

Instructions: It is very important to read these instructions before using this coding sheet in order to understand its layout and abbreviations. Diagnoses which have different codes for different body locations are listed on the grid below. Diagnoses which are not location-specific are listed alphabetically on the Index sheet. Please read through the alphabetical list to familiarize yourself with the diagnoses. Many diagnoses have multiple names and not all of these names are included. For example "pruritus" is listed, but not "itch". Also many diagnoses could be listed in different categories. For example "atopic dermatitis" is listed but not "dermatitis – atopic". This list is not intended to replace your coding manual and includes only the most commonly used diagnoses. "NOS" indicates "not otherwise specified". Some diagnoses require secondary codes:

- "**" indicates this secondary code is required
- "+" indicates this secondary code should be added, if applicable
- "?" indicates this code requires a seventh character; an "A" indicating initial encounter, "D" indicating "subsequent encounter" or "S" indicating "Sequela"
- "<" indicates a primary code needs to be listed first, if applicable
- "#" indicates there are a number of multiple, more specific codes within this category and that the code as listed here cannot be reported. It will be necessary to use a different coding resource to find the more specific code that applies.

When a secondary code asks you to see a previous diagnosis that indicates the same secondary codes apply. This coding sheet will require changes as ICD-10 coding is better understood. If you become aware of a change that is necessary, please contact us at coding@aad.org so those changes can be instituted in the next edition.
