

Policy on Genetically Modified Foods

The safety, wholesomeness and nutritional value of our products are of paramount importance to Lactalis and are emphasised in the company Quality Policy. Our policy is to be in complete compliance with National, State and Territory Food Standards.

In relation to genetically engineered or genetically modified (GE/GM) materials, Lactalis's policy is to avoid their use whenever possible.

Accordingly, we require from all our suppliers, warranties in regard to the GE/GM status of ingredients and additives.

Ingredients	All ingredients including fruit juices and other non-soy based ingredients are non-GE/GM.
Lactalis Milk Supply	Our preference is that farmers supplying milk direct to Lactalis avoid GE/GM feed for their cows and the Lactalis farm quality system requires that they seek warranties from their suppliers of compounded feeds when in doubt.
3 rd Party Milk Supply Milk Ingredients Contract Packing	Each business partner warrants that the overall stock feed ration used on their supplier's farms is either non-GE/GM or would contain only insignificant levels.
Soy	Soy beans used are from non-GE/GM soy beans controlled under a strict "Identity Preservation" system. Our soy bean suppliers have warranted to contain any inadvertent trace contamination to an absolute minimum. Other ingredients used in our soy products are non-GE/GM.

Our business is based on respect for our consumers and their diverse views and preferences. Our policies and procedures are designed to reflect this.
