

# EntriWorX BIM Plugin for Revit

Seamless door scheduling

# Transform your door scheduling processes.

With our freely-available EntriWorX BIM Plugin for AutoDesk Revit

EntriWorX BIM Plugin is the latest tool we've developed to enhance the 3D modelling process and optimize how you plan, specify and visualize access solutions. This user-friendly plugin makes it fast and easy to populate and update your BIM model. Using a variety of data formats, you can share floorplans with dormakaba experts, receive tailored specifications and update your project model as you go. So from specifications and drawings to wiring diagrams, you have up-to-date, precise data at your fingertips throughout the project.

## The benefits of EntriWorX BIM Plugin

Free application with user-friendly interface

No server resources required

Data transfer is secure, quick and lightweight

View all specified products in Revit

We do not require your project model

Complete ironmongery specification inside your model

# How it works

4 simple steps from download to update

1.

**Download** the EntriWorX BIM Plugin for Revit

3.

**Receive** a tailored hardware schedule or complete entrance systems specification

2.

**Export** door schedules and floor plans to a dormakaba specialist with one click

4.

**Update** your model with the supplied BIM data

### Keep your focus

While your dormakaba expert prepares the specification, you can keep working on your project model. Importantly, the imported specification doesn't increase your model size.

### Recognizable format

We can work with data provided in Excel, to develop specifications, drawings, wiring diagrams and other BIM modelling.

### Make hassle-free changes

Updates to your ironmongery specification happen seamlessly through the plugin, and opening changes in your model are instantly flagged to your dormakaba specifier for a quick turnaround.
