

Cartus Destination Services

DIGITAL ENVIRONMENT

In order for relocating employees to be successful and productive in their new position, it is critical that your employees and their families find a suitable home and are settled in the host location as quickly as possible.

As your destination services provider, we will support your employee through the relocation process, ensuring they settle in efficiently and seamlessly. Our local Cartus team will share and streamline market information and source suitable properties, processing documentation in a secure and compliant manner.

As part of Cartus' continued commitment to digitalization and innovation, our online platform offers a 24/7 digital experience for our destination services programs in Singapore and China, including Hong Kong in partnership with RelocationOnline. Paired with local expertise and personal guidance from an appointed Cartus consultant, our new digital environment offers:

a single and organized solution to access key information on the host location

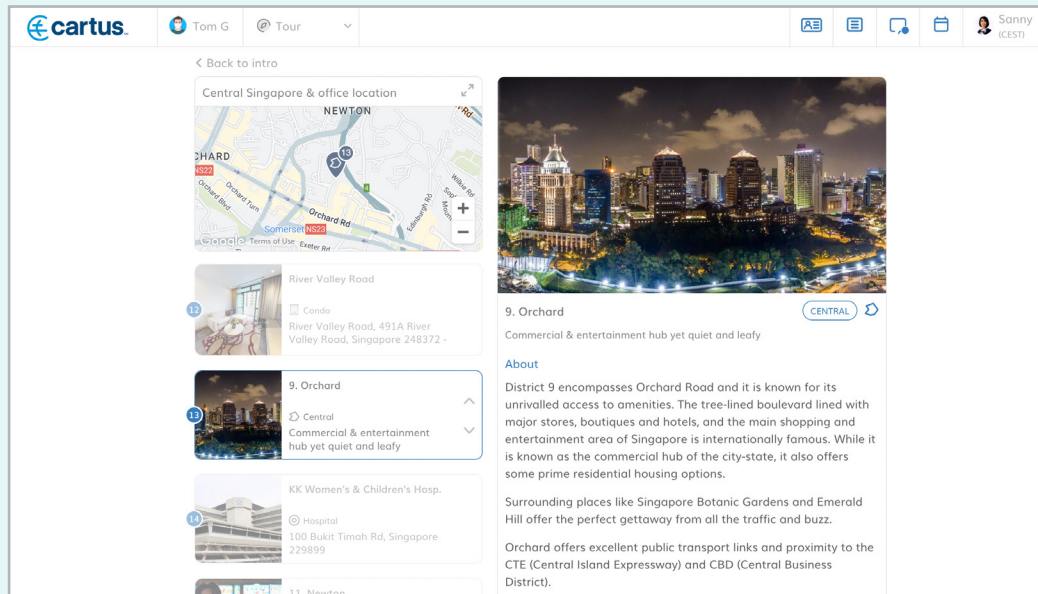

seamless collaboration and real-time updates throughout the home-finding process

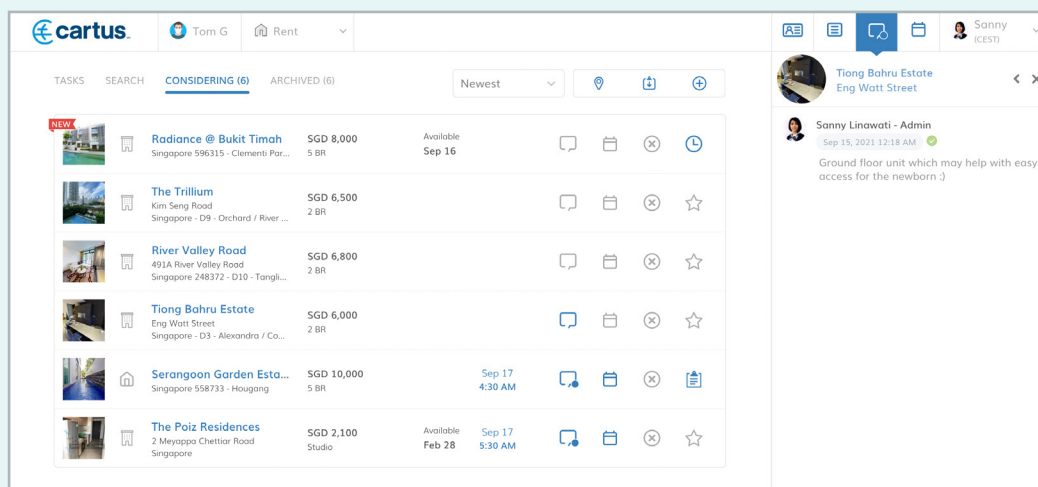

instant communication between your employee, the Cartus consultant, and our local supplier partner

MODERN COMMUNICATION PLATFORM

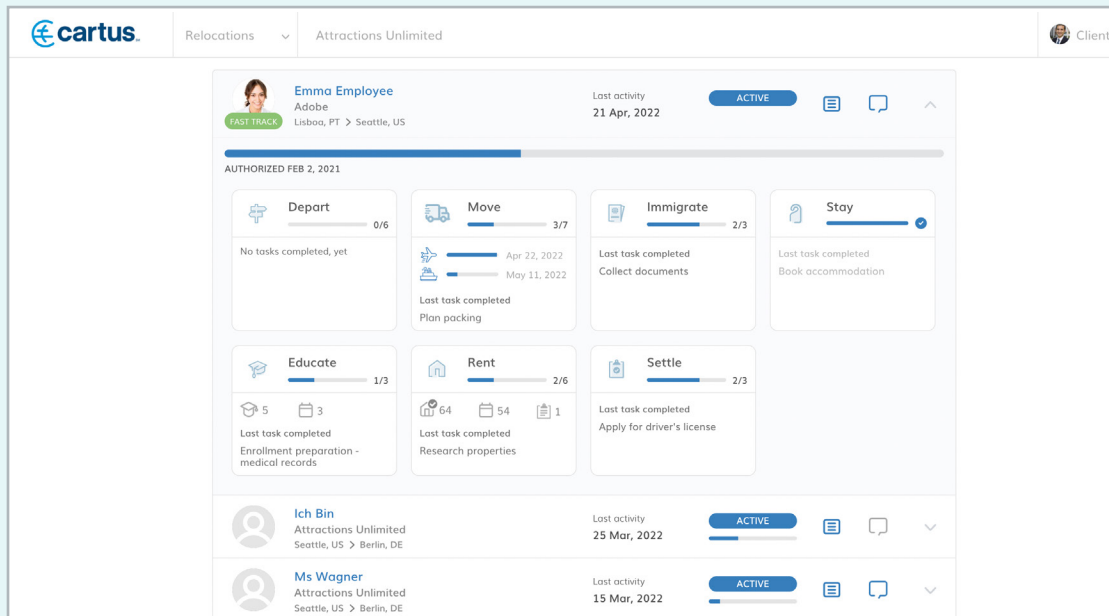

Instead of using numerous emails and communication channels, all information required for the relocation can be easily accessed and uploaded to one single platform. Area information, milestones, and communications are captured here in real-time and can be accessed on any device.

Customized Virtual Tours of the Destination

Organized Home-finding and Communications

HR View: Real-time Tracking of Your Employees' Service Status

DATA SECURITY AND PRIVACY COMPLIANCE

The platform is ISO 27001 and SOC1/2 certified, and all data received and captured is encrypted. Restricting personal data to the platform, in place of emails and document attachments, meets more robust and stringent compliance, security, and data privacy regulations.

Cartus' destination services digital environment will be available in Singapore and China, including Hong Kong.
