Pillar 3 Report

First quarter 2026

Table of contents

Notes to the reader	3
Key metrics and overview of RWEA	4
EU KM1 – Key metrics template	4
EU OV1 – Overview of total risk exposure amounts	6
EU CMS1 – Comparison of modelled and standardised risk weighted exposure amounts at risk level	7
EU CMS2 – Comparison of modelled and standardised risk weighted exposure amounts for credit risk at asset class level	8
Liquidity requirements	9
EU LIQB – Qualitative information on LCR, which complements template EU LIQ1	9
EU LIQ1 – Quantitative information of LCR	10
Credit risk	11
EU CR8 – RWEA flow statements of credit risk exposures under the IRB approach	11
Market risk	12
EU MR2-B – RWEA flow statements of market risk exposures under the IMA	12
Disclaimer & cautionary statements	13

Notes to the reader

This Pillar 3 Report provides the consolidated disclosures of ABN AMRO Bank N.V., as required by the Capital Requirements Regulation (CRR) (EU) No 575/2013 on prudential requirements for credit institutions (Part Eight), and by the Implementing Technical Standards (ITS) on public disclosures by institutions of the information referred to in Titles II and III of Part Eight of Regulation (EU) No 575/2013. The Pillar 3 Report for the first quarter of 2026 includes an update on the quarterly required disclosures, which provide comprehensive information on risk, funding and capital management. The templates included in this Pillar 3 Report have been prepared in accordance with the abovementioned regulations.

As from January 2026, the Pillar 3 information is also publicly available via the Pillar 3 Data Hub. The Pillar 3 Data Hub facilitates centralised access by all stakeholders to prudential data from all EEA institutions.

Presentation of information

This report is presented in euros (€), which is ABN AMRO's functional and presentation currency, rounded to the nearest million (unless otherwise stated). Certain figures in this report may not reconcile exactly due to rounding. Furthermore, certain percentages in this document have been calculated using rounded figures. The figures presented in this document are not required to be, nor have they been, audited or reviewed by our external auditor. Based on the ITS, this report uses the terms 'risk-weighted assets (RWA)' and 'risk-weighted exposure amount (RWEA)' interchangeably. Similarly, this report may use the terms 'banking book' and 'non-trading book' interchangeably.

Waiver policy (omitting templates and tables)

In accordance with Article 432 of the CRR, ABN AMRO may omit one or more of the required disclosures where the information provided by those disclosures is not regarded as material or is not applicable to its operations. Information in disclosures is regarded as material where its omission or misstatement could change or influence the assessment or decision of a user of that information relying on it for the purpose of making economic decisions.

ABN AMRO shall, in accordance with Article 432 of the CRR, explain the reasons for omitting any information required in the templates and tables included in the ITS.

The following templates have been identified as not applicable to ABN AMRO and therefore not included in this report:

- **EU CCR7 – RWEA flow statements of CCR exposures under the IMM:** ABN AMRO does not use the Internal Model Method (IMM) to measure the EAD for counterparty credit risk exposures. Instead, we apply the Standardised Approach for Counterparty Credit Risk (SA-CCR) to calculate the EAD for derivatives and the Financial Collateral Comprehensive Method (FCCM) for securities financing transactions (CRR 220/222). Therefore, this template is not applicable.
- **EU CVA4 – RWEA flow statements of credit valuation adjustment risk under the Standardised Approach (SA):** ABN AMRO does not use the Standardised Approach under CRR III but applies the 'full Basic Approach'. Therefore, this template is not applicable.

Executive Board approval of the report

ABN AMRO's Executive Board has approved this report and acknowledges that the institution has followed the relevant formal policies and internal processes, systems and controls in meeting the disclosure requirements under the CRR.

Key metrics and overview of RWEA

Highlights

- The CET1 ratio decreased to 15.3% as at 31 March 2026 (31 December 2025: 15.4%), mainly due to an increase in total risk exposure amount (TREA).
- During the first quarter of 2026, TREA rose by € 1.2 billion compared with the previous quarter and amounted to € 136.6 billion (31 December 2025: € 135.4 billion). This increase was driven by higher credit risk RWEA (€ 0.8 billion) and the risk exposure amount for market risk (€ 0.4 billion).
- The leverage ratio decreased to 4.8% as at 31 March 2026 (31 December 2025: 5.3%). This was primarily due to an increase in exposure measure, which was mainly driven by higher on-balance sheet exposures reflecting a seasonal pattern.
- The consolidated LCR amounted to 157% at the end of March 2026, based on a 12-month rolling average (31 December 2025: 153%).

EU KM1 – Key metrics template

As at 31 March 2026, the CET1 ratio was 15.3% (31 December 2025: 15.4%), while the pro forma CET1 ratio was 15.5%. The decrease in the CET1 ratio compared with 31 December 2025 was mainly due to an increase in total risk exposure amount (TREA). During the first quarter of 2026, TREA increased by € 1.2 billion compared with the previous quarter, mainly driven by higher credit risk RWEA. The increase in credit risk RWEA mainly reflects business developments in Corporate Banking, where Clearing was the largest contributor. This was partly offset by the impact of methodological and data quality improvements. CET1 capital remained stable at € 20.9 billion (31 December 2025: € 20.9 billion). All capital ratios were in line with the bank's risk appetite and comfortably above regulatory requirements.

EU OV1 – Overview of total risk exposure amounts

Total risk exposure amount (TREA) increased modestly by € 1.2 billion to € 136.6 billion in the first quarter of 2026 (31 December 2025: € 135.4 billion). This increase was largely driven by a € 0.8 billion rise in credit risk RWEA.

The increase in credit risk RWEA mainly reflects business developments in Corporate Banking, where Clearing was the largest contributor, followed by client lending. This was partly offset by the impact of methodological and data quality improvements related to exposures secured by immovable property.

The risk exposure amount for market risk increased in the first quarter of 2026 to € 2.0 billion (31 December 2025: € 1.6 billion).

27 Floor adjustment (before application of transitional cap)			
28 Floor adjustment (after application of transitional cap)			
29 Total²	136,567	135,398	10,925

1. Following EBA's mapping for this template, the amount excludes equity exposures subject to risk weights under the Advanced Internal Ratings Based (A IRB) approach.

2. EBA's instruction for row 16 require the inclusion of RWEAs and Own Funds requirements for Securitisation, meaning that it also includes an RWEA equivalent for the securitisation position that the bank has deducted from CET1. Under EBA's instructions, the amount from row 16 is included in the total in row 29. That would however result in a different TREA number than our actual TREA and different from the TREA reported in other templates, which in our view would be confusing for the readers. We therefore only include the RWEA for the securitisation positions that are risk weighted (the amounts presented on rows 18 & 19) in the total in row 29.

3. Row 21 and row 22 are left blank for both the current and previous reporting periods, as the approaches referenced in those rows are not applicable under the methodology currently in use. This is due to the FRTB delay, as a result of which Market Risk own funds requirements are still calculated based on the approaches in place prior to CRR III.

EU CMS1 – Comparison of modelled and standardised risk weighted exposure amounts at risk level

TREA increased to € 136.6 billion as at 31 March 2026 from € 135.4 billion as at 31 December 2025, an increase of € 1.2 billion, due to higher credit risk RWEA and a higher risk exposure amount for market risk.

The increase of € 0.8 billion in credit risk RWEA in Q1 2026 (including Counterparty Credit Risk – CCR) was primarily driven by higher trading positions in Clearing and growth in Corporate Banking, partly offset by releases derived from model updates and data quality improvements linked to exposures secured by immovable property.

The risk exposure amount for market risk increased by € 0.4 billion to € 2.0 billion during the first quarter of 2026. This increase was driven by higher VaR and SVaR levels (due to market dynamics and averaging effects) and a higher Incremental Risk Charge (IRC), as a result of higher exposures in Financials and Corporates in Credit Trading.

TREA used as the base of the output floor increased by € 2.9 billion to € 156.0 billion as at 31 March 2026 (31 December 2025: € 153.2 billion). This increase reflects both the drivers behind the higher TREA and the reduced impact on the calculation of the 'RWEA used as the base of the output floor' of the data quality improvements and models update for the mortgage portfolio (of which RWEA is calculated using Internal Ratings-Based (IRB) models).

In Q3 2025 we finalised the move to standardised credit risk approaches for certain parts of our portfolios. Consequently, the difference between the 'RWEAs calculated using the full standardised approach' and the 'RWEAs used as the base of the output floor' remains limited, mainly due to transitional arrangements (€ 0.4 billion as at 31 March 2026).

	A	B	C	D	EU D
	31 March 2026				
	Risk weighted exposure amounts (RWEAs)				
(in millions)	RWEAs for modelled approaches that banks have supervisory approval to use	RWEAs for portfolios where standardised approaches are used	Total actual RWEAs (A + B)	RWEAs calculated using full standardised approach ²	RWEAs that is the base of the output floor
1 Credit risk (excluding counterparty credit risk)	19,270	80,704	99,974	125,710	125,332
2 Counterparty credit risk	1,201	6,928	8,129	9,615	9,615
3 Credit valuation adjustment		193	193	193	193
4 Securitisation exposures in the banking book ¹		611	611	611	611
5 Market risk	1,967	2	1,969	1,202	1,202
6 Operational risk		17,628	17,628	17,628	17,628
7 Other risk weighted exposure amounts		8,063	8,063	1,467	1,467
8 Total	22,439	114,128	136,567	156,426	156,048

1. It includes the RWEAs for securitisation exposures in the banking book calculated with the SA and the ERBA approaches and excludes the RWEA equivalent for the securitisation position that the bank has deducted from CET1.

2. The bank has chosen not to follow the EBA's mapping for row 7 of this column. Part of the bank's 'other risk weighted exposure amounts' refer to add-ons that would not be applicable if the bank applied Credit Risk SA to certain portfolios. Following EBA's mapping would therefore result in double counting of RWEAs, which would not be an accurate number for the TREA at end of the output floor transitional period in row 8.

EU CMS2 – Comparison of modelled and standardised risk weighted exposure amounts for credit risk at asset class level

At the end of Q1 2026, the credit risk RWEA excluding CCR decreased by € 0.7 billion and amounted to € 100.0 billion (31 December 2025: € 100.6 billion). This slight decrease is explained by releases due to data quality improvements and model updates in mortgages, partially offset by business movements in the asset class ‘Institutions’.

In contrast, the credit risk RWEA (excluding CCR) that forms the base of the output floor rose by € 1.5 billion to € 125.3 billion as at 31 March 2026 (31 December 2025: € 123.8 billion). This is the result of increases in the asset classes Institutions, Corporates and Exposures in default in SA combined with lower benefits in the calculation of the ‘RWEA used as the base of the output floor’ from methodological and data quality improvements in mortgages (which are under modelled approaches).

Compared with Q4 2025, the share of portfolios under modelled approaches within our credit risk RWEA (excluding CCR) remained stable at 19.3%.

EU 7e Categorised as covered bonds in SA	339	570	76	647	647
EU 7f Categorised as claims on institutions and corporates with a short-term credit assessment in SA	338	426	89	515	515
8 Other non-credit obligation assets			1,921	1,921	1,921
9 Total	19,270	44,628	99,974	125,710	125,332

1. Following EBA's mapping tool, for column a, row 6 is the sum of rows 6.1, EU 6.1a, EU 6.1b and 6.2. For the other columns, row 6.2 is not included in the total for row 6.

2. The bank does not follow the EBA mapping tool for the data points in row EU 7a for columns d and EU d because the EBA mapping tool, in our view, incorrectly omits the applicable datapoints from the underlying Credit Risk SA (C07.00) template.

Liquidity requirements

EU LIQB – Qualitative information on LCR, which complements template EU LIQ1

The consolidated LCR amounted to 157% at the end of March 2026, based on a 12-month rolling average (31 December 2025: 153%).

Concentration of funding and liquidity sources

Liquidity risks are mitigated by maintaining a sufficiently large liquidity buffer and a stable and diversified funding mix to safeguard access to liquidity at any time. Client deposits are the main source of funding, which are well diversified across the Personal & Business Banking, Wealth Management and Corporate Banking client units. The remainder of the funding is raised through various long-term wholesale funding instruments. Short-term wholesale funding is raised via commercial paper and certificates of deposit programmes and is complemented by short-term deposits from professional counterparties.

Composition of the liquidity buffer

Cash at central banks and government bonds are the main components of the liquidity buffer. Retained notes are also an important source of ECB-eligible collateral, but are not LCR-eligible. The liquidity buffer (excluding retained notes) as at 31 March 2026 amounted to € 103.5 billion, based on a 12-month rolling average (31 December 2025: € 100.6 billion). The increase was mainly observed in cash at central banks.

Derivative exposures and potential collateral calls

To manage liquidity risk related to derivative exposures and potential collateral calls, the bank has an adequate pool of collateral at its disposal, which is managed proactively in accordance with its collateral management framework. This enables the bank to secure payment traffic with the central bank, meet margin calls for financial markets transactions (e.g. derivatives, securities financing and clearing) and manage the liquidity buffer within the approved risk appetite.

Currency mismatch in the LCR

Liquidity risk management focuses on significant currencies, being the euro and the US dollar. The composition of the liquidity buffer reflects this focus. The buffer consists of cash and securities, primarily in euros and secondarily in US dollars. Internal risk metrics and monitoring are in place to ensure that the currency distribution of the liquid assets is consistent with the currency distribution of the net liquidity outflows.

Other items

The EU LIQ1 template is focused on the consolidated LCR. The bank also monitors, reports and, when necessary, steers the LCR for subsidiaries (taking into account local regulations) and other regulatory scopes.

Credit risk

EU CR8 – RWEA flow statements of credit risk exposures under the IRB approach

After the transfer of a large part of our corporate portfolios to the Standardised Approach (SA) in Q3 2025, credit risk RWEA under the IRB approach stabilised at € 19.3 billion as at 31 March 2026 compared with € 19.4 billion as at 31 December 2025.

	31 March 2026	
	RWEA	
1 RWEA as at the end of the previous reporting period¹	19,359	
2 Asset size (+/-)	269	
3 Asset quality (+/-)	203	
4 Model updates (+/-)	-1,042	
5 Methodology and policy (+/-)		
6 Acquisitions and disposals (+/-)		
7 Foreign exchange movements (+/-)		
8 Other (+/-)	481	
9 RWEA as at the end of the reporting period	19,270	

1. Following EBA's mapping for this template, the RWEA includes 'Equity IRB'. As a result, the CR8 RWEA does not reconcile with the credit risk RWEA reported in the EU OV1 template.

Market risk

EU MR2-B – RWEA flow statements of market risk exposures under the IMA

The risk exposure amount for market risk increased from € 1.6 billion as at 31 December 2025 to € 2.0 billion as at 31 March 2026. This increase was primarily driven by higher Incremental Risk Charge (IRC) requirements and, to a lesser extent, by increases in the Value-at-Risk (VaR) and Stressed VaR (SVaR) components. These movements reflect heightened market volatility, averaging effects and increased credit exposures within Credit Trading.

In line with CRR requirements, VaR and SVaR are subject to capital multipliers of 3.0, resulting in 12-week average measures that exceed the most recent observations and are, therefore, more strongly reflected in regulatory capital requirements.

Disclaimer & cautionary statements

ABN AMRO has included in this document, and from time to time may make certain statements in its public statements, that may constitute 'forward-looking statements'. This includes, without limitation, statements that include the words 'expect', 'estimate', 'project', 'anticipate', 'should', 'intend', 'plan', 'probability', 'risk', 'Value-at-Risk ("VaR")', 'target', 'goal', 'objective', 'will', 'endeavour', 'outlook', 'optimistic', 'prospects' and similar expressions or variations of such expressions. In particular, the document may include forward-looking statements relating to, but not limited to, ABN AMRO's potential exposures to various types of operational, credit and market risk. Such statements are subject to uncertainties.

Forward-looking statements are not historical facts and represent only ABN AMRO's current views and assumptions regarding future events, many of which are by nature inherently uncertain and beyond our control. Factors that could cause actual results to deviate materially from those anticipated by forward-looking statements include, but are not limited to, macroeconomic, demographic and political conditions and risks, actions taken and policies applied by governments and their agencies, financial regulators and private organisations (including credit rating agencies), market conditions and turbulence in financial and other markets, and the success of ABN AMRO in managing the risks involved in the foregoing.

Any forward-looking statements made by ABN AMRO represent its current views as at the date they are made. Subject to statutory obligations, ABN AMRO does not intend to publicly update or revise forward-looking statements to reflect events or circumstances after the date the statements were made, and ABN AMRO assumes no obligation to do so.
