

SmartCheck™

Digital Ear Scope

SmartCheck™ is a digital otoscope and companion app that helps caregivers capture and store eardrum recordings and share them with their healthcare provider to support facilitating care. Videos or series of still images can be shared in a variety of ways, including via email or health portal.

SmartCheck™ gives healthcare providers the ability to triage remotely, follow up on in-person appointments, or support their patients when an immediate in-person appointment is not possible. Not only does it provide pediatricians a new way to support their patients, but it can also help manage daily work flows for healthcare professionals.

Below are images of the SmartCheck™ Digital Ear Scope attached to a smartphone, along with images from the mobile app that the user will see while taking a recording of an eardrum. The app will guide the user through the process of safely taking a recording.

To learn more, visit the SmartCheck™ from Children's TYLENOL® site for healthcare professionals.
