

TELUS Managed Azure

Maximize the value of your Microsoft Azure deployment with flexible managed cloud services from TELUS.

Microsoft Azure offers businesses with a flexible, on-demand and consumption-based platform to build, manage, and deploy applications on a massive global network. Due to its scalability, reliability and affordability, Azure appeals to organizations of all sizes as a cloud computing platform of choice, and has become a compelling alternative to traditional on-premise data centres.

However, with a wide range of available services and a constantly evolving platform, implementing and managing Azure can be challenging. A clear strategy is needed to identify the right workloads to be moved to Azure and to right-size the cloud infrastructure for optimal application performance and cost optimization. In addition, best practices must be implemented to improve business outcomes, lower consumption costs, reduce operational overhead and mitigate security risks.

TELUS Managed Azure lets you shift focus to your core business.

Whether you have already deployed Azure in your organization or are considering it, TELUS can help. As you move more workloads or applications to Azure, your cloud infrastructure expands, and managing it internally may prove to be a daunting task. Consumption costs can increase due to cloud sprawl and internal resources are stretched as demands for time, skills and the right tools continue to grow.

Let TELUS assume the ongoing management of your Azure platform, allowing your internal IT teams to work on other important business initiatives. TELUS Managed Azure helps you optimize your Azure deployment, save money with reduced consumption costs, and mitigate risk with data protection, recovery and compliance services.

We recognize that you may have multiple Azure services requiring varying levels of support, that's why TELUS offers two levels of Managed Azure.

Azure Essential Services

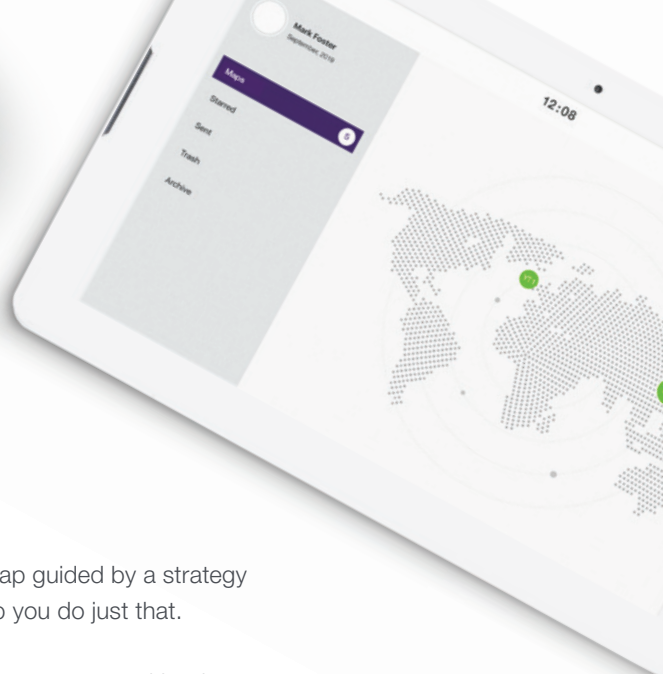

As-needed service to support your Azure cloud platform.

- Account setup
- Service familiarization / Onboarding service
- Infrastructure monitoring
- Service desk 8x5
- Incident management
- Security notifications
- Knowledgebase
- Site-to-site VPN
- Express Route
- Reporting

Azure Managed Operations

Complete, comprehensive management of your Azure cloud platform.

- All **Azure Essential Services**, plus
- Infrastructure management
 - OS patching
 - Identity and access management
 - Data protection
 - Network security
 - Threat protection & Anti-malware
 - Service desk 24x7
 - Backup management
 - Advanced reports

Complementary cloud advisory services to accelerate your Azure cloud adoption.

We believe that every cloud transformation requires a comprehensive roadmap guided by a strategy aligned with your business goals. TELUS Azure Cloud Advisory Services help you do just that.

Our experts will work with you to understand your business and IT needs, assess your workloads, evaluate cloud readiness, and plot a migration and deployment strategy for a successful and cost-effective transition to the Azure cloud platform.

Azure Readiness and Roadmap

Identify the right workloads to be migrated to Azure

Azure Infrastructure Design and Build

Design the optimal Azure services for your organization

Azure Migration

Transform and migrate applications and data safely to Azure

Azure Proof-of-concept

Test the proposed Azure deployment model before going to production

Partner with a leader in cloud and managed IT services.

- **Worry-free Azure management:** Proactive resolution, reliable performance and cost optimization with TELUS Azure experts managing your Azure platform.
- **Better Cloud architecture and governance:** Move to a best-practice approach to cloud architecture planning, implementation, migration, operation and optimization.
- **Secure, reliable connection to Azure:** Access Microsoft Azure data centres through a fast, reliable and secure connection delivered by **TELUS Secure Cloud Connect**.
- **Data protection and security:** Shift the responsibility of managing security, recovery and compliance to TELUS cloud and mitigate your operational risk.
- **Multi-cloud and Hybrid IT capabilities:** Optimize your workload placement with options to host them in TELUS-hosted Private Cloud or non-cloud IT infrastructure in addition to Azure.

Get the most from Azure with TELUS Managed Azure.
