Investment objective and strategy

The Sygnia Life MSCI World Plus Fund is an innovative and low-cost fund tailored to Sygnia living annuity investors, providing exposure to a diversified global equity portfolio. The fund is cognisant of the performance of the MSCI World Index, which includes large- and mid-cap companies from multiple developed markets worldwide.

Designed to meet the needs of living annuity investors, the fund offers access to diversified exposure of global equities. The strategy allows investors to capture the growth potential of developed markets, providing living annuity investors with an effective way to grow their wealth. The fund uses derivatives to boost its returns by adding extra income from South African money market investments, compared to holding overnight cash. This helps increase the overall return beyond what the underlying market provides.

The Sygnia Life MSCI World Plus Fund offers a cost-effective way for living annuity investors to diversify their portfolios and access global equity markets, with a focus on long-term growth.

Risk profile

The Sygnia Life MSCI World Plus Fund is a high-risk fund that invests in global equities across developed markets. The strategy faces two additional risks beyond the underlying market volatility. The risk that money market investments might underperform and the risk that the companies issuing derivatives might default. The first is mitigated with diversification and highly rated money market investments while the second risk is mitigated by regular mark to market of the positions. The fund aims to provide returns in line with the MSCI World Index.

Who should invest?

Long-term living annuity investors seeking to maximise their offshore equity exposure while adhering to regulatory guidelines.

Fees

Initial Fees	0.00%
Management Fees	0.50% per annum
VAT	-
Total Expense Ratio (TER)	-
Transaction Costs (TC)	-
Total Investment Charge (TIC)	-

Sygnia charges an annual management fee, calculated and accrued daily and payable monthly in arrears.

A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs.

TCs are a necessary cost in administering the financial product and impact financial product returns. TCs should not be considered in isolation, as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER.
