

EntriWorX BIM Plugin for Revit

Seamless door scheduling

For hassle - free door scheduling, connect with our experts.

EntriWorX BIM Plugin for Revit is our free, user-friendly tool that makes it fast, easy and secure to populate and update your BIM model.

"I can focus on all the design, installation and maintenance aspects of the project knowing that my dormakaba specialist is taking care of the specifications."

How it works

1.

Download the EntriWorX BIM Plugin for Revit

2.

Export door schedules and floor plans to a dormakaba specialist with one click

3.

Receive a tailored hardware schedule or complete entrance systems specification

4.

Update your model with the supplied BIM data

Why EntriWorX BIM Plugin?

Streamlined transfers

Transferring door schedules and floor plans is secure, quick and lightweight, with no server resources required or access to your project model – plus you can use a wide variety of data formats including text and excel.

Constant control

While your dormakaba specialist prepares the specification, you can keep developing your project model and your BIM model stays manageable as uploading specifications don't increase the size.

Complete visibility

You can view all your specified products in Revit and your complete ironmongery specification is automatically integrated into your model.

Easy updates

Updates to your ironmongery specification happen seamlessly through the plugin, and opening changes in your model are instantly flagged to your dormakaba expert for a quick turnaround.
