Sygnia Itrix S&P Global 1200 ESG ETF

A high-risk, passively managed index-tracking fund whose objective is to replicate the price and yield performance of the S&P Global 1200 ESG Index

Risk profile

Investment objective and strategy

The objective of the Sygnia Itrix S&P Global 1200 ESG ETF is to provide an investment vehicle for investors seeking long-term capital appreciation in tracking the performance of the benchmark S&P Global 1200 ESG Index (SPGESUP). To achieve this objective, the fund tracks the benchmark index as closely as practically and feasibly possible by buying securities that substantially make up the index at similar weighting as they are included in the Index. Whenever the Index gets rebalanced, the Portfolio will be rebalanced to align its holdings to that of the benchmark and to the extent that its performance will not deviate from its benchmark.

Risk profile

The fund has a 100% strategic allocation to global equities. The risk in the fund is managed by spreading investments across countries, sectors and individual shares, but the structure of the fund is dictated by the composition of the S&P Global 1200 ESG Index. The S&P Global 1200 ESG index is a subset of the S&P Global 1200 Index, designed to measure the performance of securities meeting sustainability criteria while maintaining the same overall industry group weights as the S&P Global 1200 Index.

Who should invest?

The Sygnia Itrix S&P Global 1200 ESG ETF has a high risk profile and is designed to track its benchmark as closely as possible by buying the constituent securities of the benchmark at similar weightings. It is a suitable investment for investors seeking higher returns, those willing to tolerate higher volatility and those aiming to maximise capital accumulation over the longer term. The investment is also suitable for investors who wish to maximise their returns in the most cost-effective manner without having to select asset managers or take on the risk of active and subjective investment decision-making processes.
