AA high-risk, actively managed equity portfolio

Risk profile

# Investment objective and strategy

The objective of the Sygnia Itrix FANG.AI Actively Managed ETF is to provide a simple vehicle to investors who wish to gain investment exposure to companies that use advanced technologies to acquire and retain users, including industry-disrupting technologies such as artificial intelligence, large language models, cloud storage, big data, social media and e-commerce tools. The holdings of this actively managed portfolio depend on a number of factors, including the underlying benchmark, the NYSE® FANG+™ Index (although the portfolio is not obliged to hold all the benchmark constituents).

## Risk profile

The fund has a high risk profile, as it is predominantly invested in global equities, which combine both equity market and currency risks. Furthermore, the fund invests specifically in companies involved in new and emerging technologies, which have a high degree of volatility. Risk is also high as the fund is a concentrated portfolio, with the fund's benchmark comprised of only ten shares. Effective exposure of the portfolio invested outside South Africa will always be above 80% and is affected by, among other factors, general market risk, exchange rate risk, interest rate risk, liquidity risk and legal and regulatory risk.

AMETFs may invest in foreign securities, which may be exposed to macroeconomic, settlement, political, tax, liquidity and foreign exchange risks. Performance is calculated for the portfolio, and individual investor performance may differ as a result of trading cost and price paid for investment share.
