agencies (LHHS) Appropriations Subcommittee to increase funding for cancer research and education.

For the fiscal year (FY) 2021, the AADA requested:

 **CDC skin cancer prevention programs** = \$5 million

 **National Institutes of Health (NIH), including National Institute for Arthritis and Musculoskeletal Skin Diseases (NIAMS)** = \$43.7 billion

 **National Cancer Institute (part of NIH funding)** = \$6.9 billion

 **Hansen's Disease Clinics through the Health Resources and Services Administration** = Maintaining FY2020 levels

 **Defense Funded Melanoma Research** = \$20 million

Advocacy priorities

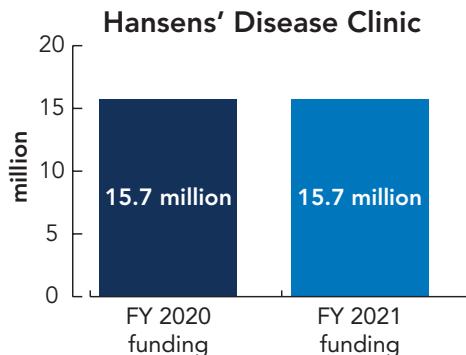

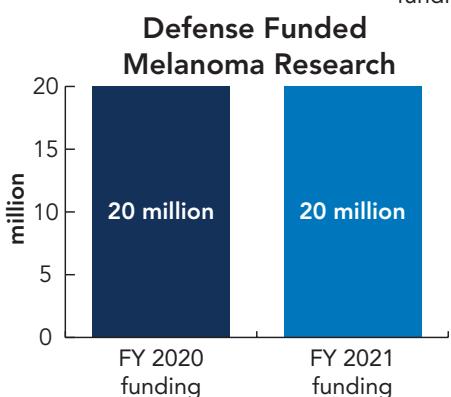

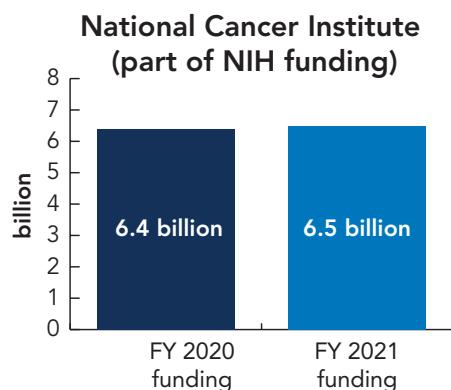

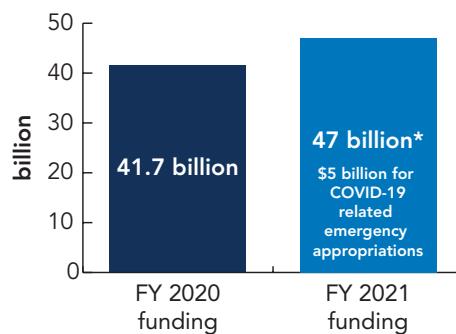

Learn about the Academy's advocacy priorities and how to join efforts to protect your practice at www.aad.org/member/advocacy/priorities.

Results: In December, Congress passed an omnibus, which is a comprehensive spending package that funds the government through Sept. 30, 2021. All funding for programs advocated for by the AADA were either increased or maintained from FY 2020 levels. The following highlights funding levels for FY 2020 and FY 2021. **DW**

**National Institutes of Health (NIH),
including National Institute for Arthritis
and Musculoskeletal Skin Diseases (NIAMS)**
