# Brain Profiling

Ages 6 - 18+

Brain assessments to determine the individual's **thinking preferences** in terms of learning, subject choices, career and lifestyle.

## Description

Toniq Solva's Whole-Brain assessments operate within the Cognitive (Neuro-developmental) and Didactic (Learning) spheres to determine the individual's thinking preferences in terms of learning, subject choices, career and lifestyle.

The system is efficient, easy and scientifically based.

These impact lifestyle e.g. style of learning and communication, choice of career, attitude to health and wellness, problem-solving, relationship management, and much more. Students will be empowered by the knowledge (in practical terms) of how they learn optimally, which subject choices to make, and which career options are best for them. Students will thus gain self-confidence in how to study to succeed academically, have reduced anxiety about which study path/s to follow, and the self-assurance of which career path/s are best suited to them as individuals.

## Duration

Throughout school term (***Please note: Wednesdays and Fridays strictly by appointment only.***)

Scheduled according to assessment requested.

## Cost

R850 – R1150

Strictly upon payment before Assessment.

## Who can join?

Ages 6 - 18+

## Programme Requirements:

The programme relies on fast stable internet to upload student information and to generate the links of the assessments. Links are sent via email to the student.

## Students Responsibilities:

- Students are required to complete the assessment within 48 hours.
- Instructions will be relayed via the email containing the assessment link.
- Once complete they submit the assessment, following the prompts, online.
- If the link cannot be opened the student (or they can ask their parent/guardian) needs to inform the practitioner immediately.
- A new link will be supplied.
- The assessment should be finished independently to get a true profile.
