

EntriWorX Planner

New service for your door and access planning

What does the EntriWorX Planner offer at a glance?

Service: the comprehensive specification service for creating your door solutions.

Support: support with planning access solutions in your planned building.

Data: catalogue of tried and tested door solutions (including drawings, wiring diagrams and a list of components).

Clear display: graphical representation of the door solutions on your floor plans. Visualization of details, access and security zones.

Comprehensive information: detailed development of door solutions with component list, connection diagrams and visualizations.

Planning door and access solutions is a challenging task that requires a great deal of knowledge and experience.

dormakaba has developed new planning support software, a service specially provided for you by our experts.

This new specification software, the **EntriWorX Planner**, provides all the relevant data and improves the exchange between the relevant interfaces.

The technical and operational details of the design plans can be confirmed online and adapted if necessary, for instance, by security advisers, installers or by dormakaba itself with the **EntriWorX Planner**. This simplifies the execution planning for everyone.

The **EntriWorX Planner** also enables implementation that complies with standards and building regulations as well as offering functional and predefined door templates for easy planning. In addition,

the tool provides an overview of specifications during the building phase and also allows for flexible adaptations to the door solutions planned by the architects.

The door solution is integrated into the database of the **EntriWorX Planner** and is available for future projects after testing. This means you can benefit from door models that have already been planned and increase your productivity.

We support you with customized planning of door solutions using the EntriWorX Planner.

Performance features:

Planning

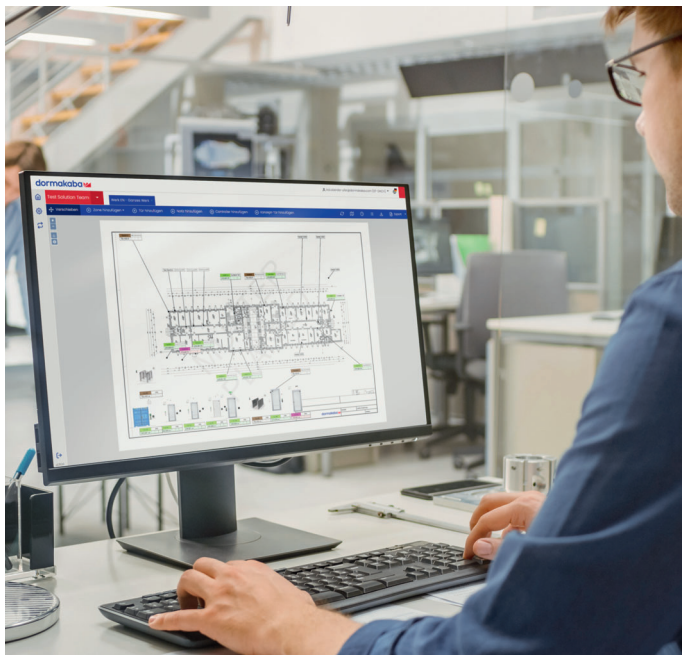

- Clear and comprehensible presentation of the planning.
- Completeness of planning data, all documents at a glance, circuit diagrams, installation handbooks and set-up videos are available.

Control

- For each piece of hardware, the coordinating instance for delivery, installation and commissioning is specified. Transparency about the installation process and commissioning data via the **EntriWorX Setup-App** and **Unit**.

Planning documents

- Exactly which components are used is specified for each door solution.
- Additional special elements for planning access controls can be configured.
- A wide range of output documents can be generated (tender documents, materials lists, project brochures, door data sheets, connection configurations, etc.)

Technical features:

Technology

- Web-based service, runs in any standard web browser.
- Server located in Germany (Frankfurt am Main).
- No additional hardware required.

Data exchange

- Distribution and access to planning documents via download link.
- Output documents: planning data can be forwarded to facility management (export formats: Excel, PDF, bill of materials, connecting diagrams).

EntriWorX EcoSystem

- Connection to further **EntriWorX planning tools** like **EntriWorX Planning 360°**.
